Lancaster Farming

Vol. 30 No. 16 | Five Sections | Lancaster Farming, Saturday, February 23, 1985 | $7.50 per Year

Plushanski Jetson Fanjetta - ET was the top purchase at the 1985 Pennsylvania Holstein Convention Sale, held Thursday in Philadelphia. The heifer sold for $45,000 to Paul Hervochon, New Berlin, N.Y.

$45,000 Plushanski heifer tops PHA Convention Sale

BY WENDY WEHR

PHILADELPHIA — While city newsmen's cameras clicked and television cameras whirred, a Plushanski Job Fancy daughter easily earned the highest bid of the day at the Pennsylvania Holstein Convention sale on Thursday in Philadelphia. Paul Hervochon of New Berlin, N.Y., succeeded in placing the final bid of $45,000 on Plushanski Jetson Fanjetta - ET.

As first consignment through the sale ring, the Plushanski heifer received lots of attention from Holstein breeders and city news media alike. Curious about a prestigious Holstein cow sale being held in the city's Adam's Mark Hotel, Philadelphia newsmen were on the scene to record the event, while the Holstein breeders examined and purchased the quality consignments of the convention sale.

Offered by Plushanski Farms, Inc., of Kutztown, Fanjetta - ET is a Jetson daughter out of Fancy, a high-producing daughter of the Faith cow. With a state-wide record for protein production, Fancy also has surpassed 1500 pounds of fat as both a 3- and 4-year-old.

Looking to these outstanding records, Horace Backus didn't hesitate in proclaiming, "This is perhaps the greatest high test cow family in the breed today," as the heifer circled the sale ring.

The Fancy cow also boasts an index of +1515M and +$265. Fanjetta's maternal sister, Fantasia - ET topped the 1983 All-American at $30,000.

Also bringing a hefty bid was Art-Acres Kay J - ET, a 3-year-old consigned by Larry Wenger, Lancaster. The gavel came down at $30,000, second high bid of the sale, for the Valiant daughter out of Art-Acres Elevation Kay. Kay J was purchased by Bruce and Dorothy M. Dudley and Brent Apotheker, Glen Mills.

Sold with contract interest, Kay

Poultry group opposes federal "user's fees"

BY JAMES H. EVERHART

HARRISBURG — The Pennsylvania Poultry Federation is mounting a campaign opposing a Reagan Administration proposal that would force meat packers and processors to pay for federal meat inspection programs.

The Administration proposal would gradually phase in user fees to support the entire cost of the meat inspection program, which will cost an estimated $362.2 million in fiscal 1985.

Budget projections call for a decrease to $230.6 million in fiscal year 1987, and a $115.2 million outlay in 1988.

Under the administration plan, the government would charge meat packers and processors for the services of the federal inspectors who work in their plants. The plants would be assessed an hourly rate that covers office expenses, fringe benefits and travel costs as well as salaries.

For some of the plants in central Pennsylvania, the measure could require annual expenditures of several hundred thousand dollars, according to Tim Allwein, director of membership service for the state poultry group.

His group opposes the measure, he says, because the inspections are designed to benefit consumers. Thus, unlike other user fee-type arrangements, it is not primarily an exercise of federal regulation that is required for the benefit of the industry.

In addition, he says, his group

Smart pigs save money says Pa. Pork Congress speaker Curtis

BY JACK HUBLEY

HARRISBURG — Pork producers who think they know more about heating their confinement buildings than the pigs do are in for a surprise, according to the University of Illinois' Dr. Stan Curtis.

Reporting his research findings at Thursday's Keystone Pork Congress held at the Penn Harris Motor Inn in Harrisburg, the animal science professor noted that porkers are quite capable of regulating their environment when given the chance.

Using operant conditioning techniques, (animals are taught to manipulate something in order to receive a reward) Illinois researchers taught pigs to push a paddle, which in turn triggered a microswitch that turned on an infrared heat lamp for eight-minute intervals

Pigs so instructed would consistently maintain nursery temperatures near 80 degrees during the day, and about 60 degrees at night. Also interesting was the fact that an individual pig would handle all of the button pushing for four to six hours at a time before handing the job to a pen mate.

To test the theory that pigs pushed the paddle more frequently

Citicorp aids NEDCO

One of the nation's largest banking institutions, Citicorp, has extended a $6 million line of credit to the ailing Northeast Dairy Cooperative Federation.

The fresh infusion of credit follow reports of problems with cash flow, a price war and member unrest at the federation.

For more on the NEDCO-Citicorp matchup, turn to page 10

Tobacco auction

Will low tobacco prices lead to a new marketing system for Pa.?

See page A24 for a report on last Friday's tobacco marketing meeting at the Guernsey Barn in Lancaster

Producers who did not fill out a questionnaire at the meeting are encouraged to answer the questions accompanying the article

Eastern Pa. & N.J. Poultry

Wednesday, February 20
Report supplied by USDA

Market Comment: Prices were relatively unchanged but trended to show slight weakness for next week's commitment. Trading continued light and offerings were short of maintaining full processing schedules but in better balance with a declining demand.

Prices Paid at Farm:

Light Type Hens: 9½-10¼, mostly 9¾.

F.O.B. Plant: 12-13¼, mostly 12½.

Philadelphia Eggs

Thursday, February 21
Report supplied by USDA

Market Comment: Prices unchanged. Market tone continued to show improvement, but local sentiment remained mixed and mostly steady. Cartoned egg orders light to moderate. While sufficient to keep some seller stocks in decent balance, others were in active search of outlets and grade large and extra large, particularly in loose packs. Mediums adequate though closely cleared in many instances. Jumbo and small sizes tight. Nest runs offerings were adequate to light and held with increased confidence, particularly classes yielding lighter weight eggs.

Prices to retailers: sales to volume buyers, consumer grades white eggs in cartons delivered store door:

A Extra Large 56-58; A Large 55-57; A Medium 49-51.

Delmarva Poultry

Thursday, February 21
Report supplied by USDA

Market Comment: Ready to work movement on both whole birds and parts was slow. Offerings remained ample and often failed to clear without sharp price cutting. Whole birds, legs and wings were the weakest items, but breasts were just steady at best. Less than truck lot whole bird asking prices ranged .48-.57. Slaughter schedules were reduced where possible but remained moderate overall. Live supplies were adequate at desirable to lightweights. Undertone barely steady to weak.

Today's L.T.L. asking prices on U.S. Grade A are at .48-.57 cents.

Estimated slaughter of broiler fryers in Delmarva (000).

Estimated 2/21 1,790,000; Actual 2/14 1,689,000; Actual 2/19 1,837,000; Average Weights 2/19 4.27; Average Weights 2/12 4.23.

Peoria Cattle

Thursday, February 21
Report supplied by USDA

Trading slow this week on rather light receipts as an uncertain dressed beef market and most cattle carrying mud caused slaughter steer prices to close mostly 1.00 lower with heifer prices declining .50 to 1.00. Bulk of receipts Monday with very few cattle arriving Wednesday. Cows mostly 3.00 to 4.00 lower. Bulls generally steady, supply mainly Good and Low Choice Slaughter Steers with 12% Cows. Receipts this week about 1500 as compared to 969 a week ago and 1271 a year ago.

SLAUGHTER STEERS: Choice 2-4 1050-1200 lbs. 64.00-64.50, few Wednesday 63.00-63.50; 900-1050 lbs. 62.50-64.00. Mixed Good and Choice 2-3 900-1100 lbs. 60.00-63.00. Good 2-3 900-1050 lbs. 56.00-60.00.

Citicorp extends $6 Million in credit to beleaguered NEDCO

BY JAMES H. EVERHART

SYRACUSE, N.Y. — Citicorp, one of the nation's largest financial institutions, has come to the aid of the Northeast Dairy Cooperative Federation, officials said.

The Cincinnati-based banking concern has extended a $6 million line of credit to NEDCO, which has been rocked by problems with cash flow, member dissatisfaction and a price war in upstate New York.

The action also comes on the heels of a $1.50 per hundredweight assessment levied by the federation earlier this month. The assessment, which averages out to 8.3 cents per hundredweight for all milk delivered over the past year, is the first such assessment in nine months.

NEDCO's new credit arrangement is its first relationship with Citicorp. The association was not able to reach a similar agreement with its current creditor, Irving Trust of New York.

"Our current credit line was simply too low for the volume of business NEDCO is doing," the federation's Chief Executive Officer Dean McCormac, said in a prepared press release. "This, coupled with operating losses, has added to the problem by gradually reducing the amount of cash available to us."

The firm's cash flow situation resulted in the return of several checks recently, NEDCO information director Calvin Cobb said. He was not able to provide the exact number or amount of the overdrafts, but said all the checks have now been presented again, and have been honored.

The company, which has $300 million in annual sales and a capital reserve equity base of $7 million, has been rocked by a price war over the past 18 months.

In addition to the price war, NEDCO was forced to contend with shortages of certain grades, which forced the federation to purchase milk on the spot market — at inflated prices — in order to satisfy long-term contracts.

Member disgruntlement over the financial instability has resulted in a flurry of complaints, including several threatened withdrawals from the organization, Cobb said.

The federation is hoping that those groups that have threatened to withdraw will reconsider before their memberships are terminated March 31, he added.

"Things will right themselves sooner or later, as they do in business," Cobb said, adding that he was convinced that the federation is now on a firm financial footing.

NEDCO has 2,700 members, including 600 in Pennsylvania.

NOW IS THE TIME

To Demand Health Papers

A healthy herd or flock is very important to all livestock, dairy and poultry producers. Many farmers have been very successful in developing healthy animals until they bought a new addition. Then the trouble started. This is so true in many cases that we cannot stress strongly enough to be very careful when buying animals. Too many farmers have "bought disease" when they brought new animals to the farm. This is very easy to do, especially when purchases are made several times each year. Close attention to the source of the animal or animals, is very important. Our current swine infection situation is hard to control and eliminate because of the large number of feeder pigs coming into the area each week. More care in buying and the insistance of authorized health papers needs more attention.

To Consider Topdressing Wheat

At this time, we are not certain how our wheat crop will survive the winter elements because we still have March to contend with. And March, with its freezing and thawing conditions is one of the hardest months on wheat.

In any event, topdressing wheat with nitrogen will generally result in an extra 10 to 12 bushels per acre. This can result in extra profit to the grower.

The ideal time to topdress wheat is just when it begins to "green-up" in the spring. This will generally occur in the middle or latter part of March. However, wheat can successfully be top-dressed earlier in March when the ground is "honeycombed". Be cautious of highly fertile land that has received a lot of manure in the past. This kind of land does not need additional nitrogen.

Most wheat varieties can use between 40 and 50 pounds per acre of nitrogen. There are few activities around the farm that can return more profit with less input, than topdressing wheat with nitrogen.

To Store Supplies Safely

Many farmers have purchased and accepted early delivery on seeds, fertilizer and other supplies. Proper storage of these items is important. I have seen bags of fertilizer stored too close to a barn door, or to an open window; the same with farm seeds. Extra moisture on these materials, or under them on a damp floor, can cause problems. Also, it is very important to keep seeds away from chemical weed killers. These herbicides may reduce, or kill, the germination of the seeds. Also, children, pets and livestock should not have access to stored seeds or farm chemicals. All of these materials become more expensive each year. It's only good management to store them carefully.

To Prepare For Dormant Sprays

Many types of trees are infested with various kinds of scale insects. These pests attach themselves to the bark and twigs of trees and shrubs and suck strength from the plant. One of the best treatments is to apply a dormant spray oil before the buds start to open. The date of the spray will vary with the weather. However, on many fruit trees and shrubbery this will be late February and early March. The spray should be applied before the buds open. In addition, a spray during May or June while the insect is in the crawler stage is strongly suggested; materials can be Malathion or Sevin. Scale insects should be controlled – the way is to use a dormant spray.

The Extension Service is an affirmative action, equal opportunity educational institution.

Celery Meeting

LANCASTER — Penn State specialists will be on hand to conduct the program at the Regional Celery Growers Meeting at 7:30 p.m. Wednesday at the Farm and Home Center.

Alan MacNab will discuss celery diseases, Pete Ferretti will talk about cultural needs and Ernie Bergman will comment on seed and nutrition.

THE BIBLE SPEAKS
BY LAWRENCE W. ALTHOUSE

SOME SAID IT THUNDERED
February 24, 1985

Background Scripture:
John 12.
Devotional Reading:
John 12:44-50

There is not much time left for Jesus. In a few short hours his ministry will come to a close and there will be begun those terrible events that lead to a cross on Golgotha.

Jesus moves toward those final hours with a deep sense of commitment, but not without a struggle inside himself. On the one hand, he knows that death cannot keep him from being vindicated. In fact, although neither he nor his Father are seeking that death, still he knows that through it he will emerge triumphant: "Unless a grain of wheat falls into the earth and dies, it remains alone, but if it dies, it bears much fruit" (12:24).

SAVE ME!

On the other hand, his inapt human sense of self-preservation tempts him to call upon God to save me from this hour." He did not seek this martyr's death, but neither would he turn from it No, for this purpose I have come to this hour" (12:27).

In answer to his petition to Glorify my name," God has a voice speak from heaven. "I Have glorified it, and I will glorify it again." Here was divine confirmation of Jesus and his mission.

But not everyone understands this heavenly voice. Some believe that "an angel has spoken to him," but others disagree about what they heard and said instead "that it had thundered" (12:29). Although there is a considerable difference between a heavenly voice and a clap of thunder, it is interesting to note that not all who witnes greed on what had happened.

I am reminded of the two who heard Jascha Heifitz play the Brahms Violin Concerto. One of them described the performance as a magnificant musical event, but the other termed it merely 'some strands of horsehair scratching over catgut." Both were accurate descriptions and both depended upon the person's perspective.

PERSPECTIVE

And so it is with almost everything in life: what you see is pretty dependent upon your perspective. Some will hear heavenly voices, while others will say simply that it thundered. Some will experience the resurrected Lord, while others will be quite unaware of his presence. Thus, some people can see the cross as a link to continuing life, or as a one-way street to shame and humiliation.

Jesus could have focused on the tragedy of the cross that was waiting for him. Instead, he chose to concentrate on what he could accomplish even through crucifixion. "I, when I am lifted up from the earth, will draw all men to myself" (12.32). Jesus sees the cross as an opportunity to reach people for God even in his death.

In our world today, God continues to glorify Jesus. It should not disturb us that, while some hear that heavenly voice clearly, others will maintain that it thundered'.

"My 120 beat the rest."

Just look at this alfalfa. Leafy...fine-stemmed ...the best alfalfa there is. That's not just the seed dealer in me talking. I got this proof right out of my own fields.

University tests also proved 120 is the best. You just can't get better tonnage than this. Or protein. And my 120 beat the others in fast starts, winterhardiness, longevity and regrowth, too. You need that kind of performance whether you feed it or sell it.

Why not ask your own DEKALB-PFIZER dealer about 120. Then compare it with what you're growing. You'll see how this 120 beats the rest.

Maryland's '84 farm output sets three records

Agriculture in Maryland served up quite a 1984 birthday present to help celebrate the state's 350th Anniversary; it set all-time production records in three of its leading sectors: corn, soybeans and broiler chickens!

According to the latest estimates of the Maryland-Delaware Crop Reporting Service, corn production in 1984 was 69,620,000 bushels breaking the earlier mark set in 1981 and soybean production was 12,325,000 bushels breaking a record that had been set in 1982.

Corn and soybeans are the number one and two leading field crops in the state and are the feed mainstay of Maryland's number one commodity: broiler chickens. The production of broiler chickens in Maryland last year is also estimated to be a record breaker at 275 million plump, 4.1 pound chickens.

Previous high for Maryland production of broilers was 267 million birds in 1982.

Maryland's broiler production is part of the Delmarva poultry complex, which as a whole, saw production of 483 million birds, up from 468 million in 1983. At today's feeding rates, it takes about 8 pounds of corn and soybean ration to produce a broiler chicken.

Thus, the poultry industry on Delmarva used about 3.8 billion pounds of corn and soybeans to produce its huge chicken crop in 1984.

The 1984 production rebound in Maryland is particularly noteworthy in that it came on the heels of drought-ravaged 1983 which saw some of the worst growing conditions in 50 years with greatly reduced corn and soybean production and an extremely poor quality tobacco crop.

Another record-breaker in 1984 was barley production at 5.5 million bushels shattering a record that had stood since 1969.

Other segments of Maryland agriculture showing strong production rates in 1984 include:

- Dairy - production of about 1.5 billion pounds of milk. The dairy industry is Maryland's second most important segment when it comes to cash value in agriculture.
- Wheat - production of over 6 million bushels in 1984 for one of the larger outputs in the state's recent history.
- Tobacco - the state's first cash crop, is estimated at 31.2 million pounds, an average size crop. However, planters report that the 1984 leaf is of exceptional quality, of good color and very thin leaf making it one of the best crops of recent years.
- Hogs - the 1984 pig crop came in at 417,000 pigs.
- Mushrooms - 2,146,000 pounds.
- Fresh market vegetables - mainly tomatoes, with a production of 28.8 million pounds, or 14,400 tons.
- Processing Vegetables - 119,990 tons breaking out as 48,640 tons of sweet corn, 4,080 tons of peas and 52,580 tons of tomatoes.

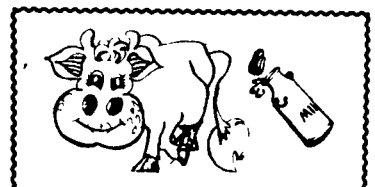
These numbers are particularly more impressive when compared in terms of percentages against 1983.

A few examples in the crop areas show that corn production was up by 81% over 1983! Soybean production was up by about 20%, tobacco production by 5%, wheat up by 6%, barley up by 11%, processing vegetables by about 37%, fresh market vegetable production by about 9%, apple production up by about 7%.

One Maryland crop, however, was literally 'nipped' by weather in 1984. That was the peach crop which came in at about 18 million pounds, down about 14% due to a hard freeze.

The production increase for broiler chickens is believed to be up by about 5% representing a truly remarkable rate of growth for a single year. Dairy production was off somewhat by about 5% reflecting impact on Maryland of industry and government programs to reduce surplus production.

One conclusion to be drawn from the outstanding production rebound of Maryland agriculture in 1984 from the disasters of 1983 is that agriculture is truly a "modern miracle" in that it responds quickly to good weather for crops and improved markets for livestock.



Federal user's fees

(Continued from Page A1)

supports a separate cost-cutting measure called "less-than-continuous-inspection," which would allow inspectors to review plants randomly without requiring that each piece of meat be viewed individually.

Inspectors could still see half of the company's product, which would be a "pretty good indication that a company's entire production line was pretty wholesome," Allwein said.

The poultry group, he added, will be lobbying actively with the state's congressional delegation, attempting to find support for their proposal.

He noted that Sen. Arlen Specter had seemed especially persuaded by the group's contention that the measure would cost the state jobs — because of packers' attempts to offset costs incurred by the new program.

Although no other state organizations seemed to be taking on the leadership in fighting the measure, several individuals and companies spoke out against the proposed fee arrangement.

Ben Burkholder, a vice president at Victor F. Weaver in New Holland, said his firm would make its case through the poultry federation and other national organizations.

He did note, however, that his company, with about 18 federal inspectors on site, would eventually face costs of as much as $700,000 annually for the inspection program.

Costs at the Hatfield Packing plant in Montgomery County, on the other hand, could surpass $1,000 a day, said Executive Vice President "Butch" Clemens.

And, he said, the inspectors hired by the feds are not the kind of people he'd hire in his own organization.

"Our own quality control people find a lot of things they never see," Clemens said. With $130 million in annual sales, Hatfield employs 700 workers and slaughters more than 3,500 hogs daily.

Officials at the Pennsylvania Livestock Association and the Pennsylvania Pork Producers Council both say their organizations have adopted a "wait-and-see" posture on the new proposal.

"I guess a lot of people aren't paying attention because it's been discussed before," said John Henkel, President of the Pennsylvania Livestock Association.

He added that he doubted the public would accept an inspection program that is financially supported by the producers themselves.

The thought was echoed by Herb Schick, secretary-treasurer of the Pennsylvania Pork Producers Council.

"Will the consumer have faith in this kind of set-up?" Schick asked.

Livestock producers themselves had little to say about the legislation. But at least one felt uneasy.

"'Invariably," he said, "we'll pay for it. You don't think the packers and processors aren't going to pass along some of those costs to us, do you?"

Apple Market

Tuesday, February 19

Good Morning. The market is gaining strength on an overall basis throughout most of the state and prices have been holding steady. Supplies are firm with more controlled atmosphere storage apples on the market each week. Most growers who still have apples to sell are very confident about this market and this is a healthy sign.

Prices quoted are wholesale, truckload, F.O.B. at the orchard or packing house.

Regular Cold Storage Bagged Apples - Cartons, 12/3#, 2¼" up. Red Delicious U.S. Extra Fancy 7.50; U.S. Fancy 7.25. Golden Delicious U.S. Fancy 6.25. Omaha Cattle

Thursday, February 21
Report supplied by USDA

Slaughter Steer and Heifer prices trended .50-.75 lower this week, with some closing levels at the lowest point since November 1984. Most downward pressure came from an uncertain beef trade which declined on the carcass side while improving on the boxed items. Overall finish continued fair and mud an ongoing problem. Slaughter Cows 1.00 lower. Bulls steady.

Estimated 5 day receipts 8200, actuals last week 6736 and last year 7382. Steers comprised 40 pct. of the week's receipts, Heifers 42 pct., Cows 11 pct., Feeders 6 pct.

SLAUGHTER STEERS: At the close, load Choice and Prime 3-4 near 1225 lbs. 64.00. Choice 2-4 1050-1300 lbs. 63.00-64.00; load muddy Choice 2-4 1350 lbs. 62.25. Mixed Good and Choice 2-3 1000-1150 lbs. 62.00-63.00. Good 60.00-61.50.

SLAUGHTER HEIFERS: Choice 2-4 950-1075 lbs. 61.00-62.00, upper half of Choice grade poorly tested. Mixed Good and Choice 2-3 900-1050 lbs. 60.50-61.50. Good 58.00-60.50.

Average of LS 214 detailed quotations for 900-1100 lb. Choice Steers 62.60, 1100-1300 lbs. 63.35. Average cost Steers 63.08, average weight 1188 lbs.; as compared 62.73 and 1192 lbs. a week ago. Average cost Heifers 61.03, average weight 1057 lbs, as compared 61.50 and 1038 lbs. a week ago.

SLAUGHTER COWS: Cutter and Boning Utility 1-2 39.00-42.50, high dressing to 44.00. Canner and low Cutter 36.50-39.00.

SLAUGHTER BULLS: 1-2 1350-2000 lbs. 46.00-53.00, few lot dressing to 43.00.

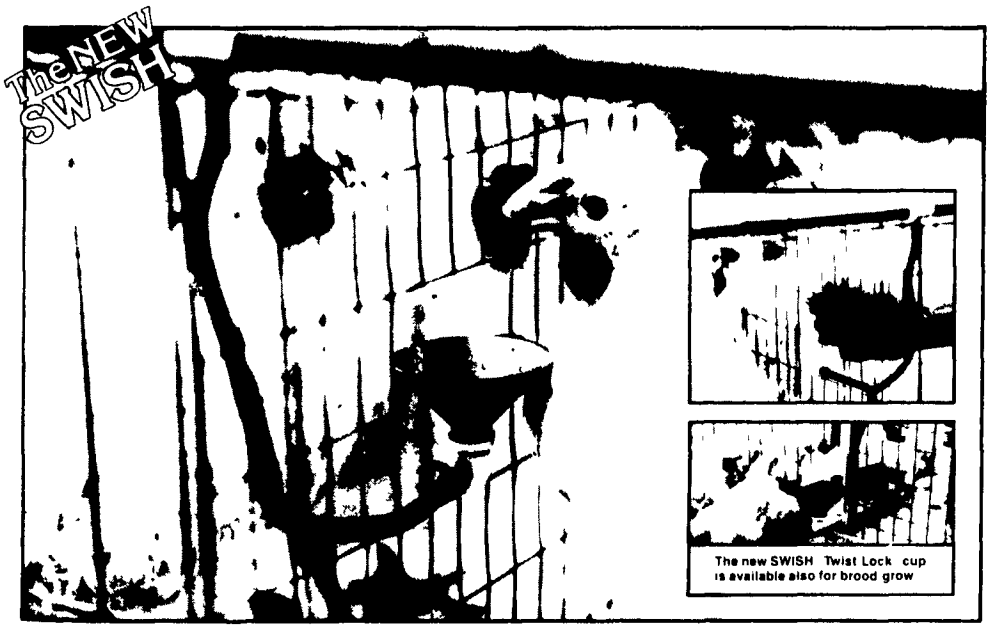
"Twist-Lock" cups: newest innovation from the new leader



...another reason SWISH saves you more labor, more birds, and more money

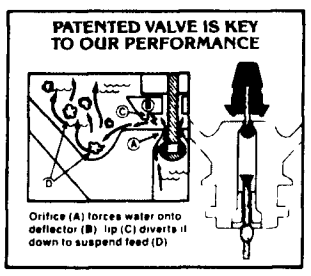
The newest twist in cage watering makes cup cleaning and maintenance a real snap it s SWISH s Twist-Lock' cups for cage layers and brood-grow watering systems

Saves labor. No more contortions with hand tools inside a cage – one simple twist of the wrist unlocks and removes the unitized cup and valve It s that easy to maintain when necessary

But with SWISH, it s hardly ever necessary That s because our cup is self-cleaning Our patented valve keeps the cup clean by flushing any feed particles out so birds can consume them with the water

Installation is a snap too with SWISH s new cups they simply snap into the desired location, and the hose attaches to the water line outlet These are some of the ways SWISH s new cup saves you labor – easy installation, low maintenance, and labor savings between flocks because our cup constantly cleans itself

PATENTED VALVE IS KEY TO OUR PERFORMANCE



Orifice (A) forces water onto deflector (B) lip (C) diverts it down to suspend feed (D)

Helps save more birds. Because our cup is self-cleaning, algae and bacteria growth is not a problem as with cups that don t flush out feed particles Clean cups mean less chance of disease and less mortality And our big cup means good access to water for a good level of bird health

SWISH saves you money. That s the bottom line with a system that cuts labor and keeps birds alive and productive

Get all the facts about our new cup and other SWISH innovations See your SWISH distributor or contact us

The NEW SWISH – total commitment to quality & service

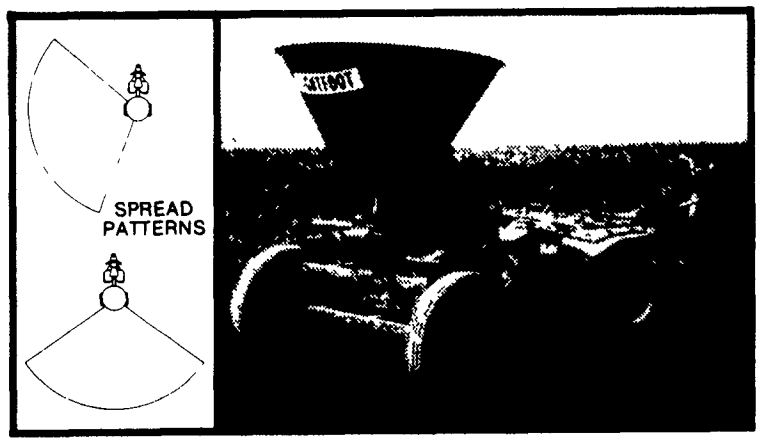
LIGHTFOOT

BROADCAST SEEDER & FERTILIZER SPREADER



MODEL DB1120 SPECIFICATIONS

★ HOPPER CAPACITY—8 Bushel or Up To 900 lbs.
★ GROUND DRIVEN
★ SPREADING WIDTH—Adjustable From 15 to 50 Feet
★ OVERALL HEIGHT—63" / WIDTH—58"
LENGTH—77" / WEIGHT—320 lbs.
★ VARIOUS MODELS AVAILABLE

Ideal for early spring and fall seeding and fertilizer spreading. Pulled by an ATV/3—wheeler, it will eliminate cutting ruts in your field that might have occurred if heavy equipment had been used...NO YIELD LOSS FROM SOIL COMPACTION.

FEEDER PIGS: No established market.

SHEEP: 14. One lot Choice 85 lb. new crop lambs at 70.50.

Finding the right plant population

NEWARK, Del. – An increasing amount of pickle acreage on the Delmarva peninsula is now being harvested using a once-over, destructive mechanical harvest operation. This practice uses gynoecious hybreds (which produce predominantly female flowers) planted at high populations to produce higher yields maturing at a single time. The big question is, what plant population produces the best yield?

Last summer University of Delaware extension vegetable specialist Ed Kee established demonstration plots at the university's Georgetown substation to evaluate pickle performance at three population levels. Three varieties were planted – Regal, Calypso and Flurry – at populations of 52,000, 65,000 and 88,000 plants per acre. Each plot started with 100,000 plants and was hand-thinned to the desired population.

Yields for each variety were highest at 65,000 plants per acre. At that level, yields averaged 329 bushels an acre versus 254 bushels at a plant population of 88,000, and 212 bushels at 52,000.

According to Kee, these responses appeared to result from the relationship between number of plants per acre, and fruit per plant. At the 52,000 and 65,000 populations, each plant produced an average of two fruits, as compared to only 1.4 fruits per plant at the highest population. "Yields increased at the 65,000 over the 52,000 level simply because there were more plants," the specialist says. "But at the 88,000 level, plants had too much competition and each produced less fruit, so yields were down."

As for varietal performance, Regal out-yielded both Calypso and Flurry at each population and when averaged across all population levels. At 65,000 plants per acre, Regal was the highest yielding treatment in the experiment.

During the 1984 growing season Kee conducted two other pickle studies at the Georgetown substation. One checked the effectiveness of the growth regulator, "Burst" – a cytokinen material which theoretically can increase yields. However, he saw no response in either handpicked, multiple harvest or machine harvest trials.

In the second study, the specialist evaluated 40 pickle varieties in a spring planting, and a smaller, similar trial harvested in September. "Although many of the varieties we looked at are experimental and not yet commercially available," he reports, "some promising lines are coming along." Regal was one of the leaders in both trials, with Calypso another good producer among named varieties.

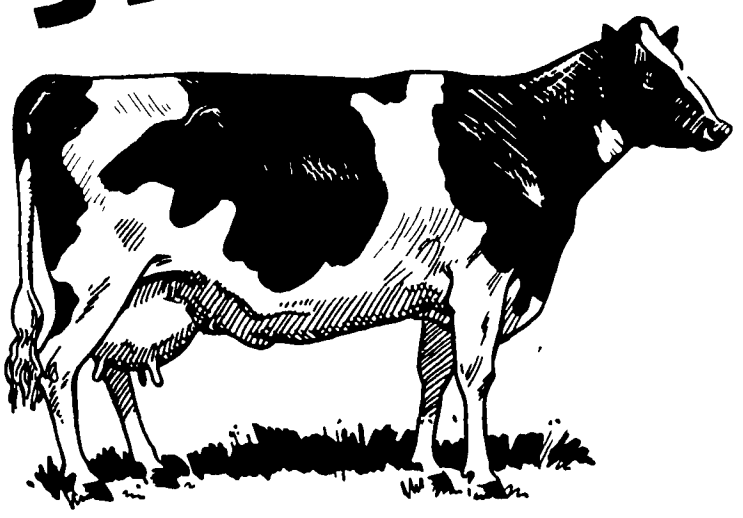
High Quality Protein

Amaranth seeds, used in some developing countries to make flour or powder for drinks, are safe and nutritious sources of protein. Botanists at the University of Maryland have determined that one vegetable form of the amaranth plant contains as much as 13% protein and large amounts of amino acid lysine – a critical component not usually found in plant proteins. They also found virtually no cholesterol, and safe levels of saturated and unsaturated fatty acids on the six amaranth varieties they tested.

Pregnancy Test for Mares

A new test can detect pregnancy in mares more accurately than the current industry standard, according to animal scientists at the University of Maryland. The test, called a radioreceptor assay, can detect pregnancy as few as 45 days after breeding, and researchers report their studies show a 100% accuracy rate.

SYMO-O-O-O



MORE DAIRY COWS ASK FOR IT.

SYMO-LAC.

Symo-Lac is a vitamin-mineral fermentation product for supplementing the diets of dairy cows. With high levels of digestive bacteria, enzymes, essential vitamins, minerals and electrolytes, Symo-Lac will help herds meet optimum performance requirements.

Symo-Lac is formulated to be used from pre-freshening to breeding and whenever health or performance problems occur. It will improve appetite, feed efficiency and feed utilization. It can be used to increase milk production and butterfat test. Plus, it will effectively combat mastitis condition.

With Symo-Lac, it's easier to have a contented cow. Contains no drugs or antibiotics.

Available in 10 lb. or 25 lb. pail or 40 lb. bag

Lock in profit when you find it, expert says

Many farmers are experiencing serious financial problems now. To stay in business through the rest of this decade they must do everything they can to minimize costs and maximize returns. This includes doing a more conscientious job of marketing–a difficult task this year.

"Grain farmers will need to watch the market closely for pricing opportunities in 1985," says University of Delaware extension marketing specialist Carl German. "If you see a chance to lock in a profit, do so. Don't hold back in hopes of a higher price; take a profit when you find one in the near term

"We're not likely to see any significant price increase in grains due to the slack demand and buildup in stocks," he explains. "For these reasons, opportunities to price grain profitably on the cash market are likely to be fewer and farther between this season."

In order to do a good selling job, farmers must establish a desired selling or target price for each commodity they grow, the specialist says. They should calculate the production costs for each crop and then divide the total cost by their expected yield. This will give a break-even price for the crop.

"We recommend establishing break-even prices based on a high, medium and low yield estimate," German says. "Once this is done, returns to family living and management can be added to each price in order to establish a target. Then compare current cash market, offerings and other alternatives for 1985 crops until you find one that meets your pricing goals."

This definitely may not be the year to go it alone in terms of the cash market, the economist says. In fact, he suggests farmers seriously consider enrolling in the 1985 Wheat and Feed Grain Program. "Considering the market situation, you may want to establish a minimum selling price for your crop. this can be done by using the 1985 wheat program, the feed grain program for corn, sorghum or barley, or possibly the agricultural options market.

(March 1 is the deadline for sign-up in this year's wheat and feed grain program).

Corn exports reported

WASHINGTON – Private exporters have reported to the U.S. Department of Agriculture the following activity:

– export sales of 950,000 metric tons of corn for delivery to the USSR during the 1984-85 marketing year and under the second year of the Long Term Grain Supply Agreement;

– export sales of 320,000 tons of corn for delivery to unknown destinations during 1984-85; and

– purchases from foreign sellers of 300,000 tons of corn for delivery to unknown destinations during 1984-85. A purchase from a foreign seller is a transaction in which a U.S. exporter contracts to buy U.S. produced commodities from a foreign firm.

The marketing year for corn began Oct. 1.

Sales of wheat and corn to the USSR for delivery during the second year of the Long Term Grain Supply Agreement (which began Oct. 1, 1984) now total 15,345,700 tons, of which wheat is 3,110,500 tons and corn is 12,235,200 tons.

Atlantic breeders honored for top herds

LANCASTER — Northern Lancaster area diarymen were honored for having the high producing herds this past year at the 21st annual District #4, Area #1, Meeting for Atlantic Breeders Cooperative members held recently at Blue Ball Fire Hall.

Receiving Certificates of Merit for having top Dairy Herd Improvement Association averages were Delmar & Susan Weaver, Leroy M. Stoltzfus, Marvin Witmer, Ellis. R. Rodney, E. Denlinger, Sol S. Stoltzufs, Kerry & Deborah Boyd, Clyde W. Martin, Nathan E. Stoltzfus, Gerald Martin, Meadow Vista Farms (Gerald Risser).

All herds were at least 10 percent above the state average for milk or butterfat production last year, while at least two-thirds of the cows in these herds are progeny of Atlantic sires. Awards were presented by Dave Zimmerman, Atlantic's Field Supervisor for this area.

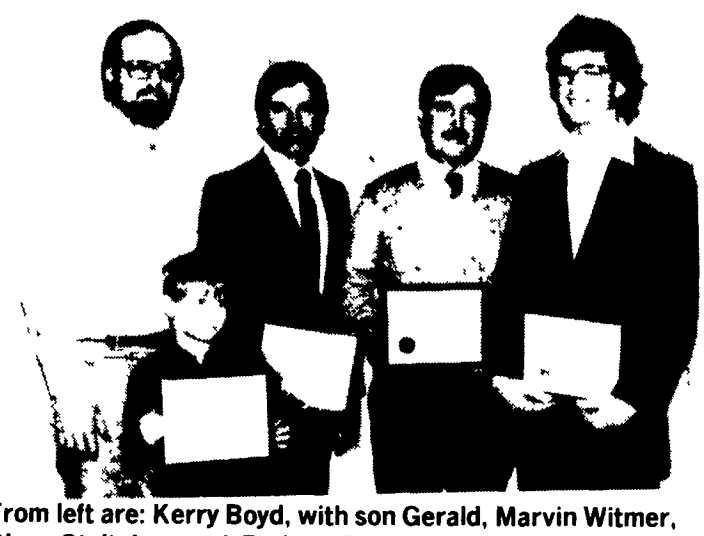
District #4 Director Clyde W. Martin of East Earl, informed members of the retirement of David Yoder after 41 years of service to Atlantic and the AI Industry. They also announced the appointment of Harry Roth as the new General Manager. He went on to explain, however, that the emphasis of this new management would still be the same - Membership Programs.

Martin also told the group that despite the slow farm economy and fewer cows to breed, Atlantic did show a profit in 1984. In conclusion, he looked to the future of ABC and the dairy industry, citing that as cow numbers and production change, and as the dairy industry changes, there will be changes in the AI Industry.

Following a new film showing Atlantic's facilities and service programs and a discussion of current popular sires, management representative Gary Heckman of Lancaster, pointed out that the Cooperative is dedicated to giving members the service they want by emphasizing quality technician and direct-herd service in the entire member area.

Members present voted for District representatives for the coming year. Election results will be announced in the next issue of the Cooperative's newsletter, since more than one meeting is held in most of Atlantic's 16 districts.

Atlantic honored, from left, Gerald Martin, Gerald Risser (Meadow Vista Farm), Delmar Weaver, and Clyde W. Martin, for high-producing herds sired by Atlantic bulls.



From left are: Kerry Boyd, with son Gerald, Marvin Witmer, Nathan Stoltzfus, and Rodney Denlinger. All received certificates for high production from Atlantic Breeders Cooperative.

Ag loan policies reviewed by new farm loan group

WASHINGTON — The Farm Credit Coordinating Group held its first meeting recently and discussed ways the U.S. Department of Agriculture and the Federal Deposit Insurance Corporation could better coordinate their efforts in communities where a bank has failed, Secretary of Agriculture John R. Block said.

He said these actions will allow for timely loan processing for farmers served previously by a liquidated lending institution.

Formed last week as part of an Administration package to deal with credit problems in agriculture, the group consists of federal credit policy officials and regulators of lending institutions.

Block, who chairs the unit, said the meeting in his office "brought us up to date on our respective activities and capabilities and we discussed ways to coordinate efforts in dealing with the farm credit problem."

"We also reviewed the guidelines of the bank regulating agencies as they relate to examination and supervision," Block said. "We now are considering the best way to get an accurate understanding of those guidelines to our people in the field."

Members of the group are William M. Isaac, chairman of the Federal Deposit Insurance Corporation; C. Todd Conover, comptroller of the Currency; Thomas J. Healey, assistant secretary of the Treasury for domestic finance; Donald E. Wilkinson, governor of the Farm Credit Administration, and Frank W. Naylor, Jr., under secretary of agriculture for small community and rural development.

Preston Martin, vice chairman of the Federal Reserve Board, is an observer.

At ADA/DC Annual Meeting

The "REAL" Vincent Price meets local dairymen

BY WENDY WEHR

SYRACUSE, N.Y. — A record number of Northeast dairy families gathered in Syracuse on Monday to hobnob with entertainer and dairy spokesperson Vincent Price, and to celebrate the 25th Annual Meeting of the American Dairy Association and Dairy Council, Inc. The glittery event took place at the Hotel Syracuse on Feb. 8.

More than 700 dairy enthusiasts packed the banquet hall on Monday evening to listen to Price's comments about the goodness of real dairy products and to hear a few anecdotes about his extensive entertainment career.

"As spokesman for ADA's "REAL" Seal program," said Price, "I've been given the opportunity to promote something I truly believe in — cooking with real dairy products.

"Working with ADA has provided me with a deeper understanding of the dedication, imagination, creativity, and just plain hard work that goes into making up the dairy industry today," he added.

At a press conference earlier in the day, Price showed his appreciation for the hard times that dairy farmers are experiencing. When asked whether government should be taking a role in protecting the family dairy farms, Price had a succinct response.

"I'll let David Stockman's mother answer for me on that one," he fired back as he reminded the reporters of Mrs. Stockman's comments last week from her farm in the Midwest in which she criticized her son's desire to axe farm support programs.

Price has served as spokesman for the dairy industry's "REAL" Seal program for over three years. "Since 1981, I have been proud to consider myself a "Partner in Promotion," said Price in his banquet address.

"I find I am very much identified with this program. When something is successful, people tell you about it," he noted as he related some stories of the comments about dairy products that he gets from friends and people in public.

Often, when he's marketing with his wife, said Price, shoppers in the supermarket will accost him with their own style of humor. "I'll be standing by the dairy case," intoned Price sarcastically, "and some woman will say, 'I suppose you're buying margarine!'"

In addition to his roles as actor, lecturer and author, Price is also a well-known connoisseur of art and food. His travels have enabled him to dine at some of the best restaurants in the world, and from these he collected recipes for his cookbook, "A Treasury of Great Recipes."

"In accepting the invitation of the great chefs to eat," commented Price, "there was also the challenge of trying to find out why the food was so good, and how it got that way. One of the reasons was the high quality ingredients, especially in dairy foods, with no substitutes for butter, cream, cheese or ice cream.

"I think consumers, as I do, believe in the genuine goodness of

(Turn to Page A21)

Actor and "REAL" Seal spokesman Vincent Price chats with the dairy royalty from New York, New Jersey and Pennsylvania.

ADA board adds Inter-State member

BY WENDY WEHR

SYRACUSE — Even as dairy farmers lined up for an autograph and an encouraging word from Vincent Price, other important dairy promotion business was being conducted at the 25th Annual Meeting of the American Dairy Association and Dairy Council, Inc.

Consolidation of the ADA/DC and DC policy boards was concluded at the annual meeting, and a new director from Pennsylvania was added to the board. Roy Book, Lancaster, will join the other ADA/DC board members as a representative of Inter-State Milk Producers Cooperative.

With the addition of Book, eight Pennsylvania dairymen sit on the ADA/DC board. Four of those represent four geographic regions in northern and central Pennsylvania, while the other three serve as directors-at-large.

The policy board consolidation served as evidence of the annual meeting theme: "Partners in Promotion." In his president's address Raymond Johnson stressed the partnership idea as he cited the opportunities for coordinated efforts of ADA/DC with the National Dairy Board, with the marketing sector of the dairy industry, and with the dairy farm families of the Northeast.

Executive vice-president Brian Ward also honed in on the partnership theme. With the inception of the mandatory deduction program, the need for ADA/DC fund-raising activities substantially diminished, said Ward. "Now we can turn our attention to the stronger working relationship that needs to be developed with the actual marketers of your products."

In commemoration of the promotion organization's 25th anniversary, Ward also stressed the history and development of successful promotion and nutrition education programs at ADA/DC. A special audio-visual presentation was shown during the evening banquet which reviewed the organization's history and ad campaigns through the years.

And in keeping with the look back over 25 years, this year's Service to Dairying Award was presented to members of ADA/DC's original board formed in 1960. The award is presented each year as part of ADA/DC's annual meeting to acknowledge a group or individual who has made a significant contribution to dairy promotion.

Announcing this year's presentation, president Johnson cited the founding directors for their courage, foresight, and commitment in founding the promotion agency and establishing a strong and unified program.

In other business at the meeting, dairy producers reviewed their 1985 budget and milk promotion program plans. Roughly 70 percent of ADA/DC's 1985 budget of $10.8 million will be invested in media advertising. Funds will also support local nutrition education efforts and supermarket and restaurant milk promotions.

ADA/DC is a producer-funded and directed dairy promotion agency that serves dairy producers in New York, New Jersey, and Pennsylvania.

ADA/DC president Ray Johnson took questions from the dairy producers during the promotion agency's 25th annual meeting on Monday.

John and Pat Baker of Covington, Tioga County.

Bakers receive Briggs award

BY WENDY WEHR

SYRACUSE — John and Pat Baker, dairy farmers from Covington, Tioga County, received the Leo Briggs Memorial Fund award on Monday evening at the ADA/DC annual meeting.

Presented to a dairy couple who are active in milk promotion and NEDCO's Young Dairymen's Organization (YDO), the Briggs award consists of an expense-paid trip to the UDIA meeting this month in Kansas City.

"The endowment was established to help enrich the lives of young agricultural leaders involved in dairy promotion," said ADA president Raymond Johnson as he presented the award to John and Pat Baker.

The Bakers farm with John's father and brothers in a four-way partnership. Both John and Pat are avid supporters of dairy promotion activities, and John is a YDO district director. But Pat, especially, has found her niche in organizing milk promotion programs in the Twin Tiers.

While both started attending promotion meetings a few years ago, says Pat, John soon found that his responsibilities on the farm restricted his involvement. But she continued to attend meetings and take a larger role in educating the local farmers about the benefits of dairy promotion.

"His life is the farm," says Pat in reference to her husband, "so I'm doing my part by getting involved in local milk promotion, getting to know people, and letting the dairy farmers know how our 15 cents is spent," says Pat. Too many farmers don't understand why they don't see the milk commercials on television, she adds, and they need to know that advertising must be aired where it will have the greatest impact.

Today Pat serves as secretary-treasurer of the North Central Milk-Makers. This group of young dairymen initiated a successful mall promotion in 1984, and have just completed the second annual milk promotion at the Arnot Mall, Horseheads, N.Y.

Last year NEDCO and ADA/DC were the only dairy organizations represented in the mall promotion, explains Pat. But this year Eastern, Dairylea, NFO, Agway and some other organizations also joined the activities for a bigger

(Turn to Page A21)

Vincent Price

(Continued from Page A20)

real dairy foods. I love to cook and eat great food. It's my basic philosophy that fine food requires real dairy ingredients," he added.

Price's reputation as a gourmet cook and appreciator of fine food makes him an ideal spokesman for real dairy foods and the "REAL" Seal that identifies them, says ADA/DC. But during the question and answer period at the annual meeting and at a Price press conference in the afternoon, a few questions were raised about the suitability of Price as a dairy spokesperson.

One dairy producer in the audience questioned whether Price's age prevented him from being a recognizable celebrity to the younger target audiences for dairy promotion. "I know who Vincent Price is, but my kids don't," the dairyman remarked.

But ADA staffers were quick to point out that Price's role as narrator on Michael Jackson's "Thriller" album is just one example of Price's wide-spread popularity.

During the afternoon press conference, a local newsman asked Price if his image as a "villain" didn't conflict with the wholesome image needed to portray the goodness and healthfulness of milk and real dairy products.

But Price was quick with an answer. "What, you mean I usually drink blood? Well, let me tell you, you can't have good blood without milk!" he quipped.

Price's confidence in his role was also upheld by a report on the evaluation of dairy product advertising given in the afternoon by William McDonald, senior vice president for marketing and economic research for the United Dairy Industry Association (UDIA).

Saying that Vincent Price is a really good spokesman, McDonald cited evidence that the REAL Seal helps people discern the difference between real and imitation products. "Consumers respond extremely favorably to Vincent Price, and are better able to distinguish products by the REAL Seal," he affirmed.

Currently, over 1000 dairy processors and retail food store chains who market private label dairy foods have been certified to display the "REAL" Seal. In volumetric proportions, reports UDIA, this represents approximately two-thirds of the U.S. commercial dairy industry.

Eastern merges with Vermont co-op

SYRACUSE, N.Y. — Delegates representing Eastern Milk Producers Cooperative local organizations met recently, approving a merger with Northern Farms Cooperative in Vermont, and a $3.3 million budget which calls for no increase in dues or equity.

The delegate meeting, held at the Hotel Syracuse was well attended, despite poor weather conditions. More than 225 people attended the day-long session.

Eastern's delegate body ratified a Board-approved management plan to accomplish the merger of Northern Farms Cooperative. Eastern is currently marketing Northern's milk under an affiliation agreement; when the merger is completed, the 238-member Vermont cooperative will become part of Eastern, with Eastern acquiring all of Northern Farms assets and liabilities. The voting by Northern Farms members will take place on February 25 in Montpelier; the merger will become effective March 1.

Members learned that Eastern is once again completing a successful fiscal year, with President Earl R. Forwood stating projected earnings for fiscal 1985-86 of up to $1 million. Due to its strong financial position, Eastern's 4,200 members have been free of extra marketing charges for almost three years.

Eastern members operate dairy farms predominantly in the states of New York, Pennsylvania, Vermont and Delaware, with some members in Maryland, Massachusetts, New Jersey and West Virginia. Each of the 140 locals elects delegates to act as the official voting representative of the members in that area.

The next delegate meeting will be held on June 25, in Syracuse.

State milk production down 2% in January

HARRISBURG — Pennsylvania milk production during January totaled 779 million pounds, two percent below last year's production according to Pennsylvania Crop and Livestock Reporting Service. The number of milk cows in the commonwealth during January averaged 735,000 head, 2,000 less than a year ago. Milk production per cow averaged 1,060 pounds in January, down 15 pounds per cow from a year ago.

Milk production for 1984 totaled 9.42 billion pounds, one percent less than 1983. Milk per cow totaled 12,926, 13 pounds less than the previous year, and the number of milk cows for the year averaged 729,000, 6,000 less than 1983.

U.S. milk production during January 1985 totaled 11.2 billion pounds, one percent less than January 1984. Total milk cows in the United States averaged 10.8 million head, two percent less than January 1984. Production per cow averaged 1,038 pounds, six pounds above a year earlier.

Milk production during 1984 totaled 135 billion pounds, three percent below the record high of 140 billion pounds set in 1983. Output per cow in 1984, at 12,500 pounds, is 90 pounds below 1983. The annual average number of cows is 10.8 million head, two percent below the average of 11.1 million head.

Wisconsin, with 23.5 billion pounds, remained the leading milk producer in 1984 followed by California with 15.3 billion; New York, 11.4 billion; Minnesota, 10.3 billion; and Pennsylvania, 9.42 billion pounds. These five states produce over half of the United States milk.

START BETTER, START NU PULSE!

JUST THE BEGINNING OF MAXIMIZING PRODUCTION AND LOWERING FEED COSTS

COMPUTRAC START-UP SPECIAL

SAVE OVER $1000

$4995

SPECIAL OFFER
LIMITED QUANTITY

INCLUDES.
1. COMPUTRAC WITH BUILT-IN PRINTER
2. ONE SINGLE RATION FEEDER STATION
3. COW TAGS WITH STRAPS FOR 25 COWS

Sale February 23 through March 31
Terms 10% down with signed order
Installation must be complete 60 days from order

* Steam-up dry cows prior to freshening
* Challenge feeding fresh cows to reach maximum lactation peak
* Maximize production from high producers or top group cows

"No one in the industry can match this offer!"

SINGLE RATION FEEDER STATION

THE COMPUTRAC FEEDING SYSTEM
..reduces feed costs by increasing feeding efficiency

UNIQUE COMPUTRAC FEATURES
Simple and dependable Bar Code ID system
Automatic feed increase and decrease capability
Two cow calendars per cow
Expandable to 499 cows
Easy to operate
Proven USA-made equipment

The Computrac can automatically adjust each cow's feed ration to her specific stage of lactation. It helps increase milk production by maximizing production sooner and maintaining the peak longer.

Computrac stands alone or as part of an expanding farm management system.

COMPUTRAC COW TAGS
Tough synthetic strap
Space-age plastic tag for easy visual reference
Individualized magnetic strips for positive feeder activation
Strips activate feeder from anywhere over identifier face, even while tag is moving
Unique instant on/off control

Briggs award

(Continued from Page A20)

and better promotional program.

John and Pat are also active on the local Tioga County dairy promotion committee, which sponsors a dairy day and the county dairy princess contest on the first Saturday in June.

While John supports Pat in her promotional activities, she in turn supports her husband on the farm, says Pat. But John and his family have many years of dairy promotion experience behind them as well

John's father, Daniel Sr., is on the board of directors of ADA/DC, and his mother also has served on county promotion boards over the years. The Baker family just moved to their Tioga County farm five years ago from New Jersey, where John's sister, Donna, was a state dairy princess.

The Baker Family Farm is now a 98-cow dairy operation, but at the end of the diversion program, 30 heifers will be added to the milking string and the Bakers will be building toward full production again. The family tills about 600 acres, growing mainly corn and alfalfa for the mixed dairy herd.

John and Pat look forward to the trip to the Midwest to attend the UDIA meeting for the Briggs award. They agree that the meeting will be a great opportunity to find out what UDIA is all about and to gather ideas for their promotion work at home.

As vice-president of NEDCO and a member of the executive board of directors of ADA/DC, Leo Briggs was a prominent dairy leader and wholehearted supporter of dairy promotion and research.

Group studies South American competition in soybeans

ST. LOUIS, MO – Unfair subsidies and increased production in South America is seriously eroding the world market share for U.S. soybeans and soybean products and undermining soybean farming profitability, according to five U.S. soybean farmers, all members of the American Soybean Association (ASA) Trade Policy Task Force.

During a two week trade policy mission to Brazil and Argentina in March, this task force will examine the impact of these subsidies on U.S. farmers, their cost to these two countries and possible ways to achieve their elimination.

"These two countries offer the greatest potential threat to traditional U.S. soybean export markets due to continuous increases in production," said ASA President and Minnesota soybean farmer Roger Asendorf. "In addition, the government of Brazil offers export subsidies, processing subsidies and low interest export loans which offer blatantly unfair advantages to their soybean industry."

The trade policy mission is sponsored by the Soybean Association, a farmer-controlled single commodity organization dedicated to the profitability of U.S. soybean farmers, and by Elanco Products Company a herbicide manufacturer. This mission is an ASA corporate relations project and will not utilize any farmer checkoff funds.

The ASA/Elanco Trade Policy Mission will include visits to Buenos Aires and Rosario, Argentina and surrounding farming areas; and Curitiba, Ponta Grossa, Sao Paulo, Rio de Janeiro and Brasilia, Brazil.

According to ASA Vice President and Arkansas soybean farmer Wayne Bennett, these countries were chosen because of their immediate threat to U.S. farmers' share of the world soybean market.

Our soybean farmer and soybean processor counterparts in South America should not be allowed to unfairly compete in the world market, said Bennett. "Something is not right when soybean meal and oil are being sold by Brazil and Argentina at a cost less than the value of the whole soybeans that it took to produce those products."

Bennett said the mission has two primary purposes. First, to allow the farmer members of the task force and a key U.S. congressional policy specialist to gain a firsthand understanding of the existing or proposed trade and domestic agricultural policy practices of Brazil and Argentina which would impact U.S. soybean and soybean product sales to world markets. Second, to stimulate subsequent actions by which U.S. soybean farmers and the U.S. government can improve the opportunity for increased U.S. soybean farmer profitability from expanded sales to world markets.

"U.S. soybean farmers have a tremendous need to increase their awareness of the impact of increased competition and unfair subsidies on their export markets," said Elanco Vice President of Marketing Services Ben Agnor, who will accompany the task force. "We recognized this need with the results of the Elanco-sponsored Project 2002, an in-depth study of the future of the U.S. soybean industry."

Many factors are currently impacting on U.S. soybean exports including the high-valued U.S. dollar and foreign export subsidies on competing products. The elimination of unfair trade practices will go a long way toward restoring the opportunity for profitably producing soybeans in the U.S., noted Angor.

Bennett said the ASA/Elanco Trade Policy Mission will meet with Brazilian and Argentinian government representatives, soybean industry and trade officials and local soybean farmers.

In addition to Bennett, the other soybean farmer members of ASA's Trade Policy Task Force include Dennis Boraas, Minnesota; Jennings Cox, Mississippi; John Hoffman, Wisconsin; and Harold Phillips, Alabama.

Dairy groups launch $6.2 million cheese promotion

ARLINGTON, Va. — Several national dairy groups will spend $6.2 million for network television advertising and in-store materials for this spring's cheese promotion, "Enjoy the Great Cheeses of America."

The promotion is a coordinated effort by the National Dairy Board, the United Dairy Industry Association, the COW Dairymen, Inc. (the dairy promotion organizations of California, Oregon, Washington and Nevada). The National Dairy Board will spend $4.6 million on the $6.2 million effort; UDIA and COW will contribute the remainder.

The $6.2 million promotion, which will run from March 11 to April 30, will advertise eight great American cheeses — Cheddar, Mozarella, Colby, Monterey Jack, Swiss, Blue, Muenster and American Process — with red, white and blue mobiles, danglers and banners at the dairy cases in 30,000 grocery stores. National network TV spots will promote five of the cheeses.

A new twist on this year's promotion is a consumer sweepstakes game. Grand prize is a lifetime of free travel for two on American Airlines (up to 20,000 miles a year); first prize is a Magnavox home entertainment center with a color TV, video cassette recorder, camera, and audio component system.

Sweepstakes blanks will run in the insert section of Sunday newspapers on March 10 and 24. Consumers must guess the name of a mystery recipe and the three cheeses used in each dish. To enter, two proofs of purchase of real domestic cheese (or the words "real cheese" ona separate piece of paper) must accompany each game card.

The National Dairy Board is also sponsoring a special cheese recipe pull-out accompanying Julia Child's food section in Parade Magazine on February 24 and April 28.

Between January 1 and April 30, the Board is sponsoring 354 cheese commercials on network TV. Its $68 million advertising program also includes more than 400 network ads for dairy calcium and fluid milk, over 1,000 cable-TV dairy calcium commercials, and 3,225 butter ads, which air on TV in 19 selected markets.

Dairy farmers represented by the Board are now, as a group, the 33rd largest network advertiser in America.

The National Dairy Promotion and Research Board was established by Act of Congress to develop a coordinated program of promotion designed to strengthen the dairy industry's position in the marketplace and to maintain and expand domestic and foreign markets and uses for fluid milk and dairy products.

This national program of promotion, research and nutrition education is financed by a mandatory 15-cent per hundredweight assessment on all milk produced and marketed in the contiguous 48 states. The 36-member policy-making Board is compsed of dairy producers.

Kansas is first "A" state in anti-brucellosis fight

WASHINGTON – Kansas has become the first state to advance from class B to class A since statewide classifications were established in the national program to control and wipe out cattle brucellosis, a U.S. Department of Agriculture official said.

"This means Kansas has lowered its herd infection rate to fewer than 2.5 infected herds per 1,000" according to Bert Hawkins, administrator of USDA's Animal and Plant Health Inspection Service.

Hawkins praised the Kansas farmers and ranchers, whose cooperation and sacrifices made this achievement possible. "The next step for Kansas is to advance to 'Free,' he said, "meaning there is no known infection in the state for at least one year."

Under a classification system that began in 1982, states are rated Free or class A, B or C, depending upon their rates of infection in herds and in individual cattle.

Kansas is also the first state to advance in brucellosis status in 1985. "This year was designated 'the payoff year' for Kansas and four other states, which have the opportunity to improve their program standings," said Hawkins.

"The others are Mississippi, which is working toward class B, and Georgia, Nevada and Tennessee, working toward class A," he said.

Backhoes built for farm digging.

Arps backhoes are built to handle the toughest trenching, tiling and digging jobs on the farm, yet they don't carry a construction-class price tag. You get the features you need without paying for what you don't need.

Built to work hard.

Arps backhoes mount rigid to the tractor using either the tractor's 3-point hitch or a subframe mount. Both allow the tractor's weight to transfer to the hoe for safe operation. Depending on your tractor, you choose the hydraulic system that will do the best job for you — tractor power or a smooth running PTO pump.

Built to work easily.

A clean boom design, efficient hose routing and unobstructed operator platform make your job easier The Dog-Leg boom on the 7', 9 5' and 12 5' models allows for full depth digging—even when working over a ditch bank

Built to work longer.

Arps backhoes are constructed with heavy duty high-strength steel. Boom and dipper sticks are made from double box-sections or high strength tubing. Cylinders are pre-tested to assure long performance.

Built to work with you.

Six models dig from 6 to 12½ feet deep and come with a wide array of buckets. Select a backhoe that is right for the jobs on your farm

Penn State program to help farmers with finance woes

UNIVERSITY PARK — Movies such as "Country" and "The River" have brought the plight of the American farmer onto the big screen. But for approximately 4,800 Pennsylvania farmers who find themselves in similarly distressed economic situations, the 1985 farm story is no Hollywood romance.

Farm Management Extension at Penn State hopes to help lessen the economic burden through a newly developed management program for financially distressed farmers.

"More than 8 percent of the 58,000 farms in Pennsylvania are in financial trouble," says William T. McSweeny, assistant professor of agricultural economics extension. "The program is designed to reach these farmers, the ones having trouble meeting loan repayments or those who have debt-to-asset-ratios greater than 40 percent."

Funded by the federal extension service, the educational program is free of charge and aimed at farm families who are unable to generate the cash flow required to pay operating expenses, interest and principal on existing debt and living costs.

"We want to teach these farmers the basic tools of financial management so they can reorganize financial planning to meet business and family living obligations," McSweeny says.

To do this, a series of two-day workshops will deal with farm financial management and the practical skills used in financial planning. Ten hours of classroom instructions will be provided during the two days.

Scheduled topics include financial requirements for successful farming during the 1980s, farm records systems and their role in financial management and the development and use of budgets as decision-making aids.

In addition, an eight-part, learn-at-home series is being prepared by extension farm management specialists for those financially distressed farmers who are unable to attend the workshops.

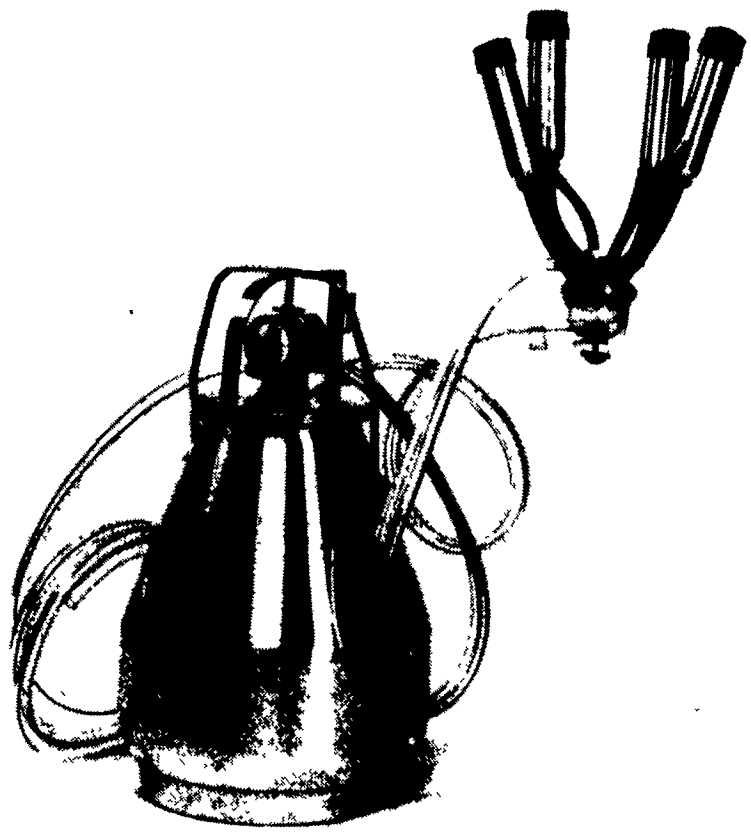
Tentative topics for the series include things to consider before requesting a loan, choosing the appropriate farm record system, tax management as an aid to increased farm income and the use of cash flow projections to aid in farm planning.

"We hope the workshops can be scheduled and completed before planting time 1985," says Larry C. Jenkins, associate professor of agricultural economics extension and program director. "The complete learn-at-home series should be distributed between April and mid-June.

"We're trying to keep both the workshops and the series flexible so topics can be modified to meet needs that may arise as the program progresses."

Farmers interested in attending the workshops and or receiving the learn-at-home series should contact Farm Management Extension, 202 Armsby Building, University Park, Pa., 16802, or telephone (814) 865-7656, or their county extension office. Both the workshops and the learn-at-home series are free.

THE SPECTRA EXTRA



Spectra, a supplier to several Major Dairy Equipment companies, also sells milker parts directly to dairymen. Spectra parts are interchangeable with the Brand Name Milkers, but are just a bit better in every case — more capacity or better materials or improved design.

THAT'S THE SPECTRA EXTRA.

State still free of honeybee mite

HARRISBURG — The results of a joint survey conducted by the Pennsylvania Department of Agriculture and USDA indicate that the honeybee tracheal bee mite Acarapis Woodi has not been found in the Commonwealth.

According to state Agriculture Secretary Penrose Hallowell, approximately 47 samples, of 100 bees each taken in the state have produced no signs of the parasite. The mite invades the breathing tubes of young adult bees, eventually killing them and threatening the colony.

"Field inspectors took half of their samples from commercial beekeepers and half hobbyists, and found no traces of the mite," said Hallowell. Samples taken from the state's 15 migratory beekeepers also turned up negative.

Concern from the health of the state's more than 27,000 colonies stems from mite alerts in at least 10 states, including neighboring New York and Ohio, as well as Texas, Louisiana and Florida, where bees are shipped during the winter season. On December 11, the Pennsylvania Department of Agriculture notified USDA officials in Florida that mites were found in bees owned by a Pennsylvania migratory beekeeper. Additional testing in Pennsylvania is pending.

Apiary inspectors throughout the nation have adopted a uniform set of guidelines for sampling and certifying bees "mite free" in an effort to eradicate the pest. Pennsylvania is prepared to accept bees from states which meet the guidelines.

Specifics on the guidelines can be obtained by contacting the Pennsylvania Department of Agriculture, Bureau of Plant Industry, Entomology Division, 2301 North Cameron Street, Harrisburg, PA 17110-9408 or phoning (717) 787-4843.

Tobacco growers vote in favor of auction

BY JACK HUBLEY

LANCASTER — An overwhelming majority of Lancaster County tobacco growers attending last Friday's tobacco marketing meeting at the Guernsey Barn in Lancaster would prefer the auction block to the current method of selling their product.

This fact came to light when 92 percent of those responding to a questionnaire indicated an interest in marketing through an auction. Eighty-nine percent also indicated a willingness to commit their 1985 crop to an auction-type sale.

According to Lancaster County Farmers Association president Earl Newcomer, Pennsylvania's production of some 15 million pounds of Maryland-type 609 tobacco is purchased by southern buyers who traditionally visit farms around the beginning of the year and buy from farmers on a one-to-one basis. Another 10 million pounds of Pennsylvania-type 41 tobacco is sold to local buyers for the cigar and chewing tobacco trade. Though the so-called Maryland type cigarette tobacco is usually higher priced, its lower yield per acre makes it roughly equal in value to Pennsylvania 41 on a per-acre basis, said Newcomer.

Virtually all of the state's tobacco is grown in the eastern part of the state, with roughly 90 percent coming from Lancaster County, he said.

With more than 250 producers in attendance, Friday night's meeting was the largest thus far in a series of meetings that began in January, prompted by producer dissatisfaction with tobacco prices.

A show of hands called for by the evening's keynote speaker, Bill Farrington of the American Farm Bureau, revealed that many farmers had parted with their best Maryland-type tobacco for about $1.10 per pound. Farmers commonly sold their entire year's production for prices averaging between 85 cents and $1 per pound.

"If we'd have had an auction system, a lot of tobacco would have brought $1.50 (per pound),"said Columbia producer B.C. Brubaker, pointing out that Maryland's auction system has proven to be far to superior to Pennsylvania's marketing methods.

"What we have now is nothing," Brubaker said bitterly. "Where's the farmer's freedom when a buyer says that his tobacco is too green? What can he do with it? He has to take it like a whipped puppy."

Maryland's tobacco auctions begin in March, said Newcomer, with auctions running three days a week for about a month. Buyers like to purchase the Pennsylvania-grown Maryland 609 earlier than this so they can concentrate on the Maryland sales, according to Newcomer.

"Some of the Pennsylvania farmers tried to take tobacco to Maryland, but the Maryland farmers don't like it and they try to discourage it," notes Newcomer. "But the Maryland Farm Bureau was very cooperative and even offered to help us with the details of setting up our own auctions," he pointed out.

Presenting an overview of the depressed tobacco market nationwide, the Farm Bureau's Farrington noted that most of Wisconsin's cigar leaf is sold directly out of the barns as well.

"Wisconsin's cigar leaf finished out the year at $1.10, and that's nothing to be happy about," Farrington said. "But your tobacco changes hands before it gets to the consumer more than about any other place I know of."

"Last year you didn't sell your tobacco, and I don't think I have to tell you that," Farrington said, pointing out that farmers selling out of their barns to individual dealers "gave away" their product.

"The problem with selling this way," continued Farrington, "is that your tobacco never seems to be just what he's (the buyer) looking for. And it never will be."

Lancaster attorney Jim Heinly took the podium to remind Lancaster County farmers that change is possible if farmers demonstrate unity.

"You're the people that tomorrow morning can build a barn and be milking cows in it by tomorrow night," he reminded the predominantly Amish audience.

"And you don't believe that you can change your lot? If you get an auction, you'll have the company up here buying, rather than the hucksters."

One Amish spokesman pointed out that an offer averaging about $1.05 per pound had prompted him to keep his harvest of Maryland 609 this year.

"We get a lot more labor in 609 because we have to grade it into three grades," he said, pointing out that separating the tobacco into "tops, middles and bottoms," requires extra time and manpower.

For many Amish this labor requirement is filled by enlisting the aid of their traditionally large families. "It's really a good family job and we enjoy it," said the Amishman, "but it's getting to the point where we better have a little more money to continue. I just hope we can get an auction going," he concluded. "I think we'd really have something."

Without the help of family members, Rothsville grower Carl Schnupp finds labor costs to be prohibitive at current tobacco prices. Schnupp averaged 91 cents for his 10-acre harvest, and paid labor rates of $6 per hour for spearing and $4.25 per hour for stripping.

"My own labor figured out to about $3 an hour," he said. "I don't know what I'm going to do this year."

Urging that Pennsylvania growers band together to implement an auction for the coming season, Farrington emphasized that growers must not allow buyers, "to break up your effort to sell something together. And for those of you who don't join, don't go out there and undersell the market," he concluded.

Lancaster County Farmers Association president Earl Newcomer looks on as Bill Farrington of the American Farm Bureau's tobacco division points out the merits of selling tobacco through an auction.

LCFA needs to hear from you

The Lancaster County Farmers Association is still seeking input from farmers who may not have attended the Feb. 15 meeting and filled out a questionnaire. LCFA president Earl Newcomer requests that growers answer the following questions and submit them to him at Box 174, RD 1, Washington Borough, PA 17582. Phone: 717-872-2646.

- **How many acres of Maryland and Pennsylvania-type tobacco do you grow?**
- **Do you favor an auction over the present method of selling tobacco?**
- **Would you commit your 1985 Maryland tobacco harvest to be sold at auction?**
- **Would you like to be involved in planning and setting up an auction?**
- **If not, can you recommend someone who might be interested?**

Farmers see latest in 'green thumb' technology at:

Lancaster County Crops and Soils Day

BY JACK HUBLEY

LANCASTER — Though Pennsylvania farmers are excellent livestock producers, their crop management practices too often fall short of the mark. This was the message delivered by Penn State Extension agronomist Melvin Brown, coordinator for the state's Crop Improvement Associations.

Lancaster County's Five Acre Corn Club winners for this year are (back row, left) Luke Brubaker, accepting for Brubaker Bros., Mount Joy; Harold Brubaker, Strasburg, also the recipient of the three-year award; Dennis Eby, Gap; (front, left) Galen Kopp, Mount Joy; and Lamar Miller, Manheim. Not pictured are Kerry and Deborah Boyd of Ephrata.

Started by Brown himself in Centre County in 1979, the CIA concept gained momentum rapidly, with 250 farms representing some 50,000 acres currently enrolled in the state's seven associations. About one-third of these farms were signed up in 1984, Brown said.

"This is really a crop management assistance program," Brown emphasized, likening CIA's to the Dairy Herd Improvement Association.

Brown explained that a board of directors employs technicians who visit participating farms twice a month. Technical services include:

- Establishing a crop production recordkeeping system.
- Providing a computerized analysis of production costs.
- Planning production needs including seed fertilizer, herbicides and insecticides.
- Obtaining and interpreting soil, manure and tissue samples.
- Monitoring fields for insects and weeds.
- Conducting plant population and yield checks.
- Making accurate field measurements.
- Sprayer calibration

"Our objective is to increase farm profits on individual farms," Brown said, noting that the size and complexity of today's operations make it impractical for farmers to realize their full cropping potential without help. "I think the time has come for this kind of management association," he said.

Also on the program was Penn State Extension agronomist Dr. Sidney Bosworth, introducing the 1984 Alfalfa Variety Report. A joint effort between the Penn State Extension and the USDA's Pasture Lab at University Park, the report provides yields as well as stand and disease ratings on 57 alfalfa varieties.

The information is the culmination of experimental trials run at the Rock Springs and Hershey research facilities since 1978. Those interested in obtaining a copy should contact their county extension offices.

In addition to speaking on alfalfa varieties, Bosworth talked about the value of grasses as an alfalfa companion crop.

Bosworth noted that many factors, such as species, variety, and seeding date, will affect the success of a legume-grass mixture, and he emphasized that farmers should manage for the legume, not the grass.

NO-SWEAT NO-TILL

BICEP+PRINCEP

To get unbeatable broadleaf and grass control in no-till corn, all you need is a program with Bicep® + Princep.®

Here's why: Bicep gives you season-long broad-spectrum control in conventional and conservation tillage.

But, for no-till corn, combine Bicep with Princep and you'll get long-lasting, residual properties that take care of broadleafs and grasses right up to a clean harvest. Even late germinators like crabgrass and fall panicum.

It's the dependable, economical combination that's going to become your standard for no-till.

So get no-sweat, season-long broadleaf and grass control. Get Bicep + Princep.

Pork Congress

(Continued from Page A1)

during the day simply because they were more active during daylight hours, Dr. Curtis reversed the procedure so that the lamps burned constantly and were turned off by depressing the switch. He found that his subjects adapted easily to this procedure and increased their paddle pushing at night in order to maintain the cooler 60-degree temperature.

Most important of all was the fact that these educated pigs averaged a 53-percent fuel cost savings over those housed in conventionally heated areas.

"On one farm we've studied, the savings actually ranged to 60 percent," notes Curtis, adding that on-farm research is continuing at two Illinois locations.

Applicable at the nursery and early growing stages, this technique may prove to be beneficial from a humane standpoint as well.

"We think we're being kind to the pig by fully controlling its environment," Dr. Curtis said, "but we might actually be stressing it."

In an effort to find out what other "hobbies" might interest pigs, the animal behaviorist is also experimenting with toys. Though placing a ball in the pig pen to alleviate boredom and reduce fighting has met with some success, Dr. Curtis notes that pigs are more likely to turn their attention to suspended toys that remain manure-free.

So far Illinois studies indicate a preference for cloth strips over chains and hoses. Future research will deal with the effects of such diversions on behavior, health, growth and feed efficiency.

"I still feel that the animal whose needs are best met is going to be the most profitable," said Dr. Curtis, adding that in years to come behavioral studies such as this project will be as widely accepted as nutritional studies are now.

Briefing Pennsylvania Pork Producers Council members on the National Council's activities was NPPC assistant vice president Russ Sanders. Noting that the pork industry is, "in a state of upheaval" Sanders pointed out that Canadian as well as European pork exports are teaming up to rob U.S. producers of profits.

Sanders stated that hog farmers typically spend 99 percent of their effort producing pork and only one percent in sales and promotion. The NPPC, whose 110,000 members produce about three-fourths of the nation's pork, is well equipped to make a significant impact in the promotion area, he said.

Citing the Council's new three-tenths of one percent checkoff schedule going into effect July 1, Sanders said that the new system would be more responsive to market conditions than the current 20 cents-per-head checkoff.

"When hog prices are higher, the checkoff is steeper, but when prices are down, the checkoff is also lower," Sanders pointed out. "This takes into consideration the producers' ability to pay."

The totally volunteer program boasts a 57-percent participation rate nationwide, with 62 percent of the Pa. producers taking part.

Like Sanders, Penn State economist Louis Moore called attention to the Canadian export situation, pointing out that more Canadian hogs entered the U.S. during the first three weeks of January than in the entire year of 1978.

Moore predicts that both pork and beef supplies will decline about four percent in 1985. "I don't think we'll have any trouble seeing $55 or $60 hogs this year," he said.

In light of the difficulties experienced in the livestock industry in recent years, Dr. James VanHorn, professor of family sociology, advised farmers on how to cope with stress.

"It's not the situation that causes stress, but our reaction to that situation that causes stress," he observed. VanHorn stated that physicians estimate that 60 to 75 percent of all diseases are directly stress related.

"One way to cope with stress is to go out of oneself and help someone else," he said. Other recommendations include taking pride in accomplishments, getting sufficient sleep and "talking it out" with a spouse or friend.

Following morning and afternoon presentations and visits with swine industry representatives, producers attended the Congress Banquet featuring well-known pork industry spokesman and producer, Rolland "Pig" Paul.

Also highlighting the evening event was the recognition of this year's Pork All-American, David A. Reinecker of York Springs. A 1977 graduate of Western Maryland College, Reinecker finishes 800 to 1,000 hogs.

The Reinecker swine operation is a family enterprise, with David's father Ray providing the crops and grain, and his Uncle Stan supplying more than one-half of David's feeder pigs.

A current director of the Southcentral Pork Producers Council, Reinecker is a newly elected director of the Pa. Council and also serves as one of three state delegates to the NPPC.

Reinecker and his wife Cheryl have two children, Jonathan and Andrew.

Young swine producers were also honored through the PPPC's 4-H and FFA Swine Production Awards.

Recipient of this year's 4-H award is Kathryn Bishop, daughter of Mr. and Mrs. Robert Bishop of Homer City. The Indiana County 4-H'er is vice president, treasurer and news reporter for her local chapter.

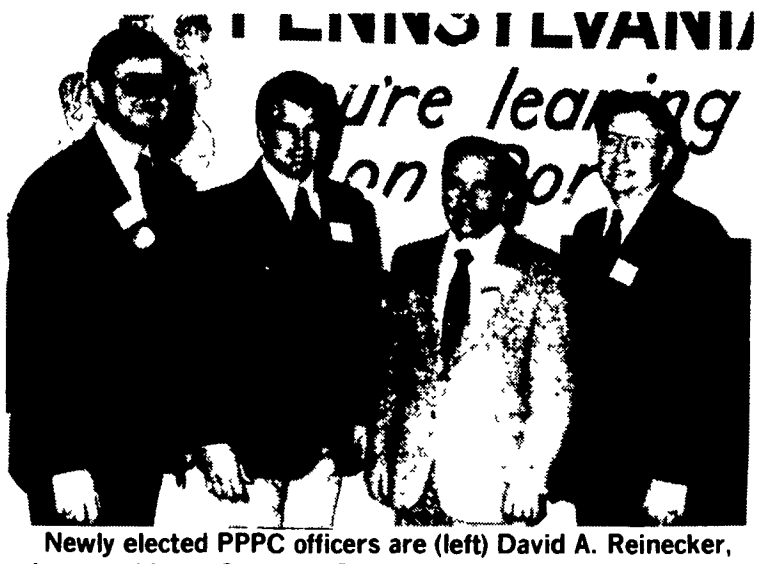
Rodney E. Herr of Gettysburg, took top honors in the FFA division. The son of Erma Herr, Rodney is a member of the Conewago-New Oxford FFA Chapter, and runs his own farrow-to-finish operation with 32 sows.

PPPC director Abe Fisher also took time to present a pigskin blazer to retiring Penn State professor Grant Sherritt, in honor of his longstanding involvement in the state's pork industry.

The afternoon sessions included a PPPC business meeting where new officers were elected. This year's officers will be: Stephen R. Burkholder, president; David A. Reinecker, vice president; Herb Schick, secretary-treasurer; and C. Eugene Wingert, national director.

Recipients of the PPPC's Swine Production Awards are Kathryn Bishop, Homer City, in the 4-H division, and Rodney E. Herr, Gettysburg, in the FFA division.

Once again H. Louis Moore managed to make a pig of himself at Pork Congress. Congress chairman Les Burdette thinks the economist could use a bit more finish.



Newly elected PPPC officers are (left) David A. Reinecker, vice president; Stephen R. Burkholder, president; Herb Schick, secretary-treasurer; C. Eugene Wingert, national director.

WHITE WASHING with DAIRY WHITE

- DRIES WHITE
- DOES NOT RUB OFF EASILY
- NO WET FLOORS
- IS COMPATIBLE WITH DISINFECTANT AND FLY SPRAYS
- WASHES OFF WINDOWS & PIPELINES EASILY

ATTENTION!
If your barn gets wet inside over the winter months, now is the time to have your barn white washed. This way you will get alot more out of your DAIRY WHITE.

BARN CLEANING SERVICE AVAILABLE WITH COMPRESSED AIR
To have your barn cleaned with air it will clean off dust, cob webs & lots of the old lime. This will keep your barn looking cleaner & whiter longer.

10% CASH DISCOUNT
Through The Month Of March
On Total Bill

We will take work within 100 mile radius of Lancaster

Best of Times, Worst of Times, Purina economist says

By James H. Everhart

MANHEIM — The farm situation in this country is a lot like the setting Charles Dickens described in the opening of "Tale of Two Cities," says Norm Coats, director of economics and policy research at the Ralston Purina Co.

It's the best of times and the worst of times," Coats told a gathering of about 70 local dairymen and livestock producers Wednesday at Kreider's Family Restaurant.

Real economic growth, a dampened rate of inflation, and declining interest rates provide general optimism for the economy in general, he said. And there's good reason to expect continued demand, as well as a levelling out" of costs for equipment and materials.

On the minus side, however, is a worsening farm debt, the growing number of 'highly leveraged" farmers who are having great difficulty with their obligations. There's also increasing foreign competition and surpluses that don't bode well for prices over the next few years.

The result, he says, is a situation that demands outstanding management and technical skills from the entire agricultural industry, both producers and the suppliers who meet their needs.

This is an age of technology, he told the group. 'We're moving into a science-power era "

As an example, he cited more than a dozen discoveries that could improve the productivity of dairy cows. He noted that both the producer and his suppliers would have to recognize the sophistication required to achieve maximum productivity from this new generation of dairy animals.

We think it puts real pressure on the nutritionist to develop programs that will work well under these circumstances, he said

In the future, he added, there will be fewer dairy farms and they ll be larger, more mechanized and more specialized, and have better technology and better management.

The dairy industry will also have to learn to market its products better, Coats said, noting that, in the past, the best the industry came up with was "white jugs with different colored tops "

If anyone looks at the way milk is marketed, I think they'll agree we have a long way to go, ' he added.

Meat producers are faced with a situation that is not as dynamic as the recent past. In the last decade, demand skyrocketed as per capita meat consumption increased markedly.

Over the past two or three years, however, demand has leveled off The average American now consumes slightly more than 200 pounds of meat annually.

When we were doing our earlier competitive battles here (in the 1970s and earlier in this decade), we were fighting on an expanding battlefield," Coats said.

Beef supply, meanwhile, is expected to decline slightly over the next several months, he added.

We're seeing a decline in the cow numbers that are necessary to maintain the present level of production," Coats said. That slight decline in production, he said, could result in higher beef prices over the next several months.

Egg producers, he predicted, will also see some increases in prices, above the essentially unprofitable levels they now receive. Current prices, he said, are about 15 percent below the actual cost of production.

Despite all the difficulties and hardships farmers now face, Coats said, these are the most exciting times in agriculture that we've seen in our lifetimes."

Improved feeds and breeding technology, more difficult marketing challenges and constant pressure to improve productivity, he said, will make farmers better managers of their time and resources.

We're going to bring out of this era a new age in managers," he said All of us will have to improve our productivity if we are to survive

Purina economist Norm Coats talks to central Pennsylvania farmers during a luncheon address Wednesday sponsored by Ralston Purina and its local dealers.

Exotic Newcastle found in Miami pet bird facility

WASHINGTON — More than 2,000 pet birds were destroyed in a Miami commercial pet bird facility this week because exotic Newcastle disease was confirmed there, a U.S. Department of Agriculture official said. Exotic Newcastle disease is a deadly virus that affects birds.

"The disease was discovered as a result of tracing the origin of a bird infected with exotic Newcastle in Tampa," said Bert Hawkins, administrator of USDA's Animal and Plant Health Inspection Service. "We're concerned that the disease is in commercial pet bird channels, but as far as we know, there has been no contact with the poultry industry."

"The birds were destroyed in a humane manner and the owner will be compensated," Hawkins said.

The disease was confirmed in birds at the holding facility owned by the Imperial Bird Company, Inc., in Miami. The company is known to have shipped more than 1,900 birds that may have been exposed to the disease to 16 other states and Puerto Rico. State and federal officials are tracing all of the shipments and are conducting tests at facilities that received birds thought to be exposed.

Exotic Newcastle disease can cause death rates of 50 to 95 percent in chickens. It can be rapidly transmitted from bird to bird and premise to premise. The disease poses no health risk to people who eat poultry and eggs; however, it can cause a transitory eye inflammation or flu-like symptoms in people who handle infected birds.

"Numerous outbreaks of exotic Newcastle disease have occurred since 1972," Hawkins said. These outbreaks have cost millions of dollars to eradicate. The most serious U.S. outbreak of exotic Newcastle disease occurred from 1971 to 1973 in southern California, when the disease spread from infected pet birds to a dense poultry population. Nearly 12 million birds -- mostly laying hens- had to be destroyed at a cost of $56 million.

Computer seminar

LANCASTER — The Penn State Extension Service of Lancaster County announces that a two-hour seminar on "Using Computers in Agriculture" will be conducted at the Lancaster Farm and Home Center, 7:30 p.m. on Friday, March 1.

This will be an opportunity for farmers to view several networking services, to share ideas and concerns, and learn what others are doing.

For more information, call the Lancaster County Extension Service (717-394-6851) or the Entre Computer Center of Lancaster (1-800-832-8585)

Study says 40 percent of dairy farms under financial pressure

UNIVERSITY PARK – The very heart of rural American society will be at stake if current farm financial pressures force America's food production into the laps of large corporations.

Evidence of conditions pushing in just that direction can be found in a recent study of dairymen across the state that estimates 40 percent of them may be financially distressed this year.

The possibility that many of these farmers are not going to survive their current financial crises has "frightening implications," says Larry C. Jenkins, a Pennsylvania State University associate professor.

"Take 10 percent or 6,000 family farms out of the picture in Pennsylvania and replace them with 200 corporate production units and some rural communities will die," Dr. Jenkins predicts. "This issue pulls at the heart of a society that has been and is the strength of this nation."

Without the family farm, which contributes to the financial structure of its region through support of machinery dealers, grocery stores and feed suppliers, the deaths of rural communities–already occurring, he says–will continue.

But, the agricultural economist says, without astute understanding of financial management, today's farm manager may be facing slim chances of survival.

"Farmers have traditionally been weak in the area of financial management," he says. The farm manager of 1990 will have to be a sharp financial manager in order to secure credit, and to simply "survive long-term."

Dr. William Grisley, assistant professor of agricultural economics, agrees with Dr. Jenkins. "A lot of inefficient farmers could be out of business. If dairy prices continue at current levels or decrease, there could be a readjustment of dairy farming in Pennsylvania," he says.

"Sound financial planning, production management and efficiency are essential to long-term survivability," he adds.

Drs. Jenkins and Grisley have been analyzing data that points to a significant number of dairy farmers in this state who are categorized as either severely or moderately financially distressed. Dr. Grisley estimates that this year 40 percent of the 1,477 dairymen surveyed will have a cash flow of less than $15,000 (22 percent), or will experience a negative cash flow (18 percent).

This comparesd with 1979 when 23 percent of the farms were in this situation.

Drs. Grisley and Jenkins explain that the rapid appreciation of farm assets in the 1970s, particularly land, and relatively low interest rates encouraged many farmers to use debt financing to increase farm size.

"Financial institutions supported it, and now we see that many lenders overloaned, and many farmers overborrowed," Dr. Jenkins says.

A shift in the agricultural economy at the beginning of this decade, leading to increased interest rates and a decrease in the collateral value of farm assets, is now sending many farmers scurrying to even meet family needs.

Both professors believe that unless new programs are instituted which will ease the dairymen over their financial troubles, about 10 percent of the existing dairymen may not survive.

Dr. Grisley, in a staff paper on the subject of financial distress on Pennsylvania dairy farms, outlines two programs which may offer some relief.

The first is a Farmers Home Administration (FmHA) program that was announced by President Ronald Reagan last year. The plan calls for a moratorium on FmHA interest payments for up to 25 percent of the farmers' debt for a period of five years.

The second plan would feature a 90 percent loan guarantee for a bank that lends to family farmers if the bank writes off at least 10 percent of the unpaid loan balance.

Dr. Jenkins stresses education as a key to the long-range plan for survival, pointing to the financial management program offered by Farm Management Extension at Penn State as the way to survive in the 1980s. (See accompanying release.)

"We are at a cleavage point in agriculture. It is no longer enough to be a good crop and livestock manager. The farm manager must also be a good financial manager," Dr. Jenkins says.

HARDY BRAND CORN PERFORMANCE PROFILE:

Dick Hahn, Easton, PA

"I've been with Hardy five years now. I have no reason to change."

"I started out with the 701X, and it's done so well, I really stick with it. It's given beautiful corn, considering the dry weather we had last year. I also plant the 301X, and that always does good. Hardy Corn is nice and even, when you look out across the field—that tells you something about your yield potential. And I've never had empty spaces where it didn't come up.

It's a good corn, at a good price, and they give me good service where I buy it. That's why all my corn is Hardy."

PHA Convention Sale

(Continued from Page A1)

J is scored Very Good 86 and claims an index of +1290M and +$151. Kay J's dam is the EX-91, GMD, Art-Acres Elevation Kay, whose milk record as a 5-year-old stands at 34,000 pounds, with 1115 pounds fat.

The third and fourth high-selling animals were a Bova daughter and a Leadfield Associates II consignment.

The only Bova to go across the sale block, Glee-Hi Bova Grace was purchased for $22,000 by the Grace Associates, Woodstock, Va. Guaranteed safe with a Valiant calf, the Glee-Hi Conductor Galena daughter was consigned by Glenn Freese, Oxford.

Leadfield Petro Ella - ET brought $19,500 from Pearmont Ltd., Greenleaf, Wis. Fresh December 28, Ella is milking 100 pounds and was sold with a guarantee of 10 transferable embryos over a two-year period. She was bred by Ed Doeberiener of Leadfield Associates II, Jamestown.

Of the 49 consignments to the convention sale, seven brought more than $10,000. Sale receipts totaled $319,300, with an average of $6,516.

"Last year's average was a little higher, over $8,000 without the bulls," commented Bill Nichol of the PHA after the sale. "But we sold more animals this year, and the general atmosphere out in the dairy industry is at a low ebb."

Still, added Nichol, quality animals were offered at the sale, and the purchasers of the day's consignments will have a great future in breeding when milk prices go up.

The convention sale was co-managed by the Pennsylvania Holstein Association and Backus Associates.

Look for additional coverage of the 1985 Pennsylvania Holstein Convention in next week's Lancaster Farming.

Art-Acres Kay J - ET brought the second highest sale price of the day at the Pennsylvania Holstein Convention Sale. Bruce and Dorothy Dudley and Brent Apotheker, of Glen Mills, purchased Kay from Larry Wenger, Lancaster, for $30,000. The sale staff from PHA and Backus Associates dressed in colonial costumes in honor of the convention location in historic Philadelphia.

The Lighter Side...

Farm: What a cityman dreams of at 5 p.m., never at 5 a.m.

xxx

A city girl, telling friends about her brother-in-law's farm: "It's one of those experimental farms where the cows have calves without any bulls around - they call it artificial inspiration."

xxx

A man trying to buy a horse from a farmer was startled when he named $1000 as his price. Nonetheless the prospective buyer countered with a reasonable $250 offer. "That's a heckuva discount," mused the farmer, "but I'll take it."

As the buyer counted out the money he couldn't resist asking why the farmer had accepted $250 after first naming four times that sum.

"Well," he drawled, "I thought maybe you'd like to own a thousand dollar horse."

Does richer-tasting lowfat milk hold key to surplus?

WASHINGTON — Californians may not know it, but for years they've been drinking richer tasting lowfat milk that's higher in protein and calcium than most of the milk the nation drinks. And California dairy farmers have enjoyed a market where per capita consumption of milk is above the U.S. average.

These two facts have given birth to an idea that is attracting attention in many factions of the dairy industry, according to a recent issue of the Agriculture Department's FARMLINE magazine.

Some industry specialists have reasoned that the California example may be a keystone for improving milk consumption nationwide. They believe that if milk tasted richer and contained more nutrients, consumers would buy more milk and swallow up part of the 9-billion-pound oversupply.

Not everyone agrees.

The issue centers around California's standards for milk solids-not-fat (SNF)--mostly protein, calcium, and lactose (milk sugar). California requires a minimum of 10 percent SNF in lowfat milk, 9 percent in skim milk, and 8.7 percent in whole milk. The federal standard is 8.25 percent SNF in all three types of milk.

It's not that California cows are particularly special. The higher standard is usually met by fortifying fluid milk with unsweetened condensed or nonfat dry milk (milk with the butterfat and water removed).

"California didn't allow processors to sell lowfat milk until 1962. When the California legislature finally approved lowfat milk sales, it required that extra SNF be added partly to make the milk taste thicker and richer," says dairy economist Richard Fallert of USDA's Economic Research Service.

"Unfortunately, improving national milk consumpion may not be quite as easy as having the federal government simply adopt California's higher SNF standards," says Fallert. He contends that many factors exist in the California marketing area that cloud an obvious cause-and-effect relationship. "For example, California has one of the oldest and most innovative milk advertising campaigns in the nation, and that helps to increase milk consumption," Fallert adds.

And there are other factors that may account for California's high consumption rates, according to Fallert. California has:

- relatively low retail milk prices because of efficient farms and markets.
- a younger population than the U.S. average--important because children tend to drink more milk than adults.
- especially high milk quality on the farm and throughout the distribution system, which makes milk less likely to pick up off-flavors in storage or transit.

And so the debate goes on.

"The case for higher SNF standards is not clear-cut," Fallert says. "While per capita consumption of fluid milk in California is about 11 percent above the national average, it is not the highest in the nation. Moreover, California also produces an oversupply of milk. Thus, it does not seem likely that a shift to higher standards would solve the current U.S. supply-demand imbalance which has its roots in other causes," he elaborates.

Fallert is not even convinced that higher SNF standards would necessarily provide an incentive to consumption in all regions of the country. Some evidence, in fact, points in the other direction.

"Perhaps one of the most important questions that needs to be looked into," he emphasizes, "is that there seems to be a change in consumer preference away from milk fortified with SNF--at least in some markets. In areas outside California where consumers had a choice between plain and SNF-fortified milk, consumer purchases of fortified milk began to drop in 1973. At that time, fortified lowfat and skim milk represented 15 percent of total fluid milk sales in federal order markets. By 1983, SNF-added lowfat and skim milk sales had dropped to 6.6 percent of the total."

"Consumers may be choosing the lowest priced milk, and milk without added SNF is generally less expensive than SNF-fortified milk. Or perhaps the change represents a growing preference for the flavor of unfortified milk, or a lack of knowledge about the extra nutrients SNF-fortified milk offers. We can't be sure without further research." he says.

Consumer groups argue that although SNF-fortified milk may taste richer, higher SNF standards would force retail milk prices to rise. Fallert agrees that California's special case of higher SNF standards and relatively low retail prices may not necessarily apply in other areas. He predicts that milk prices could go up by as much as 3 percent nationally, or 3.5 cents a half-gallon, because of the extra cost of adding SNF to milk to reach the California levels.

Fallert does see some advantages in the California example. One potential advantage stems from the fact that current federal SNF standards are not regularly enforced, which sometimes leads to abuses in which milk has less than the federally required 8.25 percent. Enforcement of higher standards would not only avoid some of these abuses, it might offer taxpayers cost savings in terms of reduced milk price support expenditures by the Commodity Credit Corporation (CCC).

The CCC buys milk products-cheese, butter, and nonfat dry milk--when the market price falls below a pre-established support price level. Because processors usually use nonfat dry milk to fortify fluid milk that falls below the required SNF percentage, higher SNF fluid milk standards would increase processor demand--and the price--for nonfat dry milk. The CCC would then have to purchase less dry milk, which Fallert believes could add up to a substantial savings--anywhere from $12-$218 million. The risk, of course, is that consumers might buy less milk because of the price increase, and this could offset some of the increased nonfat dry milk sales to processors, Fallert says.

Another benefit of higher standards, Fallert points out, is that they generally raise milk's nutrient content--especially protein, calcium, and vitamins. However, increased SNF also raises the calories, a disadvantage for people with weight problems. In addition, high SNF content may cause problems for infants and people with lactose intolerance or kidney disease.

But perhaps the most important unanswered question for dairy farmers is: Will higher SNF standards raise milk prices at the farm? "Well," says Fallert, "not necessarily. In most cases, our current pricing system doesn't directly compensate farmers for producing milk with higher SNF content, so their best bet is simply to produce for high-volume yields."

USDA plans Farm Women's Forum, April 24-26

WASHINGTON — "Reach Out–Speak Up for Agriculture: Farm Policy" will be the theme for the U.S. Department of Agriculture's 5th Farm Women's Forum April 24-26 at the Capitol Holiday Inn here.

"With critical problems currently facing agriculture," Secretary of Agriculture John R. Block said, "it is crucial that producers and non-producers alike understand the importance of having an effective and equitable farm policy."

"Farm women," he said, "are in an exceptional position to convey this vital message. As producers, they are aware of the industry's problems and needs. And as active and contributing members of their communities, they are keenly aware of the relationship between producer and consumer."

Block said the purpose of the forum is the same as earlier forums: To give information and encouragement to farm women as they meet the challenge of telling agriculture's story.

The forum program will include government experts and representatives from public and private organizations. They will provide practical, usable information on such topics as communication skills, key agricultural issues, farm legislation and policy, commodities and foreign trade.

The form is open to all women involved in agriculture. They need not be representatives of farm organizations to attend. However, because of space restrictions, participation will be limited to 250 on a first-come-first-served basis, with consideration for geographical representation.

Applicants will be asked to pay a $25 reservation fee, which will be refunded at registration. Housing, meals and transportation expenses must be paid by the participants.

Applications must be received by March 11. Registrants for whom space is available will be notified by March 18.

For more information on attending the 1985 forum, contact: Farm Women's Forum, Office of the Secretary, Public Liaison, U.S. Department of Agriculture, Washington, D.C. 20250. The telephone number is (202) 447-2798.

Milking School, Dairy Day Slated

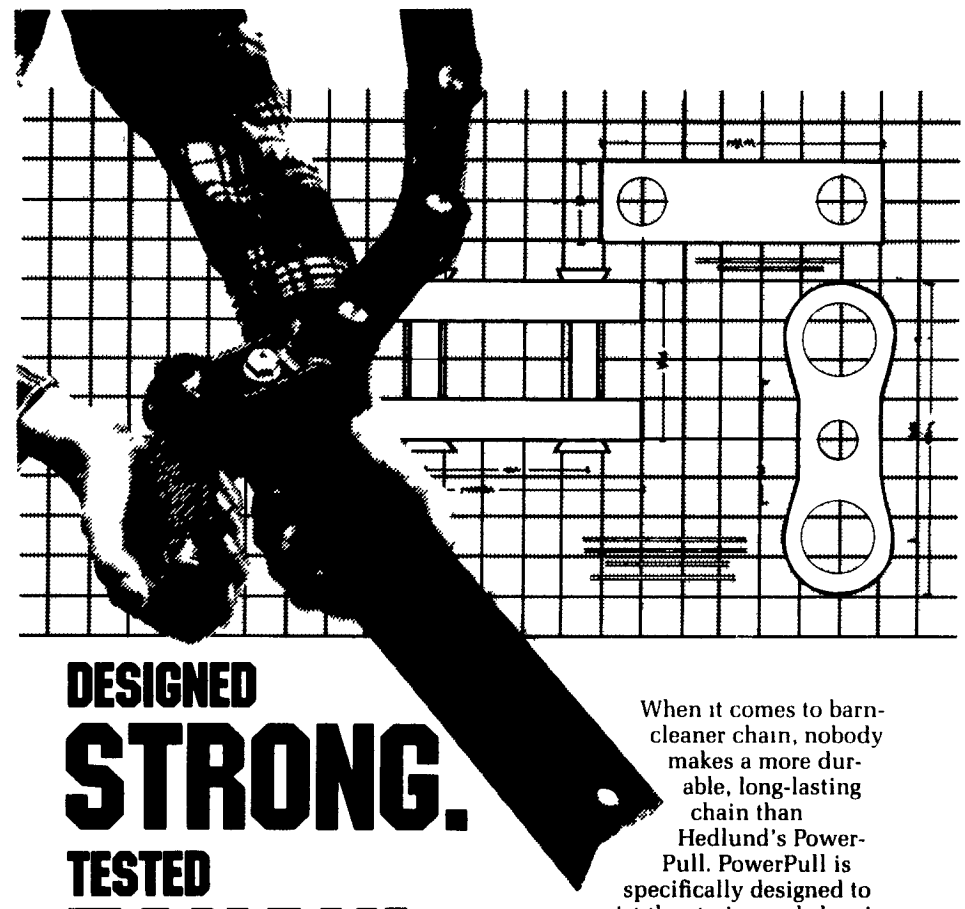
LEESPORT - Berks County agent Clyde B. Myers has slated the following two events to be held at the County Ag Center

- The Berks County Dairy Day, to be held Monday from 9 a.m. to 3 p.m. Speakers include Oley area veterinarian Dr. Dennis Hoshall, State Milk Marketing Board official Don Duncan and several Penn State extension specialists
- A Milking School to be held March 4th and 5th from 9 a.m. to 3 p.m. Speakers include Dr. Hoshall and several county extension agents

Vegetable growers meeting slated

BIGLERVILLE — A regional vegetable growers meeting will be held at 9:30 a.m. Tuesday at the Penn State Fruit Research Laboratory in Biglerville.

Topics include asparagus, pest control, weed control and marketing opportunities



DESIGNED STRONG. TESTED TOUGH!

When it comes to barn-cleaner chain, nobody makes a more durable, long-lasting chain than Hedlund's Power-Pull. PowerPull is specifically designed to resist the strains and abrasive wear of day in, day out use. In fact, in independent tests, PowerPull chain met or exceeded every criterion for top-quality barn-cleaner chain.

One look tells you why. Constructed of extra heavy-duty 7/16" steel tension plates, PowerPull is engineered with special heat-treated, forged links to firmly hold the angle flite and wear shoe. Add machine-swaged 7/8" pins for a solid, secure connection and you've got a chain built to work smoothly and withstand abuse year after year.

Manufactured exclusively by Hedlund, PowerPull is compatible for use with most major barn cleaners—Jamesway, Badger, Clay, Acorn, Starline, Klinzing, Barn-O-Matic—as well as Hedlund Systems. For more information and prices see your local Hedlund dealer or write Hedlund/Martin Inc., Dept. PP, 841 Kutztown Road, Myerstown, PA 17067. Telephone 717-933-4151.

Crops and Soils

(Continued from Page A24)

Two varieties of grass not tolerant of early cutting are Timothy and Smooth Bromegrass, Bosworth pointed out. Grasses that adapt well to early cutting include Orchardgrass, Perennial Ryegrass and Reed Canarygrass.

Of this latter selection, Perennial Ryegrass is relatively new to the Northeast. Recognized as a high quality grass, Perennial Rye is not as aggressive as Orchardgrass and is compatible with alfalfa, the agronomist said.

Bosworth did point out, however, that the low-growing, fine-leafed Rye can cause mowing problems in a thick stand, and may be slow to dry.

The agronomist also sees Reed Canarygrass as a compatible companion crop, especially for use in low, wet areas. One problem with this variety, he notes, is that its quality suffers as the grass approaches the heading stage.

Reed Canarygrass is also known to contain alkaloids that cause low palatability. But Bosworth points out that two varieties having low alkaloid levels have been developed. These are the currently available Palaton, and a variety called Venture which should be available within the next few years.

Turning to alfalfa diseases, Bosworth cautioned farmers to be aware that a relatively new disease to Pennsylvania known as Verticillium wilt has been detected in several counties in the southeast area.

Verticillium begins at the top of the plant, notes Bosworth, wilting the tips of the leaves and progressing downward. A green shoot will often begin growing from the dead leaves, he said.

The disease over-winters in soil and debris, and is easily transmitted by mowing equipment, Bosworth said. To guard against spreading Verticillium, the agronomist advised mowing the youngest fields first, washing mowers between cuts and rotating fields to corn or small grains, later returning with a more resistant variety of alfalfa.

A highlight of the Crops and Soils Day Program was the presentation of the county's Five Acre Corn and Alfalfa Growers Awards. Taking first-place honors in this year's Five Acre Corn contest were Luke and Jim Brubaker of Mount Joy. The brothers grow 600 acres of corn, and this year harvested 188.2 bushels per acre with a plant population of 22,540 using Pioneer 3184.

Other Five-Acre winners placed as follows:

2.Lamar Miller of Manheim planted Cargill 980 and harvested 186.1 bushels at a plant population of 26,167.

3.Galen Kopp of Mount Joy harvested 169.9 bushels of Pioneer 3184 at a population of 24,948.

4.Harold Brubaker of Strasburg planted DeKalb T1100 and recorded 168.7 bushels per acre at a population of 21,540.

5.Kerry and Deborah Boyd, Ephrata, harvested 168.4 bushels of DeKalb-Pfizer XL71 with a plant population of 25,198 per acre.

6.Dennis Eby of Gap harvested 154.7 bushels with 22,377 plants per acre.

Two Lancaster County alfalfa growers were also honored. Wilmer Rohrer and Sons, Lancaster, placed second in state competition against 90 participants, with a harvest of 9.5 tons per acre. Nelson Wenger has placed in the top 10 in the state contest for three consecutive years. This year he harvested eight tons per acre on his Manheim farm.

Top producers in this year's Alfalfa Growers Program are (left) Wilmer Rohrer, representing Wilmer Rohrer and Sons, Lancaster; and Nelson Wenger, Manheim.

Understanding "basis" aids grain marketing

Farmers must be able to analyze basis in order to market their grain profitably. Basis is the difference between the cash (spot) price a futures market price at the time and place delivery will occur.

Properly used, basis can provide signals about market trends, indicating whether the market is good for current cash sales, or whether waiting for a later sale will likely yield a higher return.

"Basis can be applied to the cash market, the futures market, and the now developing agricultural options market," says University of Delaware extension marketing specialist Carl German. "Farmers should look on it as an aid to reducing price risk. It's a valuable decision-making tool."

The economist recently prepared a circular, "Using Basis in Making Grain Marketing Decisions," for the grain marketing task force of the Cooperative Extension Service's Northeast Marketing Committee.

The 21-page publication describes basis in detail and explains how to use it to make decisions on when to accept or reject cash bids, when to accept or reject basis bids, and how to calculate returns to a storage hedge. It also contains average Eastern Shore basis tables for corn and soybeans for the 1980-81 to 1982-83 marketing years.

To obtain a copy of "Using Basis in Making Grain Marketing Decisions," contact, Extension Marketing Specialist Carl German, 230 Townsend Hall, University of Delaware, Newark, DE 19717-1303. Or telephone 302-451-2511. Ask for extension circular A.E. 144.

ASCS to aid loan review

WASHINGTON — Field staff of the Agricultural Stabilization and Conservation Service will help Farmers Home Administration employees process loan applications in an effort to step up farm credit delivery, Secretary of Agriculture John R. Block said.

The agreement between the two agencies of the U.S. Department of Agriculture is part of a farm credit relief program Block announced earlier this month.

The two agencies recognize the urgent need for debt adjustment and related loan assistance to be made available in a timely manner to farmers who have suffered severe economic reverses during prior years due to disasters and poor economic conditions.

"ASCS assistance will come from current staffing and will not jeopardize their own services to farmers," Block said. "Although the amount of assistance available will vary from place to place, we see a large benefit to farmers generally as a result of this agreement."

ASCS personnal, upon request, will help FmHA county supervisors in such activities as performing appraisals, assisting in preparing loan applications, calculating production losses, developing financial plans and helping with general clerical work.

Maryland Cash income reported for '83

COLLEGE PARK, Md. — Maryland's agricultural economy, with a relatively strong livestock industry and diversified crop production, did not show the severe drop in cash farm income felt in other areas of the nation in 1983. Total cash farm income to Maryland farmers from all sources was unchanged in 1983 with income from government payments increasing $10 million over 1982 to offset decrease in other cash receipts.

Cash receipts for Maryland farm commodities totaled $1,032,454,000 in 1983, a decline of $5.8 million over total receipts in 1982. The sale of livestock and products make up 68 percent of total cash receipts from Maryland's 18,000 farms, with crops accounting for the other 32 percent.

Broilers accounted for 32.1 percent of the total farm commodity income, with milk second, accounting for 21.6 percent of total income. The Maryland broiler and dairy industries, accounting for over half of the Maryland farm receipts, both showed some increase in income in 1983 over 1982. Broiler sales increased from $328 million in 1982 to $331 million in 1983. Farm milk sales went from $219 million to $222 million during the same period.

Total Maryland crop income in 1983 was $330 million, with corn, soybeans and tobacco being the chief cash crops.

Greenhouse/Nursery crops, in 1983 amounted to over $42 million and over four percent of total farm receipts Receipts from Greenhouse/Nursery crops have showed a consistent increase in Maryland of from $2 to $4 million per year over the past four years.

Total receipts from vegetables decreased $2 million in 1983 from 1982. Total receipts for fruits increased $2 million for the same period.

Of the two most important vegetable crops, potato sales increased nearly $2 million in 1983 while the sales of tomatoes fell near $2 million in 1983.

The category, Other Crops, for which the USDA does not estimate individual values, accounted for a significant drop in cash receipts of nearly $5.5 million from 1982 to 1983.

New loop helps cows fight off mastitis

WASHINGTON — Dairy cows may have a new defense against mastitis, a bacterial infection ranked as the most serious disease of dairy cattle worldwide, a U.S. Department of Agricuulture researcher said.

A cow needs white blood cells, as humans do, to fight off infection, and researchers now may have a way to help dairy cows get the number of disease-fighting cells up to the necessary level, said animal scientist Max J. Paape of USDA's Agricultural Research Service.

What causes the cell increase — exceeding the 900,000 cells per milliliter needed to halt infection — is the rough surface on a plastic loop that is inserted harmlessly in a cow's udder, Paape said.

Inside the udder, the loop takes the shape of a one-inch diameter coil and, while floating in milk, stimulates the inner lining to produce the extra white blood cells.

He said the roughened surface was new, but not the loop. A California veterinarian, William Kortum, invented a smooth-coated loop in 1978.

Paape said he and colleagues unintentionally scratched the original loops while evaluating them at the agency's Beltsville, Md., Agricultural Research Center. They discovered in laboratory studies that the roughened surface increased white blood cells.

Tests of cows at Beltsville later confirmed, he said, that a cow produces three times as many cells if the roughened loop is inserted instead of the smooth loop. He said joint field trials in Israel showed that the new loop reduced the incidence of severe mastitis 75 percent.

According to Paape, the roughened loop could be available to veterinarians in a year.

"Our new findings raise the prospect that the roughened loop may be a research tool for getting answers to how cows respond and build immunity to foreign organisms," Paape said.

"We will be evaluating the loop's potential use for studies of immune systems in animals," he said. At the same time, Paape will continue research on cows' mastitis'-fighting responses to the loop.

He said the loop may be the "first practical way to prevent infection in the udder of dairy cattle, but it is not a cure-all."

For the loop to be fully effective against mastitis, he said, "farmers also must practice good sanitation and management of their herds."

He stressed that the loop is meant to be used primarily in herds having chronic mastitis problems. "If cows are healthy," he said, "the loop can be left alone."

Paape said the original loop initially held promise of controlling mastitis. But when Paape tested three Maryland dairy herds in 1978-79, the smooth loop gave only slight protection, according to Robert H. Miller, chief of the Milk Secretion and Mastitis Laboratory at Beltsville.

"Almost by chance, we found that rough-surfaced loops caused more leukocytes," Paape said.

What led to the finding were photographs of electron microscope images. These pictures showed that a coating of white blood cells adhered to loops that had been accidentally scratched while being inserted, the researcher said.

Paape and colleagues experimented, using sandpaper to roughen the loops. These new loops, he said, brought about a "dramatic jump in leukocyte counts" — from about 300,000 per milliliter for the smooth loops to over one million per milliliter for the new loops.

He said about 900,000 white blood cells per milliliter are thought necessary to stop most mastitis infections. A tally of the cells is made in the milk taken from the cow by hand after automatic milking is finished.

In Israel, Gideon Ziv of Kimron Veterinary Institute is conducting large-scale field trials of the loop. Israeli scientists are cooperating with USDA, Paape said, as part of the Binational Agricultural Research and Development agreement between the United States and Israel.

Computers give Maryland farmers management help

COLLEGE PARK, Md. — The Department of Agricultural and Resource Economics has released two farm management computer programs designed to help County Agents in Maryland provide better farm management services to farmers.

One of the programs can be used to help farmers decide if participation in the 1985 corn program will be profitable. The manual for the program is being printed as an AREC departmental publication entitled "Evaluating Participation in the 1985 Corn Program with the Radio Shack 16B Microcomputer". The department also published "Should You Participate in the 1985 Corn Program?" by George Stevens to provide essential background information.

The second program, "Cash Flow Planning with the Radio Shack 16B," shows how the Multiplan spreadsheet program can be used to simplify preparing Coordinated Financial Statement cash flow forms. The program and AREC-published manual assume a basic understanding of how to use Multiplan.

Both programs are available for use at all County Extension Offices in Maryland. The programs are being jointly supported by the Department of Agricultural and Resource Economics and the Extension Computer and Information Services Unit.

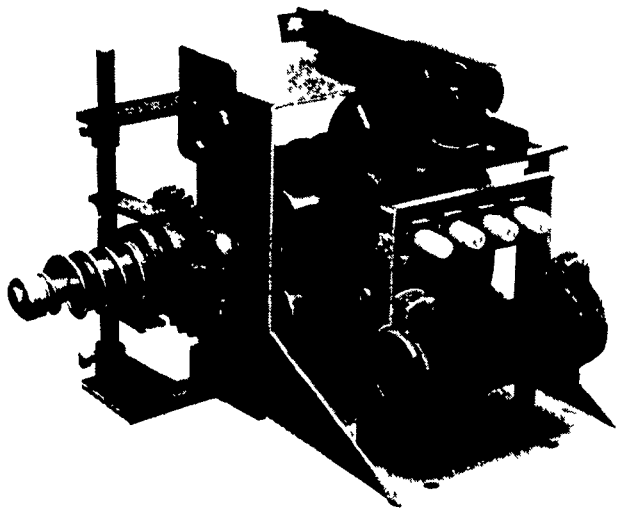
DEMCO METERING PUMP



FIELD PROVEN FOR LIQUID STARTER FERTILIZER

● The Demco chain driven metering pump insures positive placement of all band application liquid fertilizers. ● Pumps even heavy analysis fertilizers with no plugging. ● Rate of flow is variable from 3 to 40 gallons per acre (maximum pressure 10 lbs), without changing the sprockets ● The pump rollers feature Nylatron bearings which are resistant to corrosive chemicals and will not freeze tight. ● Flow stops when implement stops or is raised

● Demco metering pumps come in 4, 6, 8, 12 or 16 hose models to fit most makes of pull type planters, tool bar planters and tillage implements. ● 8, 12, 14 and 16 hose metering pumps also available for grain drills. ● Planters, tool bar implements and cultivators without a countershaft, a gauge wheel or some other means of transferring power to the metering pump can use the Demco GDW 10-A ground drive wheel assembly.

DEALERS INQUIRIES INVITED

Insurance exec donates another prize steer

BY JOYCE BUPP
Staff Correspondent

YORK — A second chapter in the tales of youth fund-raisers instigated by York insurance executive Art Glatfelter is in the works.

York 4-H'er Joe Druck bankrolled over $2500 when York insurance executive Art Glatfelter paid $2 per pound for "Ratt", the champion heavyweight. Processed and frozen packages of the beef will be auctioned off to benefit York youth ag programs during the February 28 Ag-Business seminar.

Two years ago, the York country-boy-made-good wrote Farm Show history when he paid $12 per pound for the now-famed steer "J.D.", and then turned the beef back to York 4-H and FFA members for fund-raising.

Glatfelter returned to the Farm Show steer auction in January, and purchased "Ratt," the champion heavyweight winner, for $2 per pound. Exhibitor of the strapping, 1340-pound Chianina-Angus cross was York 4-H'er Joe Druck.

Glatfelter in turn donated "Ratt" to the Agri-Business committee of the York Chamber of Commerce. In conjunction with the York Extension office, co-sponsor of the February 28 Agri-Business seminar at the York Fairgrounds Banquet Hall, the committee has arranged for the steer to be processed and quick-frozen at Godfrey Brothers, York R8. Packages of the beef, each 150-pounds of top-quality steaks, roasts and hamburger, will go before the seminar participants at 11:30 a.m., with York auctioneer Blaine Rentzel fielding the bids.

On hand for the auction will be exhibitor Druck, whose bank account is over $2500 fatter since he parted with his project beef.

"This was my best show year, ever," acknowledges the 16-year-old sophomore and varsity wrestler at Dallastown Area High School.

The Phil and Carol Druck family, also raises purebred Simmentals at their York R2 farm, and Joe hopes to continue that interest with his own small herd someday. His 4-H Simmental beef breeding project heifer earned him additional top ribbons this year at Farm Show, taking the junior championship and best breed and owned in the junior breed show, and the reserve championship in open class competition.

"Ratt" wasn't always the sleek, super-tall, well-muscled steer that caught the judge's eye in the Farm Show arena, according to his young exhibitor.

"He was named for his looks last summer," admits the seven-year 4-H beef show veteran. "Actually, he looked pretty 'ratty' back then."

"Ratt", incidentally, is a half-brother to the noted "J.D.," who earned over $38,000 in funds for exhibitor Annette Walter and York agriculture youth after his record sale price and follow up fund-raising efforts in 1983.

Both steers were acquired by their 4-h exhibitors through the annual club calf sale, held in November, by the Donald Walters family of Airville.

USDA creates kits to make beekeeping equipment

Beekeeping is an interesting hobby which can be a profitable enterprise especially well suited to small farm operations. The initial cost of hives and equipment can be a drawback, however. The Cooperative Extension Plan Service of the U.S. Department of Agriculture has plans for hives and equipment which can help keep expenses down.

According to University of Delaware agricultural engineer Dr. Jim Scarborough, one plan (No. 6324) is for a simple low cost hive that can be easily built by anyone familiar with basic woodworking techniques. A single hive can be cut from one 1 x 12-inch and one 1 x 8-inch board, each 10 feet long. The plan shows one brood hive, a super, a base and a cap. For a taller brood hive, Plan 6327 offers two options – a five-frame-deep unit, or a unit with a double row of three frames each.

Although comb honey is marketable, many people prefer honey which has been separated from the wax. A honey uncapping tank and super dumping board can be constructed following directions given in Plan 6325. Details are given for cutting the 30-gallon dumping tank from a sheet of 20-gauge galvanized sheet metal.

"If you want to speed up the separation process, you can uncap the combs and spin the honey from them, using a handcrank-operated honey extractor," Scarborough says. Plan 6330 shows the detail for a stand and comb holder that holds four combs at a time. The honey passes through an expanded metal screen into a commercially available pail which is large enough to contain the unit.

"This unit requires some welding and other metal work," the specialist says, "but any small metalworking shop can do the work for you at a reasonable cost, if you don't want to tackle it yourself. If you want to collect the beeswax, Plan 6265 shows you how to build a solar beeswax extractor."

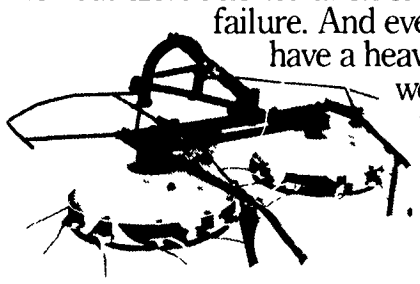
Blueprints of these plans are available for 50 cents each, or $2 for the set of five, by writing: Extension Agricultural Engineer-Plan Service, 058 Townsend Hall, University of Delaware, Newark, DE 19717-1303. Make checks payable to University of Delaware.

THE VICON SYSTEM. MAKE IT WORK FOR YOU.

Sometimes it seems we spend half our lives fighting the system. But there's one system that's always on your side—the Vicon Haying System.

With a Vicon KM Mower/Conditioner, one of our heavy-duty hay rakes or tedders, and a new Vicon Square Baler, you can make hay faster, better and more economically.

The KM321, for instance, is the fastest mower/conditioner in the world. It's 30 percent faster than conventional mower/conditioners. A new drive unit lets you operate non-stop. Take square corners without drive line vibration or danger of failure. And even if you have a heavy, dew-wet crop, the KM 321 won't plug, and won't leave you worrying about leaf loss.



The Vicon line of tedder/rakes are just as efficient in their own right. They're versatile, ideal for short crops and economical, too. They rake or tedd quickly and cleanly. Available in two working widths to fit any farm. With easy tine replacement. And best of all, Vicon tedder/rakes are gentle on your crop.

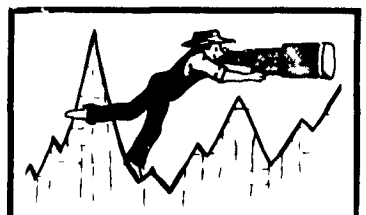
Last but not least, you'll find that Vicon SP Square Balers give you the convenient range of bale sizes and weights to meet your haying needs. All have a combination auger/feeder fork which moves the crop evenly into the full width of the bale chamber. So you get consistent bales of even density, time after time. The Vicon is also available with a hydraulic bale thrower.

For more information on Vicon Haying Systems, or the name of your closest Vicon dealer, just call or write. We think you'll see that when you can't beat the system, there's only one thing left for a grower to do.

Join it.

Join the Vicon revolution

VICON FARM MACHINERY, INC., PO Box 6313, Chesapeake, VA 23323 804/485 1600



New crop varieties: What's in a name?

ITHACA, NY — Naming new crop varieties created through years of research and testing poses a challenge to scientists. Coming up with names that farmers can easily remember isn't always a cinch.

Cornell University plant breeder Mark E. Sorrells found himself in a similar predicament last year when he announced a winter barley, a product of 18 years of work by Sorrells and Neal F. Jensen, who initiated the project in 1966.

When Jensen, the creator of many small grain varieties for the farmers in the Northeast, retired from Cornell seven years ago, Sorrells took over the work and put the finishing touches to it. Sorrells is an associate professor of plant breeding in the New York State College of Agriculture and Life Sciences at Cornell.

As a result, Sorrells had the honor of naming the new barley, a highly productive variety with strong resistance to destructive powdery mildew disease. The barley was known to the Cornell scientists only by its code: $MS22F_1S_61$.

Hard put to come up with a catchy, yet dignified name for the barley, Sorrells decided to ask for help from farmers. The occasion was a field day staged at Cornell last summer for members of the seed industry in the Northeast. He handed out cards to the participants to suggest a name. Meanwhile, he made a similar appeal through the news media.

Response was almost instantaneous. All told, more than 70 suggestions came in from farmers throughout the Northeast. Some even came from Canada.

The suggested names ranged from those honoring the two Cornell scientists involved in the work to poetic descriptions to exotic gods and goddesses.

Some of the names proposed in tribute to the scientists and Cornell were JS (after Jensen and Sorrells), Nealjen, Neal, Jensen, Jensor, Jensorl, Cornell One, Barnell (a contraction of Cornell and barley), and Corbarnel. Some farmers wanted to name the barley after other people such as Sherman, Morgan, Xavier, Fred, Maccabee, Spry, Judy, Caldwell, and Everly.

Since this new barley is planted in the fall, it is winter hardy. Hence, names like Blizzard, Burley, Hardibar, Frosty, Brutus, Winbar (a contraction of winter and barley) were suggested.

Geographic locations were cited as possibilities, too: Monroe, Tully, Caledonia, Cambria, Seneca, Ovid, Frontenac, Oneida, Lockport, Cayuga, Romulus, and Keuka. One person came up with Novia, a shortening of Cazenovia. Another person proposed Sherpa, a hamlet previously inhabited by a small tribe in the soaring Himalaya mountains in South Asia.

Other proposals included Daga (a Babylonian god symbolizing earth), Vishnu (a Hindu god representing supreme), Ceres (the goddess of grain), and Hercules (a mythical Greek hero fabled for his great strength). Because the United States hosted the 1984 Olympics, names such as Olympus, Olympiad, and Olympian were proposed.

Still other suggestions were romantic, poetic, descriptive, or catchy: Dawn, Splendor, Success, Advance, Bumper, Tempo, Bountiful, Encore, Topper, and Limitup. Some others were imaginative as well as hilarious: Buster (bin buster), Bottomsup, Bgood, and Beerbelly. One farmer came up with "Murder" because he saw the barley growing in a muddy field during the Cornell field day. Another farmer offered "Wunterkind," a play on the German word "Wunderbar" meaning wonderful.

The list included some puzzlers, too, such as Bi, Modular, Locust, and Lotto.

One of the suggested names that caught Sorrells' attention was Willis. After months of deliberation and consultation with the members of the College's seed committee, Sorrells decided to christen his barley in honor of the late George Willis, who was a technician for small grain projects at Cornell from 1943 to 1971. Willis died several years ago.

Scientists usually follow certain guidelines in naming new varieties, according to Sorrells. For one thing, living persons are honored only under rare circumstances; those deceased are considered first.

"Willis is an appropriate name, because it honors a Cornell technician who had dedicated his life to our breeding programs," Sorrells remarks.

In Sorrells' view, names of crop varieties should project the image of quality research work involved in plant breeding, should not infringe upon existing trade marks, should be one word, must not contain numbers, and, above all, should not be profane or discriminatory.

"In addition, names must be easily recognized by farmers," Sorrells notes. "They also should carry significance to New York State or Cornell."

After weighing these and other factors, Cornell's Sorrells recently named his winter barley "Willis". He says this projects a good image of Cornell.

Willis the barley is ready for commercial use starting this fall.

Meanwhile, Sorrells sends thanks to all the farmers who used their creativity and imagination in coming up with all the names.

"I had a lot of fun going over the suggested names," Sorrells notes.

USDA Plans Back-to-Basics Approach to Management

WASHINGTON — A back-to-basics management plan to deliver U.S. Department of Agriculture programs and services more efficiently was announced by Secretary John R. Block.

"Just as we need to reshape the programs and services USDA delivers, we must also reevaluate the support system that delivers those programs, some of which are 30 years old or more. We do not intend to reduce services, only to set standards for delivering them in the most efficient and business-like manner possible," Block said.

The plan addresses five principal management areas for the 109,000-person department. It includes innovations in:

—Dollar Management: managing cash, debt, travel and cross-servicing with other agencies:

—Information Management: enhancing computer compatibility, oversight, communications and acquisition;

—Structure Management: streamlining management structure and systems, and cooperative processing;

—People Management: improving work environment, position management, employee participation and training; and

—Managing Management: encouraging shifts to the private sector, innovation and management practices and reviews.

Block said workplans for each principal area are in the final stages of development. "We are meeting with our agency managers to gain their commitment and resources to follow through," he said.

"We have asked agencies to develop initial strategies by May to implement the plan," said Block. "Certain management areas will be targeted, as will certain agencies. We want to work with our agencies in areas where there is the greatest playoff in efficiency and in return on taxpayer dollars."

Delaware corn, soybean results in

Results of 1984 Delaware corn hybrid and soybean variety field trials are now available.

According to University of Delaware extension agricultural agent Derby Walker, the corn hybrid results are contained in a 17-page report which should be of value to dealers and farmers "who are interested in more details than just yields." This report contains information on diseases, early stand vigor, stalk lodging, stay-green, ear height, percent ear drop and percent bearing stalks.

Sovbean variety trial results are contained in a separate 17-page report which shows, says Walker, that last year was very difficult for Group Five varieties. Earlier varieties received enough rainfall to produce a respectable crop, whereas drought adversely affected late maturing beans. This is the reverse of 1983, when late soybean plantings outyielded early beans because of the long fall.

"When you're selecting bean varieties," advises Walker, "look at the history of that particular bean over time and compare its performance during years of drought. If you plant only soybeans, be sure to select varieties that mature at different times, or plant them at different times to avoid feast or famine conditions. If all your beans are flowering or maturing at the same time and you don't get rain, then it'll be famine. To spread out your risk, plant several different maturing beans."

Copies of both the 1984 Delaware corn hybrid and soybean variety test reports are available from county extension offices in Newark (451-2506), Dover (736-1448) and Georgetown (856-5250).

High yields linked to soil and water conservation

ATLANTA, Ga. — Consumers like reasonable food prices and North America certainly has them, as well as plentiful supplies. Many people in agriculture would agree that one of the key reasons food prices are lower than in most other countries is the efficiency of modern farmers. Higher yields enable growers to keep costs per unit of production lower.

Higher yields also result in other often-overlooked benefits, both to producers and consumers. Good management practices for higher yields have the added bonus of boosting water use efficiency, deterring soil erosion, and protecting water quality. Dr. Werner L. Nelson, Senior Vice President of the Potash & Phosphate Institute (PPI), recently discussed these relationships at a national conference on conservation tillage.

Many accepted cultural practices are not given proper credit in producing high yields and in reducing water loss and soil erosion. Examples of such practices include proper plant population, genetically superior hybrids and varieties, better pest control, narrower rows, proper fertilization, liming and conservation tillage.

Conservation tillage farming coupled with maximum economic yield management give the highest, most profitable yield along with the greatest potential for reducing soil erosion and nutrient losses. For conservation tillage practices to be widely accepted by farmers, however, they must be economically equal or superior to current tillage practices. Final crop yield is the factor which most influences a farmer's profit.

Maintaining or increasing yield levels helps both the farmer and the environment. Economically, higher yields are more profitable because a farmer's fixed costs (land and labor, for example) are spread over more bushels or tons, thus reducing unit production costs.

Higher yields help the environment because more crop residue and better root systems work together to protect the soil. In any conservation tillage system, the degree of soil protection from erosion is closely related to the amount of crop residue left on the soil surface.

Higher yields leave behind more crop stalks and leaves to protect and enrich the soil. A rule of thumb is that for each additional bushel of corn produced there are 55 pounds more residue; for each bushel of soybeans, 80 pounds; and for each bushel of wheat, 100 pounds.

USDA information shows that with 2,000-3,000 pounds of surface residues after planting corn, soil losses with no-till were reduced 52% compared with moldboard plowing. However, with over 6,000 pounds of surface residues, no-till reduced soil losses 92%.

Research in Illinois revealed that as corn yields went from 200 to 307 bushels per acre, the amounts of stover and cobs were 4.73 and 7.94 tons per acre, respectively. The percent grain as compared to total above-ground dry matter remained about the same, 49.5% and 47.8%. This indicates that as yields increased plant residues increased at about the same rate.

Conservation tillage slows erosion by leaving more residue on the surface. Higher yields help by leaving more residue.

Water loss and soil erosion will continue to decrease as the higher yields furnish more residues to leave on the surface and produce stronger root systems to bind and hold soil particles in place. Soil productivity will increase.

Plan cover crops now to enrich soil

NEWARK — "Almost every time I preach the cover crop story, someone asks: Does it pay? I wish I could pull some fancy figures out of my notebook to help, but I can't as yet," says University of Delaware extension agricultural agent Dean Belt. Yet he's convinced that it does pay to grow cover crops.

The question is, how much do covers benefit the soil? When, and how often will farmers see a return in the form of better yields on other crops? Scientists know part of the answer, but nobody can come up with figures to cover every situation.

"Any farmer really interested in his soil has an eye on organic matter," Belt says. "Most Delaware soil has under two percent organic matter. This has been the case since the day the cows left the farm and we turned to grain farming. When that happened we lost the manure to put back into the ground, and we lost the long-term benefits of hay and pasture crops in our rotations."

How can farmers rectify this situation? "First," says the county agent, "face up to the fact that changing the organic matter content of soil is a slow and difficult process. But it's still worth trying."

According to Belt, the most likely source of organic matter for today's grain farmer is a cover crop (sometimes called green manure). But because of the cost and difficulty of establishing a winter cover during the busy harvest season, farmers can't do this on all their land. So they must determine where the need is greatest.

Because erosion control is a major reason for using a cover crop, producers are most likely to plant one where they have an erosion problem, or on fields where there will be less crop residue to hold the soil.

"We know which fields will likely erode, and we know that conventional soybeans actually increase the chance of soil erosion," Belt says. "Assuming these two situations warrant use of a cover crop, let's focus on how to get one established."

The challenge is to establish a cover soon enough in the fall for it to develop sufficient growth to hold the soil during the winter. This means planting as soon as possible after harvest, or planting in the standing crop before harvest, which requires air seeding.

"Air seeding is certainly faster, easier and probably cheaper in the long run," the county agent says, "but it has its problems. If moisture is short, the stand may not be what you'd like. Still, it is worth considering—especially if you can time the seeding for favorable weather and plant something like rye grass."

Farmers have several options for establishing a winter cover. Besides sowing it by air, they can spin it on over crop residue, work the ground and seed it, or use a no-till drill.

Winter grains—especially rye—make good winter covers. "Annual ryegrass works well and has the advantages of low price, moderate rate per acre, ease of air seeding and high success rate," Belt says. "However, this crop is harder to kill in the spring so if you use it, be sure to check your herbicide program."

Red clover, Austrian winter peas and hairy vetch also work well, but usually do best if the seed is worked into the soil. Red clover has been air seeded successfully and is certainly worth considering, the agent says. And don't forget Kentucky 31 fescue for those permanent hard-to-hold waterways.

Why talk about winter covers now, when the planting season is August through November? "Because this is when you can see where your problems are," Belt says. "Check your fields from now through spring. The problem areas you spot will tell you where to plan for a cover crop next fall."

Epler's Market named to Hall of Fame

CHERRY HILL, N.J. — The Certified Retail Farm Market Division of the Pennsylvania Farmers' Association (PFA) has presented its annual "Hall of Fame" award to Epler's Farm Market of Northumberland, Northumberland County. The award was presented Wednesday during the Mid-Atlantic Direct Marketing Conference at the Cherry Hill Inn.

Epler's Farm Market has been operating since 1961 and features pasteurized milk supplied from 100 Holstein cows on the farm. John Epler of R. D. #1, Northumberland runs the jugging operation which sells consumers about 4,000 gallons of farm fresh milk in one-half gallon containers each week. Low-fat milk and ice cream are also produced and sold at the market.

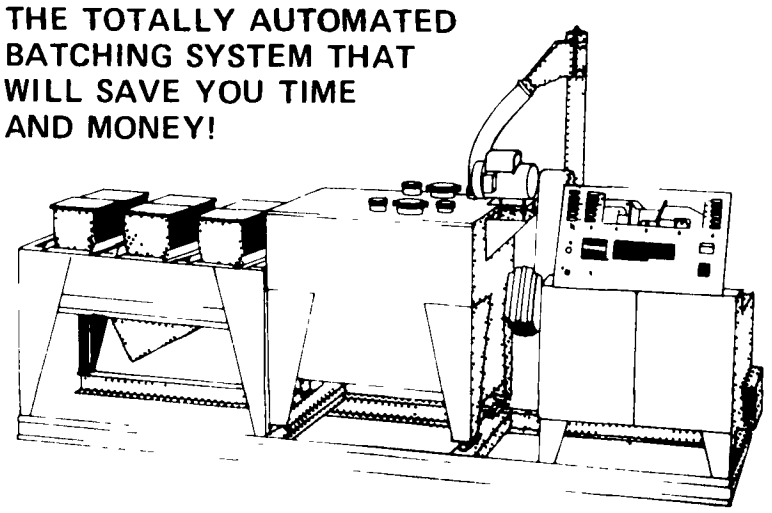
Epler's Farm Market is one of three farm markets to receive "Hall of Fame" awards from PFA. Kistaco Farm Markets of Appollo, Armstrong County, a seasonal farm market, and Soergel Orchards, a year-round market in Wexford, Allegheny County, were also honored.

Low Cost Computerized Feed-Mill With 99.9% Accuracy

Sudenga ELECTRO MILL

COMPUTA - BATCH

THE TOTALLY AUTOMATED BATCHING SYSTEM THAT WILL SAVE YOU TIME AND MONEY!



The Computa—Batch is an on-farm feed processing system that will automatically select, weigh, grind, and mix up to 12 ingredients with 99 9% accuracy. Based on tests in actual feeding situations, the Computa—Batch will save 15 to 50% in costs over a PTO mixer/grinder or buying finished feed Ask for a FREE COST COMPARISON ANALYSIS to see how much your actual savings would be

The horizontal mixer continuously produces any number of ½ ton batches The mill is available in hammer or roller styles. The "user friendly" computer stores up to 60 formulas and offers complete record keeping

Top bulls to auction block on March 29

HARRISBURG — Approximately 65 of the Commonwealth's finest performance tested bulls cross the auction block at the 12th annual Performance Tested Bull Sale at noon Friday, March 29 in the Ag Arena of The Pennsylvania State University, University Park.

According to state Agriculture Secretary Penrose Hallowell, these bulls will be screened from a group of 86 excellent bulls which recently completed tests at the Pennsylvania Department of Agriculture's Meat Animal Evaluation Center, located adjacent to the Ag Arena.

"After 112 days on test, the average daily weight gain of the animals was 3.6 pounds, meaning that the top 75 percent rated animals scheduled for sale should bring handsome prices," said Hallowell.

The sale offers purebred and commercial cattle breeders an excellent opportunity to obtain genetically superior bulls that have been evaluated for rate of gain on test; lifetime weight per day of age; feed efficiency; frame score; and structural and breeding soundness. The 86 bulls on test include 28 Polled Herefords, 28 Simmentals, 22 Angus, five Charolais, two Chianinas and one Shorthorn.

Additional information concerning the sale may be obtained by writing performance Tested Bull Sale, c/o Glenn Eberly, Meat Animal Evaluation Center, 651 Fox Hollow Road, State College, PA 16802 or phoning (814) 238-2527.

City folks find new home, business on a farmette

BY SUZANNE KEENE

LANCASTER — Less than two years ago, the Kepir family lived in Lancaster City. They operated a used car business and had no pets — not even a goldfish.

Today, Judy Kepir, her husband, Alex, and son, Kip, live on a three-acre farmette that is home for their four dairy goats, 40 rabbits, three German shepherds, one cocker spaniel, and numerous cats.

"We wanted to be out in the country away from the hustle and bustle," Judy explains. So, they sold their used car dealership, purchased a farmette near Strasburg, and began to live out their dream.

But living in the country was only part of the dream. They also wanted to open their own antique business and their farmette was the perfect place to do so. Their property includes two barns, where the Kepirs store and display their antiques, and there is plenty of room left over for their dairy goats, rabbits and pets.

"We always had in the back of our minds that we wanted an antique shop," Judy says, explaining their decision to sell the used car dealership and leave the city behind.

Judy and Alex have been collecting antiques for years and nearly all of their furnishings speak of an era gone by. Judy says they prefer unique country antiques for themselves and their antique business reflects their personal taste. Most of the antiques they have to offer are what Judy refers to as unique country in "as found" condition. City antiques, she explains, tend to be fancier and more elaborate than the country ones.

By buying and selling antiques in "as found" condition, the Kepirs say they and their customers can be certain that their purchases are genuine antiques and not reproductions. Sometimes, Judy explained, people try to pass off reproductions as genuine antiques, and, if the reproduction is well done, it is often difficult to tell the difference.

Buying from private dealers is another way to avoid falling into the reproduction trap, Judy said. "By buying that way, we have a little better chance of not getting involved with reproductions," Judy says. The Kepirs do buy most of their antiques from private individuals, but they also purchase some at auctions.

The Kepirs do not refinish any of the antiques they handle at this time. "It takes all of our energies just to get the merchandise," Judy explained.

While Alex does most of the buying, Judy is in charge of selling. They sell their antiques from the two barns on their property. One barn holds primarily furniture, while decorative antique items are on display in the other.

Judy displays a pie safe that has punched tin "windows" for ventilation.

Kip gently holds a new addition to the rabbit pen.

Judy's son, Kip, shows just how friendly the family's four dairy goats really are.

Judy Kepir poses with an antique baker's cabinet loaded with many essential baking tools.

Getting the barns ready to house the antique business was quite a chore, Judy admits. The barn that holds the decorative items was previously used as a chicken pen, so it needed a lot of cleaning. But the Kepirs made it a family project and after several weeks of hard work, the barn was ready.

The Kepirs also added new roofs to both barns and are working on restoring their farm home. They have traced the ownership of their property back to 1865, and although they know it dates back further, they haven't yet finished tracing its history.

Most of the Kepir's customers are dealers, but Judy said they are trying to generate more local retail sales. To do that Judy has composed a letter that she sends out to newly engaged couples. Judy says she is "really pleased" with the response to her letter.

"Young people are really getting into antiques," she says, noting that young people today seem to be more aware of investments than they used to be.

She says she hates to see young people spending their hard-earned money on new furniture that depreciates as soon as it leaves the store. Instead, she would like to see them invest in an antique of their choice. And, by buying an "as found" antique, she continued,

City folks

(Continued from Page B42)

they can have it refinished and stained to suit their decor.

Judy says she has also found that young couples have creative ideas of how to incorporate antiques into their homes. Some, she said, have been turning jelly cupboards into "entertainment centers" where they store their stereos, televisions, VCR's and other audio/video equipment.

Many customers are looking for ways to use their antiques, and Judy tries to come up with creative ideas for them. Some of her ideas she gets from magazines like "Country Living" and "Early American Life," but others she just thinks of herself.

For example, Judy had 30 cigar dryers to sell. When she turned them on their sides and displayed them as magazine racks, they sold quickly.

Judy says the country type of antiques are so versatile and lend themselves so easily to different decors, she finds it easy to suggest ways to use them. Tools, she said, can be displayed attractively as a wall grouping. An antique grater, can be displayed as the kitchen utensil it is or it can be turned around and used as a wall hanging to hold a dried flower arrangement.

Although Judy enjoys working with the young people, she also relishes the moments she gets to spend with older customers who come to the shop. "I like it when older people come through," she says. "It's like a trip down memory lane." And, while the older folks are remembering, Judy is listening and learning about her antiques.

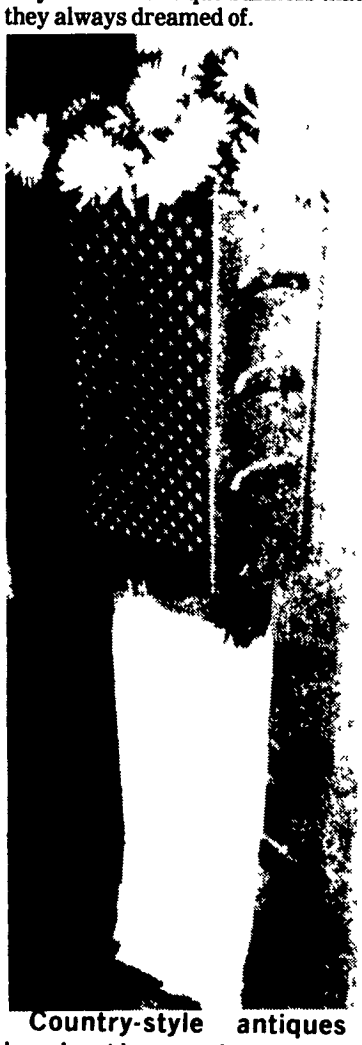
The antiques don't utilize all the barn space, and Judy says she is considering transforming the stripping room in the bottom of the barn into a dried flower shop. But, she says, that's all in the planning stage. For now, she's busy rearranging her antiques for the busy spring season.

Other barn space that isn't occupied by antiques houses four registered Alpine dairy goats and 40 mini-lop and Holland lop rabbits. The dairy goats provide milk for the family, and Judy says she is looking forward to making some cheese from the milk. "The cheese is very good," she says with a look of anticipation.

The goats started as a hobby, and still are, but Judy believes they will continue to get more.

The rabbit population also started out small, but has grown rapidly. They sell their rabbits to individuals and to pet stores.

With a farmette filled with antiques, rabbits and goats, the Kepir family has achieved a dream. They have their rural lifestyle and they have the antique business that they always dreamed of.



Country-style antiques lend themselves to decorations, Judy explained. Here she displays a grater used a wall decoration.

Read labels when buying "natural" foods

EBENSBURG — The health fiid industry has been growing as more Americans buy foods that are "natural" or "organic" or have "no preservatives added." But are so-called health foods really any better or do they just cost more? When two pounds of raw sugar cost $2.70 and the same amount of regular table sugar costs 40 cents; we need to examine what we get for our health food dollar.

Experts do not agree on a definition for natural or organic. To some people, organic means grown without pesticides or artificial fertilizers, but buying foods that are pesticide free is hard to do. Small amounts of pesticides may be found in most foods if the scientist uses today's modern equipment that measures parts per trillion.

Pesticide residues in the foods we eat have been a big issue for some time. To date, no evidence has been found to indicate that the amount of residue found in foods has an influence on cancer rates, for example. On the other hand,, organic fertilizers such as manure often contain salmonella germs that cause dysentary, and they may spread internal parasites as well.

Buyers of natural foods need to read labels. A box of corn flakes contains 7.8 percent sugar while some natural cereals contain 24 percent sugar and derive 30-40 percent of their calories from fat. Many of the popular "natural" snacks such as corn chips get their flavor from palm or coconut oil, which are among the most saturated fats available.

Before buying a food with "No Preservatives," check the labels of the other brands to see if they have preservatives. Because a food is free from preservatives does not mean it is better. Calcium propionate occurs naturally in Swiss Cheese and is used in bread to retard mold growth. In order to call their products "natural," some bakers have stopped adding calcium propionate. As a result, the consumer must take precautions when storing these baked products.

If you're going to buy natural food, you must know how to store it. Polyunsaturated vegetable oils, better for you because they lower blood cholesterol, are subject to rancidity as is whole wheat flour. Nuts and seeds also become rancid or moldy quickly.

Consumers must exercise judgment in what they do with their food, too. Turning whole wheat flour and honey into chocolate cookies instead of bread is not a healthy way to use your natural food.

Going to the health food store won't help you in the long run unless you eat a balanced diet.

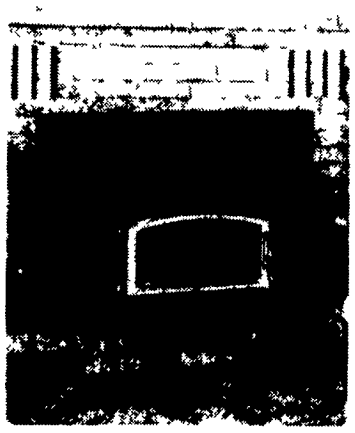
Elmira Stove Works

FIREPLACE INSERTS with ½" CAST GRATES

Heats Up To 2200 Square Feet

Optional: CATALYTIC COMBUSTOR



- 50% MORE HEAT* As the Corning Catalytic Combustor burns smoke and creosote, it creates additional heat Independent studies show that up to 50% more heat is generated from each piece of wood
- 90% LESS CREOSOTE* Condensation of smoke and gases in flue and chimney creates creosote - the primary cause of chimney fires The combustor reduces this danger because it burns most of the smoke and reduces creosote accumulation as much as 90% which also means fewer chimney cleanings

* Performance results may be higher or lower depending upon stove operation and combustor age

Ida's Notebook

Ida Risser

As you read this article, I should be enjoying the warm sunshine and beautiful beaches of Hawaii. My vacation last February in the Caribbean was so enjoyable that I've decided to try another vacation that takes me away from Pennsylvania winters.

It is a change of pace to pack shorts, sun tan lotion and summer blouses in February. I've been told that my roommate will be a lady from Lebanon County. On my last trip a woman from Lone Tree, Iowa was my companion. She had just been released from the hospital and had a heart condition. In addition she had a broken arm as she had fallen while hiking. We got along fine although I often found her in bed napping. Our cabin on the "Sun Princess" was small but pleasant.

As our Amish hired man has plans to go to Florida for two weeks the end of February, my husband will have to hold the fort down by himself. He says that at least he'll have only himself to cook for. When I went to Europe a few years ago, Cindy was home and could take care of household chores.

Just how different the weather will be in March, when I return, is hard to say. It could change a lot or we might even have a late snow storm. But for the time being, I'll simply try to prepare for a wonderful vacation.

Maybe I'd better take a book along to read on the long flight across the United States and then across the Pacific Ocean. I've been thinking of reading James Michener's "Chesapeake" for some time now but haven't even gotten around to starting it. Maybe this would be the time.

Seeing Eye seeks volunteers in Berks Co.

LEESPORT — The Seeing Eye, Inc., in conjunction with the Berks County Cooperative Extension Service is in need of 4-H age youngsters and their families to help raise Seeing Eye Puppies, which will eventually be guide dogs for blind persons.

In a 4-H Seeing Eye Puppy Club, youngsters will have the opportunity to train these special puppies for approximately one year, taking them to local 4-H meetings and activities, and teaching them basic obediance. The Seeing Eye, Inc. provides the puppies, which are German Shepherds, Golden Retreivers, or Labrador Retreivers. They also pay the veterinary expenses and provide a monthly allowance to help defray other puppy-raising costs.

A Seeing Eye, Inc. representative will visit the homes periodically to help with the care and handling of each pup. Raising a Seeing Eye puppy is a family project. As a family member, a puppy gets the confidence it needs to be a Seeing Eye dog. When it is old enough for training, it will already be adjusted to family life. Sometime between 12 and 14 months of age the puppy will return to the Seeing Eye for specialized training.

There wil be a meeting with representatives from the Seeing Eye, Inc. and their puppies, and the Berks County 4-H Agent on Saturday, March 9, from 1 - 2:30 p.m. at the Berks County Agricultural Center. All interested youngsters and their families are invited. For more information, please contact Chris States at the Berks County Cooperative Extension Service, at 378-1327.

Cure winter doldrums with seafood

If cabin fever and the down-and-out feeling that often accompanies it have struck your family, you can boost the family's mid-winter morale with a special dinner featuring luscious delicacies from the sea.

There's something about shrimp, crab, oysters and fish that transform a simple meal into an event. Prepared alone or mixed with other ingredients, seafood is a delightful way to spice up any meal.

You could try the shrimp-rice salad, the crab bisque, the salmon-cheddar quiche or any of the other tempting recipes below. Or, if you are truly a seafood connoisseur, you may want to try all of them.

SHRIMP RICE SALAD

6 large tomatoes
2 cups cleaned, peeled, cooked shrimp, cut up
1½ cups cooked rice
⅓ cup chopped celery
¼ cup ripe olives
1 tablespoon snipped parsley
¼ cup salad oil
¼ teaspoon dry mustard

With stem ends down, cut tomatoes into 6 wedges, cutting to, but not through, bases. Spread wedge apart slightly. Carefully scoop out pulp. Dice and drain pulp. Chill tomato shells.

Combine diced tomato, shrimp, rice, celery, olives and parsley. Blend together remaining ingredients and toss with shrimp mixture. Season with salt and pepper to taste. Chill.

Just before serving, spoon shrimp salad into shells. If desired, trim with watercress and additional shrimp. Serves 6.

Mertztown

CHEESE SALMON LOAF

1 1-pound can salmon, flaked
1½ cups grated American cheese
1 egg, beaten
½ cup light cream
½ teaspoon salt
1 cup bread crumbs
3 tablespoons melted butter
1 tablespoon lemon juice
¼ teaspoon pepper

Combine all ingredients. Shape into a loaf and put in a buttered loaf pan. Sprinkle with bread crumbs and dot with butter. Bake at 350°F. for 30 minutes. Serve with celery sauce.

Melt 2 tablespoons butter, stir in 2 tablespoons flour and blend well. Slowly add 2 cups milk, stirring constantly. Simmer until thick. Season with salt and pepper. Add 1 cup finely chopped celery and heat.

Mrs. Kitty Wagner
Elizabethtown

QUICK AND EASY CRAB BISQUE

1 can cream of mushroom soup
1 can cream of asparagus soup
1 7½-ounce can crab meat, drained
1½ cups evaporated milk
¾ cup light cream
¼ cup dry sherry (optional)

Mix all ingredients together and heat. Serve on hot rice or toast.

Mrs. Kitty Wagner
Elizabethtown

ORIENTAL OYSTER STEW

5 tablespoons butter
1 cup onion, sliced thin
½ cup celery, sliced thin and diagonal
2 cups bean sprouts
1 cup teriyaki sauce
1 4-ounce can mushrooms, sliced and drained
1 pint oysters and liquor
Dash cayenne

Melt butter, saute onions. Add celery, bean sprouts and teriyaki sauce. Simmer until celery is tender, stirring occasionally. Quickly saute mushrooms in a little butter in separate pan, then add to vegetables. Heat oysters in liquor until edges curl; add to vegetables. Season with cayenne. Serve over toast.

Mrs. Kitty Wagner
Elizabethtown

SALMON CHEDDAR QUICHE

Crust:
1 cup all-purpose flour
¼ teaspoon salt
3 tablespoons butter
3 tablespoons lard
3 to 4 tablespoons milk
Filling:
1 15½-ounce can salmon, drained, flaked and bones crushed
1 cup shredded Cheddar cheese
¼ cup chopped green pepper
¼ cup sliced green onion
1 tablespoon flour
¼ teaspoon salt
1/8 teaspoon pepper
1½ cups milk
3 eggs, beaten

For crust, combine flour and salt. Cut in butter and lard until mixture resembles coarse crumbs. Sprinkle with milk, one tablespoon at a time, mixing until flour is moistened. Shape dough into a ball. Roll out on lightly floured surface to form a 13-inch diameter circle. Line a 9-inch pie plate with pastry; turn under edge and flute, forming a high rim. Preheat oven to 350°F.

For filling, combine salmon, cheese, green pepper, onion, flour, salt and pepper; toss lightly to combine. Place salmon mixture in bottom of pastry shell. Combine milk and eggs; pour over salmon mixture. Bake 45 to 50 minutes or until a knife inserted near center comes out clean. Let stand 10 minutes before serving.

Enjoy the flavor of salmon in this tasty Salmon Cheddar Quiche.

TUNA RING WITH CHEESE SAUCE

1 egg
2 7-ounce cans tuna, drained
½ cup chopped onion
½ cup shredded sharp Cheddar cheese
½ cup snipped parsley
1 teaspoon celery salt
¼ teaspoon pepper
2 cups Bisquick baking mix
½ cup cold water
Cheese sauce(below)

Heat oven to 375°F. Beat egg slightly; set aside 2 tablespoons of the egg. Stir tuna, onion, cheese, parsley, celery salt and pepper into remaining egg. Stir baking mix and water to a soft dough; knead 5 times on floured cloth-covered board. Roll into rectangle, 15x10 inches. Spread with tuna mixture.

Roll up, beginning at long side. With sealed edge down, shape into ring on greased baking sheet; pinch ends together. With scissors, make cuts ⅔ of the way through ring at 1-inch intervals. Turn each section on its side to show filling. Brush top with reserved egg. Bake 25 to 30 minutes. Serve with hot Cheese Sauce. Serves 4 to 6.

Cheese Sauce

¼ cup butter or margarine
¼ cup Bisquick baking mix
¼ teaspoon each salt and pepper
2 cups milk
1 cup shredded Cheddar cheese or ½ cup crumbled blue cheese

Melt butter over low heat. Blend in baking mix, salt and pepper. Cook over low heat, stirring until smooth and bubbly. Remove from heat; stir in milk. heat to boiling, stirring constantly. Boil and stir 1 minute. Stir in cheese until melted.

SALMON NOODLES ROMANOFF

8 ounces uncooked medium noodles
1½ cups creamed cottage cheese
1½ cups dairy sour cream
½ cup finely chopped onion
1 clove garlic, minced
1 to 2 teaspoons Worcestershire sauce
Dash red pepper sauce or cayenne red pepper
½ teaspoon salt
1 16-ounce can salmon, drained, or 2 6½-ounce cans tuna, drained

Featured Recipe

This week's featured recipe comes from Judy Kepir of Lancaster. Two years ago Judy and her family moved from the city onto a three-acre farmette. They have opened an antique shop in the barns and also raise some dairy goats and rabbits.

The recipe Judy shares this week is a Hungarian recipe for chicken and dumplings that she got from her husband's mother. Judy says that traditional Hungarian chicken and dumplings doesn't call for tomatoes, but this recipe, which was adapted to suit the family's tastes, does take tomatoes. For more about Judy and her farmette, see the story about her in this week's Homestead Notes.

Chicken and Dumplings (Hungarian Style)

1 3-pound stewing or roasting chicken
1 cup water or 1 16-ounce can chicken broth
1 28-ounce can tomatoes, whole or crushed
1 pint cream, light or heavy
½ teaspoon salt
½ teaspoon pepper
1 rounded teaspoon paprika

Place chicken in a rounded pan with water or chicken broth. Roast until nearly tender. Add tomatoes and roast until chicken is tender. Remove chicken from oven, skim off excess fat and debone if desired. Add cream and stir. Add cooked dumplings.

Dumplings

5 to 7 eggs
½ cup water
2 to 3 cups flour
1 teaspoon salt

Beat eggs. Add rest of ingredients and mix well. Spoon mixture onto flat plate and scrape off into boiling water. Use a teaspoon or tablespoon to scrape dough depending on desired size of dumplings. Boil swiftly until tender.

EARLY RISER GIVES YOU MAXIMUM PERFORMANCE IN MINIMUM TILLAGE.

If you're looking for maximum performance when planting in minimum-till field conditions, International 800 Series Early Riser planters are the answer.

Side-by-side tests proved the Early Riser is unmatched for planting flexibility and you don't need costly extras. The Early Riser was number one in emergence and yield when compared to two other popular competitive planters. Even when equipped with no-till colters, these planters couldn't match the Early Riser—without colters—in minimum-till conditions.

Narrow angle, staggered double disk openers give the Early Riser a big advantage. They penetrate hard soils and slice through heavy trash easily to form an ideal seedbed. In addition, farmers found that the Early Riser adjusted faster and easier to meet different crop, population and soil condition requirements. Get an Early Riser and put maximum performance to work for you in conventional-till, minimum-till and no-till field conditions. See us today for details.

Early Riser Planters

Seafood

(Continued from Page B4

½ cup shredded sharp Cheddar cheese

Heat oven to 325°F. Cook noodles as directed on package; drain. Mix noodles, cottage cheese, sour cream, onion, garlic, Worcestershire sauce, red pepper sauce, salt and salmon. Place about 1 cup salmon mixture in each of 5 or 6 greased baking shells or individual casseroles. Sprinkle with cheese. Bake uncovered 20 to 25 minutes. Makes 5 or 6 servings.

CRABMEAT AU GRATIN

1 pound crabmeat lumps
2 tablespoons butter
2 teaspoons shallots or onions, finely chopped
1 tablespoon flour
½ cup half-and-half cream
1 tablespoon Worcestershire sauce
1 dash tobasco sauce
¼ cup dry white wine
1 tablespoon lemon juice
Salt to taste

Saute the shallots in butter until golden brown. Add flour and cook the mixture a few minutes, then remove from the heat and let cool. Add the cream and cook a little longer to make a light cream sauce. Add crabmeat, Worcestershire sauce, tobasco sauce, wine, salt and lemon juice. Mix lightly with a large spoon, taking care not to break up the crabmeat lumps. Spoon the mixture into a casserole dish, sprinkle with bread crumbs and butter and brown under the broiler until golden. Serve hot.

BROILED SALMON STEAKS, SPANISH STYLE

4 salmon steaks, cut 1-inch thick
¼ cup lime juice
¼ cup lemon juice
½ cup salad oil
¼ teaspoon crushed chili peppers
½ teaspoon garlic salt
1 teaspoon dehydrated onion flakes
1 tablespoon minced fresh parsley

Place steaks in a flat glass dish. Combine remaining ingredients, pour over steaks and marinate 1 hour. Drain, discarding marinade. Place steaks on a broiler pan. Preheat broiler. Broil 3 inches below source of heat for 10 minutes, turning once. Steaks are done when fish flakes easily with a fork. Makes 4 servings.

CHEESE SHRIMP TRIANGLES

1 cup (4 ounces) shredded Cheddar cheese, at room temperature
¼ cup milk
1 4½-ounce can medium shrimp, drained, rinsed and cut up
¼ cup finely chopped green pepper
2 tablespoons finely chopped onion
1/8 teaspoon basil
8 slices toast
Softened butter
Pimiento-stuffed olive slices

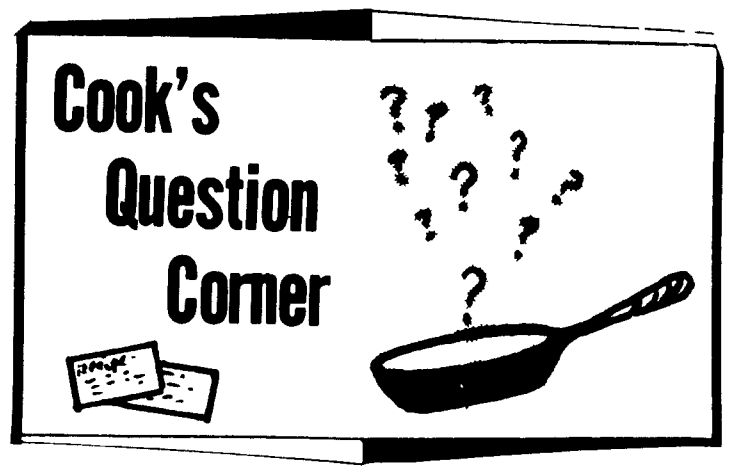
Beat cheese; gradually add milk and beat until smooth. Stir in shrimp, green pepper, onion and basil. Remove crusts and butter toast. Spread about 2½ tablespoons cheese mixture on each slice. Cut crosswise to form 4 triangles. Garnish with an olive slice and whole shrimp, if desired. (This will require an additional can of shrimp.)

CRAB GUMBO

1 piece ham hock
1 pound (or more) medium shrimp
1 pound (or more) crab meat
½ pound fresh okra, chopped
4 cloves garlic
4 cups onions, chopped
1 cup green pepper, chopped
1 cup celery, chopped
¾ cup flour
2 teaspoons bacon drippings
1 tablespoon crab boil
1 tablespoon salt
4 bay leaves

Boil the ham hock in three quarts of water for two hours and set it aside. Brown onions and garlic in bacon drippings, then add flour, stirring constantly. Add your mixture to 2½ quarts of water, then add green pepper, celery, salt, bay leaves and crab boil. Boil gently for 1½ to 2 hours. During the last hour of cooking, add the okra, then add at least 2 quarts of the stock from the boiled ham hock (skimming off excess grease beforehand).

When ready to serve, add shrimp and crab meat and boil for 15 minutes. Be sure to cover with liquid. Serve your Crab Gumbo over rice. This recipe will serve 6 to 8 hungry people.



QUESTION - Lydia Weber, Reynolds, would like some blue fish recipes.

QUESTION - Mae Pugh, Chambersburg, would like a pizza crust recipe.

QUESTION - Emma Sue Martin, New Holland, is still looking for a recipe for coffee cake that has a pie filling center and is made with yeast. She would also like a recipe for custard filling for doughnuts.

Hunterdon Extension offers gardening programs

FLEMINGTON, N.J. — A seminar on beginning vegetable gardening will lead off the Hunterdon County Extension Service Home Garden Programs this spring. This first meeting, on Tuesday, March 5, 7:30 p.m. at the Extension Center on Route 31, north of Flemington, will cover the basics for getting a good start growing vegetables.

William McIntyre, former Hunterdon County agricultural agent and Martha Maletta, horticultural consultant will lead the discussion. There is no fee for this program, but pre-registration is requested. Registration is limited.

During April, the series will continue with lectures and seminars on lawn care, birds, organic gardening, and tree disease. Contact the Extension Service for details on these programs and to pre-register. Call (201) 788-1338 or write: 4 Gauntt Place, Flemington, New Jersey 08822.

Enjoy potatoes during Potato Month

EBENSBURG — This is the time of year when menus are planned around good, inexpensive stick-to-the-ribs food. And one of the basic ingredients of such menus is the potato.

February just happens to be Potato Lovers Month, sponsored for the past seven years by the Potato Board. Many retailers are likely to take part in the promotion again this year, so if you see special potato displays, posters, and recipe and nutrition pamphlets in the produce department, you'll know why.

Nationally, growers raised six percent more potatoes than the year before. Some of the increase may have been to cash in on the fast-moving national trend of serving baked potatoes and potato skins in fast-food and full-service eateries.

The supply situation is a little different closer to home. Here in Pennsylvania, growers harvested the same number of acres as last year, but because of favorable growing conditions the supply ended up 20 percent greater than a year ago. Because of the more favorable dollar exchange rate, another problem that growers in the Northeast face is the intense competition from Canadian potato imports. There are many opportunities for retailers to put potatoes on special in the weeks ahead.

The grading system for potatoes leaves most consumers mystified. Pennsylvania law requires that pre-packaged potatoes display a U.S. quality grade. The most common grade is U.S. No. 1, while the premium grade is called U.S. Extra No. 1. Lesser grades include U.S. Commercial and U.S. No. 2, which are not generally available in retail stores. If the potatoes cannot meet the standards for any of these grades, then they must be marked Unclassified.

The U.S. No 1 grade consists of potatoes of similar varietal characteristics that are firm, fairly clean, fairly well shaped, and generally free from damage. Since potatoes are grown by nature, not all potatoes are perfect. Potatoes are graded by humans, who are known to make mistakes. Sometimes potatoes with defects or damage do get by graders, so the U.S. No. 1 grade makes allowances. A total of eight percent of the potatoes, in a representative sample of a lot or load, may have defects. A cut or bruise requiring more than five percent waste to cut out would be considered a defect.

The variation in the size of potatoes within a bag can also upset consumers. Grading for size is not mandatory, except that they must be at least one and seven-eights inches in diameter. There is no maximum size specified.

Among the more than 30 billion pounds of potatoes that will find their way to market in one form or another this year, more than two-thirds will be the Russet Burbank. About one-fourth will be varieties of round whites and less than five percent will be round reds.

Comsumers are likely to think of russet potatoes as Idahos, since almost all Idahos are Russet Burbanks. However, not all Russet Burbanks are grown in Idaho. Russet potatoes are long and cylindrical, sometimes oblong. They have shallow eyes and heavily netted skins. They're ideal for baking. The russet's high-starch, low-moisture content makes it mealy and more dry than moist inside. It's that mealy-dryness that makes for fluffy lightness.

Here are some fine points from the Idaho Potato Commission to get the best-baked potato. They say, "spare the-foil or spoil the potato." The much too prevalent custom of wrapping a potato in aluminum foil ruins the potato's texture because it steams rather than bakes. The moisture is retained rather than driven out, leaving a soft wrinkled skin instead of the desired crisp skin. If you want the skin a little softer, rub a little salad oil (some say bacon grease) on the outside of the potato before baking.

The next step involves pricking the potato with a fork a few times. Three on the top and three on the bottom is enough. This allows the steam to escape and prevents the potato from exploding.It will also make for a drier, mealier texture to ensure fluffiness in the perfect baked potato.

To test the potato for doneness, put on an insulated mitt and pinch it. If it feels soft. it's done. You can also check the inside with a fork.

The Commission suggests another step, which is caled the crisscross-pinch technique. As soon as the potato is baked to the soft-to-the-touch stage, take it from the oven and cut an "X" in the top with a fork. Idaho experts would never dream of opening a baked potato with anything but a fork, held lightly in the hand to avoid tamping down the fluffy, delicate interior.

Then they push some of the potato through the top with slight pressure of the fingers on the peel so that some of the snowy inside shows. This will help the fluffing process by releasing steam.

The potato is now ready to accept just about any topping you can think of.

Fisher named Blair Co. extension agent

HOLIDAYSBURG — Beth E. Fisher has been named home economist and assistant extension agent in Blair County, W. Wayne Hinish, associate dean and associate director of the Cooperative Extension Service, announced earlier this month.

Fisher is responsible for the adult and youth program development, volunteer recruitment and training, and family living education in Blair County.

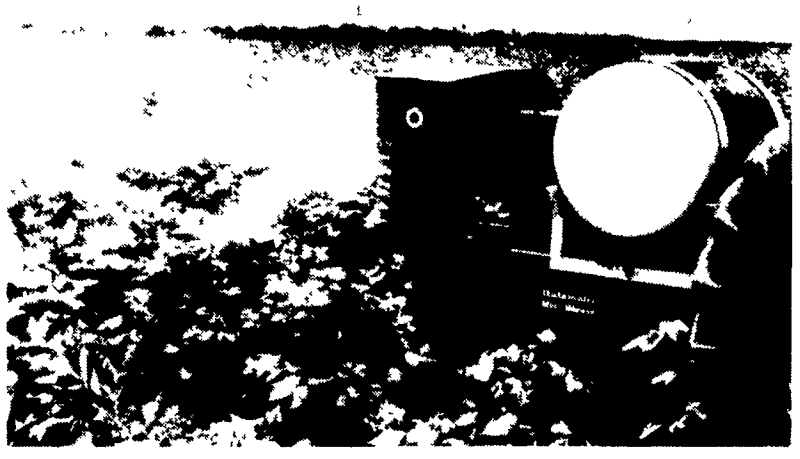
"Generally, I'll be responsible for all home economics and 4-H programs in the county," Fisher says.

Originally from Dover, Pa. she earned a bachelor's degree in 1977 and a master's degree in 1982, both in education, from Indiana University of Pennsylvania. She worked with Penn State's Cooperative Extension Service in York as an Extension assistant from 1977 to 1979.

Fisher also worked as a salesclerk in Zolinger's Department Store in York, as a teacher in the North Star School District in Boswell, and as a teller for the National Bank of Commonwealth in Indiana.

She is a member of the Indiana Junior Women's Civic Club.

Automatic Micro-Mist Sprayer Controls Droplet Size



The Automatic Micro-Mist Concentrate Sprayer can be powered by the tractor pto for use on rowcrops, vegetables and orchards.

The Automatic Micro-Mist Concentrate Sprayer is a faster, more efficient, economical alternative to conventional boom and aerial spraying of rowcrops, vegetables and orchards.

It takes mist blowing techniques a step further by giving the operator the ability to control the diameter of the spray droplets and choose the diameter best for each particular spraying application.

Controlling droplet diameter results in increased effectiveness and reduced materials cost.

The smaller droplets of the Micro-Mister coat all sides of the target evenly, due to the powerful turbulence produced by the unit. The Micro-Mister effectively coats the undersides of leaves, reaches inside trees, even coats the back sides of fruit.

The compact size and the utilization of chemical concentrates by the Micro-Mister offers many advantages. The unit comes in models that can be powered by PTO on small tractors, or a gasoline powered skid unit that slides into the bed of any pickup. Because the Micro-Mister eliminates the need for cumbersome water hauling equipment that requires additional manpower and time-consuming stops for refilling, the Automatic Micro-Mister saves both time and money.

The Automatic Micro-Mister can offer effective coverage up to 250 feet, depending on application, and can operate at speeds up to 12 m.p.h., with no dangerous overspray or drift.

Kid's Korner

Did you know....

Pennsylvania pigeons are literally burning bridges behind them, reports National Wildlife magazine. Apparently, pigeon droppings mix with rain to form acids potent enough to eat through steel girders. According to state bridge engineer Jerry Jackson, over several decades the droppings rot the steel, weakening structures to the point where a weight limit must be imposed or the bridges closed altogether.

xxx

The largest bird in the world, the ostrich, is a strange bird, says International Wildlife magazine. A male ostrich typically stands seven feet tall, weighs 260 pounds, runs up to 50 miles an hour with strides as long as 15 feet and packs a kick of up to 500 pounds per square inch. Yet, the bird stops when a person waves a thorn-tree branch in its face.

xxx

An aardvark's tongue can be up to 18 inches long, says National Wildlife's Ranger Rick magazine. Covered with sticky saliva, this long tongue helps the aardvark lap up termites, ants and other insects.

xxx

San Franciscans have voted to prohibit construction of any high-rise building that would cast "significant" shadows over public parks, says the National Wildlife Federation. About 200 parks, playgrounds and squares will be affected by the new law.

xxx

According to NASA scientists, the Atlantic Ocean is widening by six-tenths of an inch each year, reports International Wildlife magazine.

xxx

The world's largest bee, last spotted in 1859, has been rediscovered in Indonesia by a University of Georgia student, reports International Wildlife magainze. The bee, which grows to the size of a small hummingbird, "blundered into me," says entomologist Adam Messer, who has since located seven colonies of the bees on three islands.

Riddles....

Q. A duck, a frog, and a skunk went to the circus. The tickets were a dollar. Who got in and who didn't?

A. The duck got in because it had a bill. The frog got in on its "greenback." But the poor skunk had only a (s)cent, and it was a bad one.

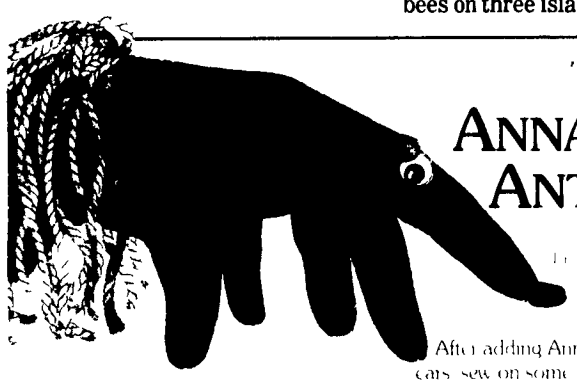
Q. What did the otter say when it disagreed with someone?

A. "Sorry, but I think OTTER-wise."

Q. What do you call a rhinoceros that agrees with everybody?

A. A rhiYESceros.

Drawings by William Barron



ANNABELLE ANTEATER

It couldn't be winter without losing a glove. So by now you must have a left over lying around. But don't throw it away! Instead make Annabelle Anteater.

After adding Annabelle's eyes and ears, sew on some yarn for her trailing tail. A stitched fingertip forms her snout.

Now put your hand in the glove and let your fingers do the walking.

Get rid of unwanted moisture in your home

BY SALLY BAIR
Staff Correspondent

LANCASTER – The trend toward insulating homes for maximum energy conservation is contributing to the problem of unwanted moisture in homes. Dr. Phyllis Marcus, extension housing specialist at the Pennsylvania State University, said recently. "The moisture problem started after we started to button up our houses with insulation. We created indoor air quality problems."

In a super insulated modern home Marcus said air exchanges per hour may be .05 to .30, while in a typical older home it could be 1.0 to 3.0. She added, "We are victims of the 'sick building syndrome,' which comes from trapping air pollutants indoors."

Unwanted moisture manifests itself in many ways, from mild annoyance to serious problems like deterioration of woodwork and paint.

Marcus explains that condensation will occur on any surface that is at or colder than the dew point temperature which is when the air contains as much moisture as it can hold. Marcus added that a drop in temperature can change both the relative and absolute humidity.

She showed statistics that point out that heat loss in the winter is 33 percent through the roof, 24 percent through the walls, 30 percent through the doors and 13 percent through the floors. By contrast in the summer, heat gain is 60 percent through the roof and 40 percent through the walls and windows.

Marcus noted that windows can never have the same R value as walls, and said that windows should be opened occasionally in the winter.

Moisture is generated in homes in many ways, including cooking, bathing, laundering, houseplants, window coverings and many other normal household activities. Showers will add from ¼ pound to ½ pound of moisutre to the air, and bathing will add 1/16 to 1/4 pounds. A wringer washer puts 4 pounds of moisture in the air and an automatic washer puts in a very small amount.

In a family of four, breathing will add six pounds of moisture per day. If there is groundwater within 18 feet of the crawl space, of a 1,000 sq. ft. home, it will add 19 gallons of moisture per day.

Proper attic ventilation requires inlets at the eaves and outlets at the ridge. In flat roofs, the vents should be placed even at the eaves, Marcus said. A good system is using soffit vents in the gable end and roof caps with soffit vents. The best system is using ridge vents and soffit vents.

Marcus said that basements should also have cross ventilation.

Vapor barriers should be placed on the warm wall, not the cold wall she cautioned. "Different materials absorb mositure more readily than others."

What to do with the mildew that forms from unwanted moisture? Marcus said that it is possible to buy paint with mildew retarder, but she suggests adding to each gallon of regular paint 1/2 ounce of leichloride of mercury and 2 ounces of denatured alcohol.

She suggested using chemical moisture absorbers like silica gel or activated alumine in closets or dresser drawers. Calcium chloride will provide protection also.

Shrubs close to the house can also contribute to moisture problems.

Marcus said that 30-50 percent relative humidity is a comfortable range for humans.

BIG ALFALFA YIELDS?

Plant OLYMPIC.

Olympic Alfalfa's high resistance to disease and overall hardiness has made Olympic a preferred variety among growers seeking high alfalfa yields.

Proven high yields over a wide area
Olympic Alfalfa has produced over 10 tons/acre in several trials

High resistance to anthracnose
Anthracnose is a hidden blight in alfalfa that's a threat wherever warm, humid conditions persist during the growing season It can reduce forage yields by as much as two tons per acre per year Olympic Alfalfa's resistance to this yield stealer is as good as any variety needs to be in any environment

Excellent overall disease and insect protection

Anthracnose	Bacterial Wilt	Pea Aphid	Spotted Alfalfa Aphid	Resistance
				Very High
				High
				Mod High
				Moderate
				Mod Low
				Low
				Very Low

Moderate winterhardiness
For it's primary area of adaptation, Olympic Alfalfa's winterhardiness is fully adequate

Fast growth; early maturity
Olympic Alfalfa matures about 5 days ahead of Vernal

Farm Women Societies

Lancaster Society 2

Lancaster Society 2 met at the home of Ruth Waltz with 24 members present.

The banquet will be held March 9 at the Leola Family Restaurant. The group is also planning a bus trip to "Three Little Bakers" on July 17.

The county project as voted by Society 2 is the Cancer Society. Farm Women is Oct. 14. The Lancaster County Picnic will be held on July 12 at Hoffman Park in Quarryville. Good Will dolls date is July 12. Jackie Byer is heading the project of dinner at Pam's Pantry and a tour of the Lancaster post office.

The group gave contributions to the dairy princess program and to the Dilbert Flowers Fund Marguaritta Torres reported on the state convention held in January.

At the evening session, 150 students from Manheim Central School were in concert under the direction of Mrs. Jean Thomas. A blind young man played the piano. James Singer of Manheim spoke on "Hate Your Mistakes — Not Yourself."

The next meeting will be the spring banquet at the Leola Family Restaurant.

Lancaster Society 18

Lancaster Society 18 met recently at the Hempfield Church of the Brethren with Mrs. J. Wilbert Carper as hostess.

Judy Leaman presented the program using phyllo for a variety of dishes — hors d'euvres, main dishes and desserts.

Plans were finalized for sewing at Lancaster General Hospital on March 4; entertaining guests at Conestoga View on March 21; and entertaining Farm Women #13 on March 16 at a salad luncheon at the Farm and Home Center.

Lancaster Society 22

Lancaster Society 22 met on Feb. 12 at the home of Gwen Martin, with Mary Young as co-hostess.

The program was "Shoebox for Liberty." Speaker was Mrs. Jean Niemeyer and she also showed slides of Honduras. Jean and her husband, Dr. Richard Niemeyer, volunteered in Honduras this past summer.

The society made up 10 shoeboxes to be sent to Honduras. The next meeting will be on March 12, at Willow Street UCC Church. They will entertain Society 17.

Berks Society 5

Berks Society 5 met on Feb. 14 at the home of Mrs. Nan Feeg, Womelsdorf.

New member Karen Sattazahn was initiated and welcomed into the group. President Carolyn Feeg conducted the business meeting. Members are planning a ham on roll sale on March 23 as a money raiser. Some members will also be selling Stanley Products.

Members finalized plans for their 20th Anniversary Celebration on March 12. The location of the celebration has been changed from the Womelsdorf Elementary School to the Large Group Instruction Room of the Conrad Weiser High School.

Following the business meeting, February and valentine refreshments were served by hostess Mrs. Nan Feeg.

The next meeting after the anniversary celebration will be at the home of Mrs. Grace Carvell, Richland, on April 2. Members are asked to decorate an Easter egg for roll call.

Chester Society 3

Chester Society 3 held their February meeting at the home of Jessie Groff. Minutes were read and secretary Thelma Blevins took roll call.

The treasurer's report was read by treasurer Ruth Whiteside and bills were paid. Report of the Farm Show visitation was given by delegate Jean Yarnall. County by-laws were read and minor business discussed.

Bingo games were enjoyed by all present. Refreshements were served by the hostess and co-hostess.

Lebanon Society 20

Lebanon Society 20 held a Sweetheart Banquet on Feb. 11 at the Fredericksburg Fire Hall.

Game winners were Carol and Jay Hershey, Sarah and Ed Funck; Pat and Earl Ziegler; June and Yale Zimmerman; and May and Lester Stamm.

The safety program and installation of new members will be held next month in the home of Pat Ziegler.

Farm woman works to educate public about ag

BY BARBARA RADER
Staff Correspondent

GROVE CITY — A belief that farm women do not know how to inform the general public about agricultural issues has led Carol Ann Gregg to take an active role in agricultural functions.

Recently elected to serve a two-year term as third vice-president of American Agri-Women, Gregg says she wants to get information about agriculture to the public.

With a desire to disseminate information about agriculture, Gregg joined the Penn-Agri Women six years ago, gaining an automatic membership in the American Agri-Women at the same time. She was elected to a two-year term as secretary of the state organization. Her term of duty will expire in October when a new secretary is elected.

Gregg is involved in other agricultural organizations as well. She has been an active member of the Mercer County PFA since the mid 1960's and currently acts as county public information director.

Possessing a bachelor's degree in education from Slippery Rock College, Gregg serves on the Governor's Agricultural Task Force in the classroom. With the help of other Mercer County farm women, she has presented a variety of helpful programs to school children.

Her involement in the task force began in 1983 when Secretary of Agriculture Penrose Halowell and Secretary of Education Bob Scanlon appointed the force.

Gregg says her interest in the education program has grown in the last several years as it became more established. Her hope, she says, is that Pennsylvania students will be required to learn about the state's agriculture.

Because the number of farms is decreasing, she explains, fewer people will know where their food comes from. However, she hopes to combat that problem by presenting programs about agriculture to school children.

Public relations for agriculture has always been a priority for this dairy farm wife, who attends as many agricultural meetings as she can fit into her schedule.

Gregg carries a heavy schedule. She is a free-lance writer and has produced a weekly column during the last five years for the "Allied News" in Grove City entitled "Agriculturally Speaking." Her goal is to have her articles published in national publications and to reach the widest possible audience.

Gregg's busy schedule allows little time for hobbies, but when time allows, she enjoys baking, ballet, and theater. She also finds time to take charge of calf raising on their dairy farm and is active in her church and community. She is just completing a term as president of the women's association of East Main Presbyterian Church, Grove City, where she also serves as an elder.

She is also very active in the Grove City branch of the American Association of University Women. As a past president, she edited their news letter for about three years.

Shortly after graduating from college, Gregg married her husband, George, who was already in a partnership operation with his father. "I met George through 4-H and I always felt the farmers were the ones with the values," she says.

Gregg did some substitute teaching while her two sons, Paul and Tim were growing up. Paul is now a junior at Grove City Area High School and Tim is a senior there.

During her 21 years as a dairy farm wife, Gregg has observed many changes. They live on her husband's home farm which includes 172 acres the family acquired in 1944. A 180-acre farm in Slippery Rock was purchased when Geroge's brother decided to come back home. This created a three-way partnership with each partner having certain reponsibilities to make the farm prosper.

They rent additional acreage, increasing their total number of acres to 500. They raise all their own forage, corn and hay. Their only feed purchase is the dairy supplement for their 75 grade cows. Another 55 head of replacement heifers are in Carol Ann's care.

During the first three weeks of the cow's lives they are fed whole milk twice a day. Then for the next week, she feeds them milk replacer twice a day. The following week they receive milk replacer once a day.

When the calves are three weeks old they are fed a calf pellet for about four months, while getting second crop hay as well. Next, they get a 16 percent protein feed that is grown on the farm.

Gregg is also responsible for the morning milking. She performs this daily chore in a doube six Herringbone parlor. The parlor and 107 free stalls are two major changes the Gregg's have made in the farm since their marriage.

But Gregg stresses that living on a farm is not a necessary requirement for membership in many agricultural organizations. "You don't have to be a farm woman, just interested in agriculture to be a member of Penn-Agri Women," she says. "You automatically become a member of Agri-Women when you join and receive up-to-date newsletters from both organiztions."

Currently most of the membership is in the mid-west, but Gregg says she would like to see more farm women from the east become involved in the organization.

The two organizations are currently concerned about two major issues. One of these issues is cruelty to farm animals. The public needs to be more aware of the facts on this situation, Gregg stressed. And, she continued, being a part of agriculture brings a responsibility to inform the public about this issue.

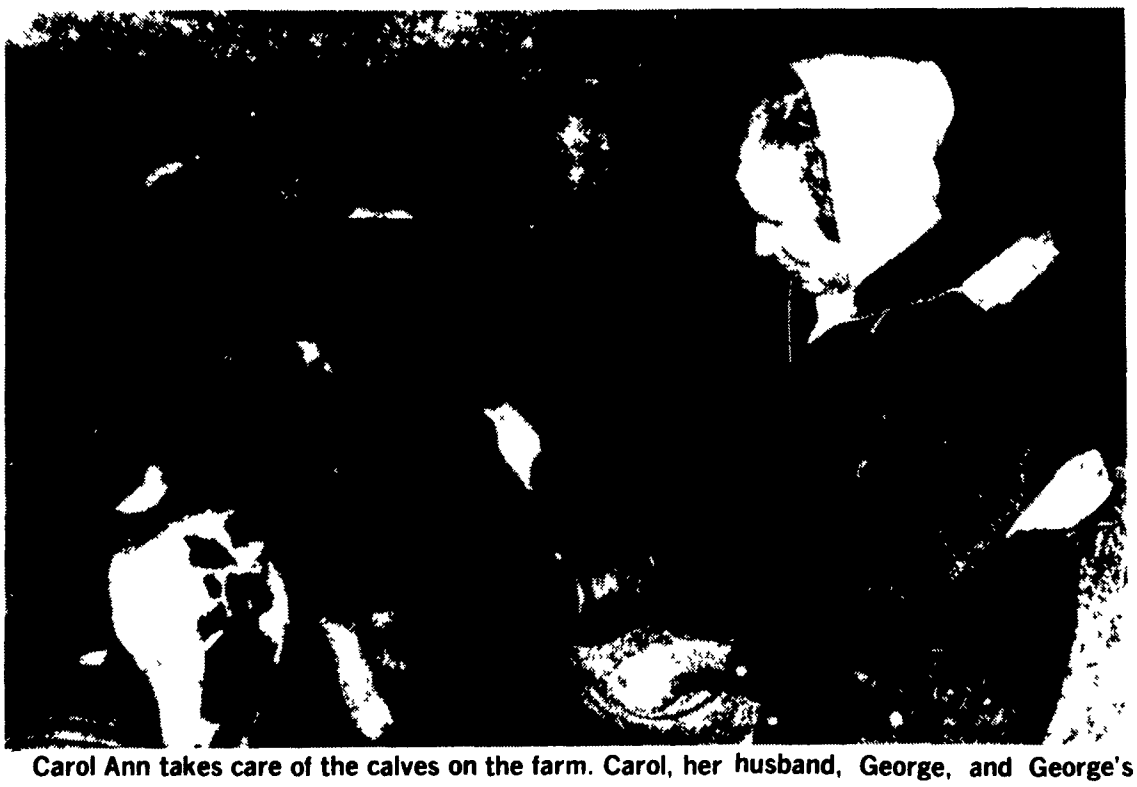
The second issue is the Pesticide Information Program. Gregg said it is important for farmers to be more aware of the chemicals they use and they must help the public understand why chemicals are used on the farm.

The organization aims to train farm women to understand agricultural issues so they can speak knowledgeably about them to others.

Carol Ann Gregg sits at the desk where she writes public relations news and a weekly column called "Agriculturally Speaking" for a local paper.

Carol Ann and her husband, George, stand in their double six Herringbone milking parlor.

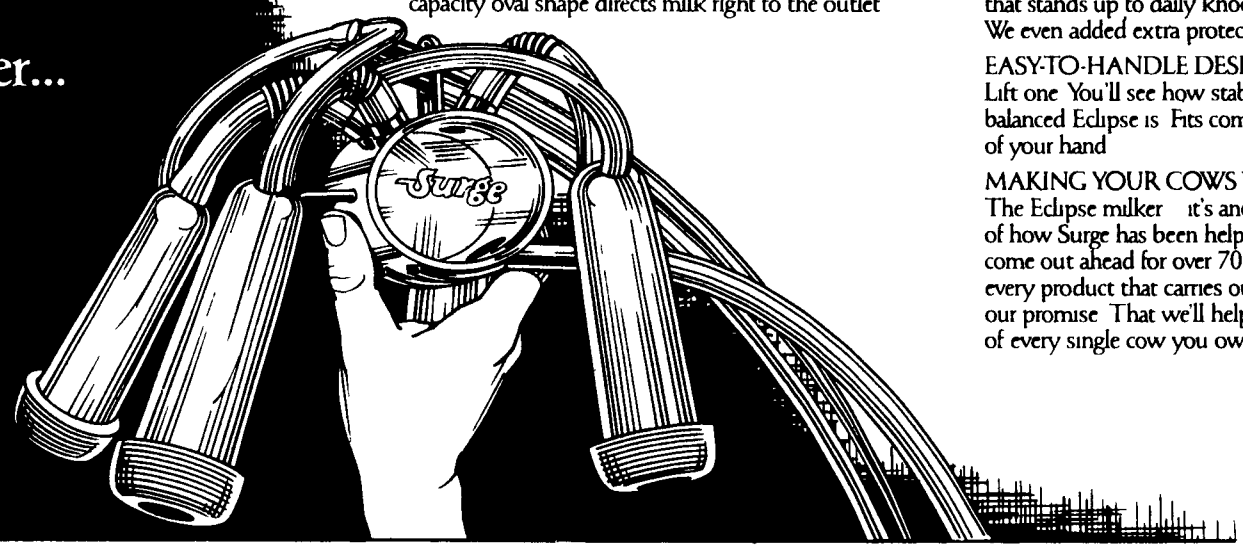
Cleaning the milkers and the milk house is another of Carol Ann's responsibilities.



Carol Ann takes care of the calves on the farm. Carol, her husband, George, and George's partnership.

A new way to make your cows worth more

The Eclipse milker... high capacity that fits in the palm of your hand.



We can make your cows worth more. SURGE

When cows milk faster and easier your whole operation is more efficient

Introducing the Surge Eclipse milker specially designed to help you stay efficient To stay profitable

UNIQUE OVAL DESIGN
Eclipse gets the job done quickly Because the high capacity oval shape directs milk right to the outlet

So it gets into the pipeline faster Smoother With less swirling

Plus, Eclipse adapts more easily to a variety of udder shapes and sizes Even low-slung cows

HEAVY-DUTY DESIGN
It's a solid milker With a stainless steel body that stands up to daily knocks and bangs We even added extra protection on the bottom

EASY-TO-HANDLE DESIGN
Lift one You'll see how stable and well-balanced Eclipse is Fits comfortably in the palm of your hand

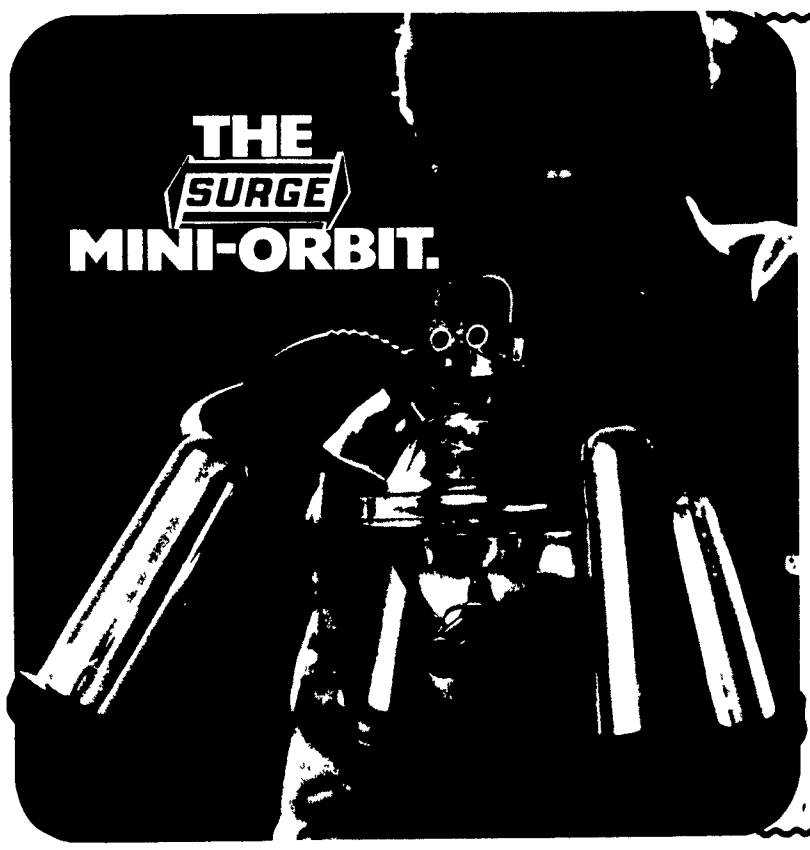
MAKING YOUR COWS WORTH MORE
The Eclipse milker it's another fine example of how Surge has been helping dairymen come out ahead for over 70 years Because every product that carries our name also carries our promise That we'll help you get more out of every single cow you own

NOW A CHOICE!

★ **ALL NEW DESIGN... ECLIPSE**
- Heavy Duty Commercial Claw

OR

★ **PROVEN MILKING SUPERIORITY... MINI-ORBIT**
- Fast, Gentle Standard Duty Claw



SURGE MINI-ORBIT

The best lightweight, high capacity milker Surge has ever designed. A full pound lighter than our popular Mini-Cup II, yet its 39 cubic inches give it more capacity than any other claw-type milker.

The Surge Mini-Orbit is also easier to carry, easier to attach and remove. Fits right in your hand.

Visibility's better, too. And larger, repositioned nipples coupled with larger stem inflations, proper balance and low center of gravity assure faster, more equal milking action.

We can make your cows worth more. SURGE

THE MICRO WAY

LANI BLOOMER

Microwave fish for Lenten meals

Fish is a popular meal during Lent's meatless days, and it is one of the easiest foods to cook in your microwave. Fish cooked in a microwave has a delicate flavor and is very moist and juicy (unless it is overcooked!). In fact, if you are used to dry fish, you (like a man in one of my classes) might think the microwaved fish isn't done because it is so juicy!

Here are the different ways you can cook fish in your microwave. Adapt your own favorite recipes for the microwave, using the techniques and times here to cook them. Then enjoy moist, wonderfully flavored fish.

All fish should be defrosted before cooking. The only exception would be precooked, frozen fish sticks or patties that just need reheating. If you cook fish while it's still frozen, the outside will be overcooked before the center thaws and cooks.

Do not defrost fish completely in the microwave, or the edges will start cooking. Partially defrost on low (defrost, 30) for 5 minutes per pound and let stand for about 5 minutes. Separate pieces, and finish defrosting on the counter or under cold running water.

Leave fish uncovered, or cover it loosely with a piece of wax paper. Cook it 4-5 minutes a pound on high for fillets. If you are baking a whole or stuffed fish, it would be better to cook it on medium power (50) for 8-10 minutes per pound. This gives heat time to reach the center evenly. Cover whole fish with wax paper. Let fillets stand for 2-3 minutes; let a whole fish stand for about 5 minutes.

Don't use liquids in the pan, unless you are putting a tablespoon or two of lemon juice, wine, etc. on the fish for added flavor. Cover the pan with vented plastic wrap (leave a little corner open) or a lid. If you are steaming the fish on top of chopped vegetables, cook the vegetables first for 5-6 minutes per pound before putting the fish on top. Steam the fish for 4-5 minutes per pound for fillets. Let stand 2-3 minutes.

Poaching: Much less water is used for poaching fish in the microwave than on the range. Use only 1/4 to 1/2 cup liquids to mix with the spices. If you need more liquid to make a sauce after poaching, use the amount needed for the sauce.

In a flat dish just large enough to hold the fish, heat the liquids, spices, and vegetables (if used), until boiling. Add the fish and cover with a lid or vented plastic wrap. Cook on high for 5-6 minutes per pound for fillets, or 8-9 minutes per pound for a whole fish. Let stand 2-5 minutes depending on size of fish pieces.

Fried: Melt 1-2 tablespoons butter or margarine on a preheated browning grill and fry fish uncovered (or cover with a paper towel to prevent spatters) on high. turn fish over when juices start to appear on top. Your browning grill directions will give you times for preheating and cooking.

Reheating: Breaded fish should be heated, uncovered, on a rack or "bacon cooker" type pan to prevent sogginess. Breaded coverings will not be crispy when heated in the microwave. One pound of frozen fish sticks will take 10-12 minutes on medium (50,5) to thaw and heat. Using the lower power gives the center time to heat evenly. If you have only high power, heat for 5-6 minutes per pound, but let the fish stand for a few minutes halfway through the cooking. Most packages have microwave directions on the boxes. If your favorite brand doesn't, write to the manufacturer and ask for them (the address is usually on the box). Unbreaded fish will reheat more evenly if you cover it while reheating.

Here are a few miscellaneous tips for cooking fish in the microwave and an easy sauce recipe you might want to try for variety.

–For cooking, arrange the fish in a single layer, with the thicker portions to the outside. Overlap or shield very thin areas. Halfway through the cooking time, rearrange the pieces, if necessary, for even cooking. Turn large whole or stuffed fish over once during the cooking time. Fish should flake easily after a standing time of 2-5 minutes. It is easily overcooked, so time it carefully.

– Sprinkle a little white wine, vermouth or lemon juice over the fish before cooking. This gives fish a delicate flavor without such a fishy odor or taste.

– Fish cools quickly, so cook it just before serving. If you have other foods (potatoes, vegetables, etc.) to cook in the microwave, cook them first, and cook the fish last, while the other foods stand.

– To remove strong odors from your microwave, combine 1/2 cup water, 1 tablespoon lemon juice and 2-3 whole cloves in a one cup measure. Boil for 2-3 minutes. Wipe moisture from inside oven and let door stand open for a short time.

The following recipe for Lemon Dill Sauce is similar to tartar sauce, but has a different flavor. It can be served cold, hot, or spread on top of fish fillets before baking.

Lemon Dill Sauce

2 tablespoons butter or margarine

1 teaspoon dried dill weed (not seed)

Juice and grated rind from one lemon

1 cup mayonnaise

Melt butter in a 2-cup measure, stir in dill and lemon, then mayonnaise, stirring until smooth. Make the sauce ahead of time to let the full flavor develop. Chill, or heat before serving as desired. Makes 1 1/4 cups. Note: The cooking times above are for microwaves with 600-700 watts of power. For 500-600 W ovens, add 10 second to each minute; for 400-500 W, add 20 seconds to each minute.

Low blood sugar doesn't always mean hypoglycemia

SOUTHHAMPTON –ave you complained lately of weakness, headache, anxiety, fast heart action, hunger sensations, sweating? And has someone told you that these are the symptoms of hypoglycemia?

'Tain't necessarily so! Hypoglycemic reactions, says Dairy Council Inc., Southampton, do not necessarily indicate the presence of this chronic illness.

Hypoglycemia means abnormally low blood sugar. Lots of conditions are diagnosed as hypoglycemic, but may be temporary rather than persistent low blood sugar.

Just what is hypoglycemia? It is a persistent, chronic low blood sugar condition that results from a serious dysfunction of the pancreas or liver–organs which are involved in the use and control of our body fuel. The condition occurs when the body becomes unable to process carbohydrates properly. It cannot regulate insulin release and thus maintain adequate blood glucose levels.

One type of temporary hypoglycemia reaction is caused by fasting. It can occur at night or just before breakfast. The low blood sugar symptoms are identical to the true chronic illness, but are a result of inadequate energy intake–a temporary condition that clears up as soon as food is taken.

A temporary low blood sugar level after a meal has been seen among certain types of people–especially thin, nervous women. Even some healthy people do not consume enough calories at lunch, and often find themselves out of energy and lightheaded by three o'clock.

Skipping meals can bring about these symptoms, too. Generally a balanced diet from the four food groups–milk, meats, fruits and vegetables,, and grains–in the recommended servings for adults of, respectively, 2-2-4-4, will eliminate temporary bouts of low blood sugar reaction.

A Mayo Clinic research project has found that chromium intake may help some people who complain of hypoglycemic symptoms. The average human being needs to absorb only 1 mcg. each day of chromium; this mineral is needed by the body in miniute amounts. It is found in meats, poultry, fish, whole grain breads, cereals, cheese, nuts, dried fruits, and some vegetables.

These studies showed that ingesting chromium raised glucose levels in people, and seemed to alleviate hypoglycemic signs. However, this research remains at a very preliminary level of investigation.

In the meantime, says Dairy Council, a balanced diet of regularly-spaced meals three times a day should help reduce any symptomatic reactions. If symptoms persist, however, it is wise to consult a physician.

HOW TO STRETCH YOUR EQUIPMENT DOLLARS

When you have mountains of manure to move, you can rely on Sperry New Holland spreaders and skid-steer loaders. Their productivity, dependability and versatility make them a smart investment.

SUPER BOOM LOADERS

They're the skid-steer loaders with more forward dump reach than conventional loaders. You get reach that lets you fill the biggest spreaders from one side, plus a sure-footed stance with a longer wheelbase and a lower center of gravity than other loaders.

MORE THAN A MANURE HANDLER

No matter which "Super Boom" loader you choose, you'll find it does hundreds of jobs around the farm. It's so versatile, you'll use it every day for loading, lifting, digging, feeding, cleaning. There's no end to the chores it can do.

VERSATILE SPREADERS

All Sperry New Holland box spreaders are well known for fast, efficient spreading of solid manure. Now, with special slurry side extensions, they can handle sloppy, runny manure. The "fishbowl" shaped side extensions splash liquid back toward the center of the spreader. Our New Slurry Tank Spreader and our Flail Tanker also provide the same versatility. If you've got a lot of real soupy manure to handle these would probably suit you best. But these machines will also handle solids as well Ask your Sperry New Holland Dealer for a demonstration today.

BONDED PROTECTION

Sperry New Holland offers you "Bonded Protection" on all box spreaders. That means you get free sides if those on your Sperry New Holland box spreader rust through while the rest of the spreader still works. Even if you buy the spreader used.

BEST VALUE PACKAGE

No one builds equipment better than Sperry New Holland. And no one backs up the sale as well either. Quality parts and service, excellent trade-in value, Bonded Protection, a one-year/500-hour warranty on loaders, and a two-year warranty on spreaders. That's all part of the best value package you can buy.

Before you buy, see the dealer with the best total deal. He sells Sperry New Holland.

The craft market is introducing many new products for the active hobbyist this year.

Some of the most exciting items are in the form of rub-on transfers, Images Transfer Act, introduced by Meyercord. The colorful transfers come in 12 different designs. The end results look like hand-painted folk art – the kind of painting that most people are convinced they never could do.

Past experience in painting or even a steady hand is not necessary. These transfers work the same way as Press-type and can be applied to any hard surface such as wood, plaster, medal, tin or glass.

Walnut Hollow Farm offers a wide array of woodcraft products suitable for transfer art. You can choose from wooden planks, clock faces, boxes and wooden country plates.

Before beginning a project you should make sure the surface is clean and smooth. A wood surface should be sealed, stained or painted. Next lightly sand with fine sandpaper to ensure an extra-smooth application. Check to see that the surface is dry and dust free. Now you are ready to begin.

Your next step is to remove the protective backing, but be sure to save this sheet for storage of any unused transfers. Carefully cut around the designs you wish to use and arrange them in a design suited to your surface.

Once an attractive design has been decided on, use an applicator (a tongue depressor, scissors handle or spoon) to rub thoroughly over each element of the transfer.

For large designs, rub continually from the center out. Start at a corner and carefully peel the sheet away. Continue to rub lightly, just ahead of the peeling procedure. If you miss part of the design, replace the sheet and rub hard again.

These dry transfers also can be applied to surfaces that will be separated such as box covers and cabinet doors. Simply rub the transfer down as if it were a continuous surface and then cut with a sharp knife between the two sections.

A final finish is recommended to seal the transfer. Clear varnish or acrylic sealers are good for glass, ceramic or tin.

Walnut Hollow Farms also produces an excellent finish called Flair Finish for any painted wood projects. It is clear drying, water based, non-yellowing, waterproof and dries to the touch in only 15 to 20 minutes. You can dry or wet sand in between coats for a professional-looking finish.

For those who prefer an antiqued look, acrylic paints in any shade of brown will do the trick nicely. Apply the paint to a cloth and gently rub the entire area of the project. Using a clean cloth, wipe away the center areas and the edges until the desired effect is achieved. Allow the paint to dry and finish as described above.

Look for Images Transfer Art and Walnut Hollow Farm products at your local craft store.

A windbreak can help save energy

FLEMINGTON, N.J. – When strong winter winds howl against your windows, it is easy to recognize the value of a well-designed windbreak planting.

A properly located windbreak can be a real asset throughout the year. In winter, a windbreak can decrease your heating bills, reduce drafts, and decrease winter injury to outdoor plants. In summer, it can increase the usefulness of your outdoor living area, screen out undesirable views, and act as a sound buffer or barrier. When carefully designed, windbreaks won't reduce your ventilation during the summer.

Windbreak plantings create a protected pocket of windless space around your house which acts as a layer of insulation in the cold weather. It is important to create your windbreaks from plants which can withstand the harsh elements they are intended to block.

Look for plants with dense twigs and foliage with strong branches that form a thick growth even (in the case of deciduous trees and shrubs) when they are bare. Evergreens make the best windbreaks since they will reduce the wind more than deciduous trees. Pine, spruce, hemlock and arborvitae make excellent plantings.

Now is an ideal time to plan your windbreak, even though planting should wait until spring.

American Cheese Society to meet in June

ASHFIELD, Mass. – The Third Annual Meeting of the American Cheese Society, June 16 to 18, will offer a unique opportunity for all those interested in natural cheese to meet people and hear papers from all sides of the industry in the heart of Pennsylvania Dutch dairy country.

Among those attending will be home cheesemakers and gourmets, dairy scientists, specialty cheesemakers, retailers, distributers and marketers, extension agents, authors, technical experts and equipment dealers.

Scheduled tours will include local cheese plants, a Pennsylvania Dutch farm without electricity, farmer's markets and Pennsylvania Dutch shops in some of America's best farmland.

Olivia Mills, England's sheep dairying expert, will describe what could become a new small farm enterprise in America.

Participants are invited to send or bring their best cheeses for judging by a panel of experts.

On Sunday and Tuesday afternoons tours of cheese plants and local attractions will be offered. Lectures will be presented all day Monday and Tuesday morning. Social events and cheese tastings will be held Sunday and Monday evenings.

The program and registration form can be obtained by writing Dr. Dick Kleyn, Department of Food Science, Rutgers University, New Brunswick, N.J. 08903. A discount will be offered on registrations received prior to June 3.

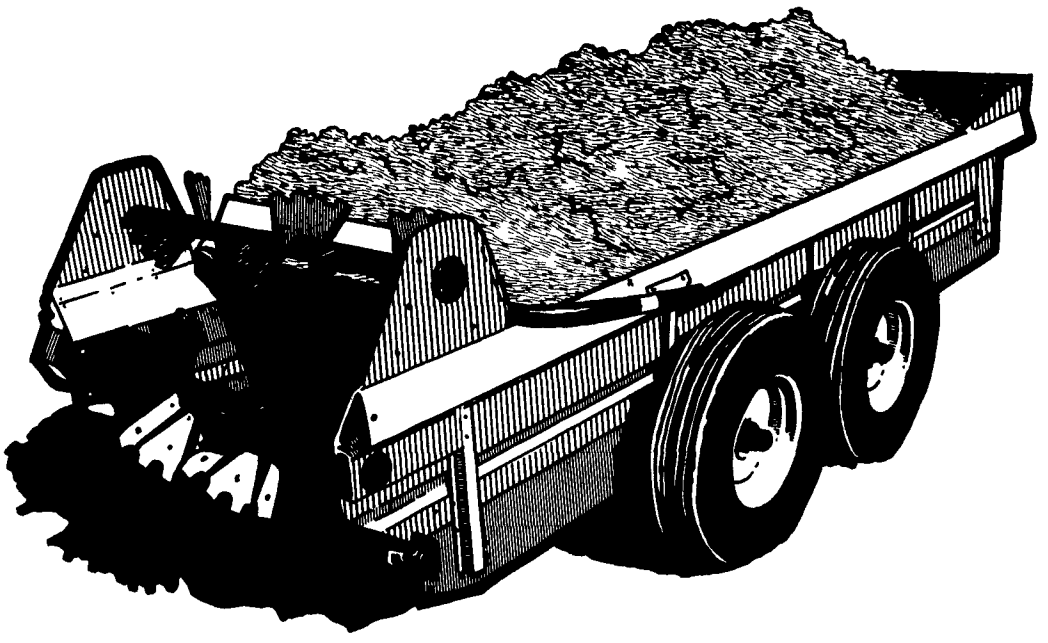
Old Joe would be proud . . . In 1899 "Old Joe" Oppenheim built the first manure spreader and founded New Idea farm equipment. His plan . . . build a top quality spreader and sell a lot of them at a price farmers can afford.

Since then, more farmers have owned more New Idea spreaders than any other brand.



In 1985 the New Idea plan hasn't changed . . . build top quality spreaders and sell a lot of them at prices farmers and ranchers can afford.

Check our new low prices. Save up to $2,200 off the 1984 prices. This year and every year for years to come . . . we're out to sell more spreaders than any other manufacturer.

Ladies Have You Heard?

By Doris Thomas

Lancaster Extension Home Economist

CLEANING UP HELPS PREVENT HOME FIRES

Dispose of ordinary trash and rubbish regularly. Keep attic, basement and closets free of accumulations of old clothing, mattresses, curtains, drapes, lamp shades, newspapers, and books.

Hang up oily mops and keep oily rags in closed metal containers.

Empty ashtrays only when the contents are completely cold, and use ashtrays large enough and deep enough to keep burning cigarettes from falling out.

Have your heating equipment checked and cleaned at least once a year.

Check appliance and extension cords regularly for broken or frayed insulation and loose connections, and replace promptly when faulty.

Store paints and solvents away from heat, and dispose of empty and nearly empty containers promptly.

Keep garage free of clutter, and store gasoline only in tightly capped, clearly marked metal cans–never in glass jars or jugs.

Keep the kitchen range clean of grease spatters; exhaust ducts should be cleaned out so smoke can travel through them easily; keep the fan and suction mechanism and other parts of the exhaust hood over the range free of grease.

Include the outside as well as the inside of your property in the spring clean-up schedule, so dry leaves, grass and branches left after winter's storms do not become fire hazards.

Acting on these hints will mean more safety for your family.

PEAR CARE

Delicious, refreshing pears are a delicious treat at any time–eaten out of hand or in combination with other foods. And now is an especially good time to try them in traditional as well as new ways because they are in plentiful supply.

What should you look for when buying pears? And what is the best possible way of preserving them for as long as possible?

First, it is important to remember that pears are picked mature but not ripe. They reach ideal ripeness with a finer flavor and smoother texture when ripened at home at room temperature. A fruit bowl is perfect for this purpose. If stored in a plastic bag, it should have a few holes for adequate circulation. Pears ripen from the inside out and should not be kept until soft on the outside. A well-ripened pear is firm and yields slightly to gently pressure at the stem end. When ripe, keep pears cold and humid and use as quickly as possible.

If you plan to use the pears for cooking or baking, they should be firm and slightly underripe.

When choosing pears, remember that big, plump ones are preferable. When shopping for pears you may notice minor surface blemishes or russeting on the skin. This is perfectly natural and characteristic of certain varieties; it doesn't affect the fruit's delicate taste. In fact, some russeted pears are the most luscious.

Here are a few ideas on interesting uses of pears:

– Halved and cored pears make natural fruit boats for stuffing with cottage cheese, dates and nuts, or other mixtures of diced fresh fruits.

– For a gourmet treat, serve fresh pears with a wedge of cheese.

– Make a pear ambrosia with diced pears and orange sections. Sprinkle with grated coconut. Serve as a salad or dessert.

Fresh pears are doubly delicious in a salad with avocados. Brush fruits lightly with fresh lemon juice. Arrange pear and avocado wedges on lettuce leaves. Drizzle with fresh orange and lemon juice.

Farm Women's Forum planned for April

WASHINGTON, Feb. 8–"Reach Out–Speak Up for Agriculture: Farm Policy" will be the theme for the U.S. Department of Agriculture's 5th Farm Women's Forum April 24-26 at the Capitol Holiday Inn here.

"With critical problems currently facing agriculture," Secretary of Agriculture John R Block said, "it is crucial that producers and non-producers alike understand the importance of having an effective and equitable farm policy."

"Farm women," he said, "are in an exceptional position to convey this vital message. As producers, they are aware of the industry's problems and needs. And as active and contributing members of their communities, they are keenly aware of the relationship between producer and consumer."

Block said the purpose of the forum is the same as earlier forums: To give information and encouragement to farm women as they meet the challenge of telling agriculture's story.

The forum program will include government experts and representatives from public and private organizations. They will provide practical, usable information on such topics as communication skills, key agricultural issues, farm legislation and policy, commodities and foreign trade.

The forum is open to all women involved in agriculture. They need not be representatives of farm organizations to attend. However, because of space restrictions, participation will be limited to 250 on a first-come-first-served basis, with consideration for geographical representation.

Applicants will be asked to pay a $25 reservation fee, which will be refunded at registration. Housing, meals and transportation expenses must be paid by the participants.

Applications must be received by March 11. Registrants for whom space is available will be notified by March 18.

For more information on attending the 1985 forum,, contact: Farm Women's Forum, Office of the Secretary, Public Liaison, U.S. Department of Agriculture, Washington, D.C. 20250. the telephone number is (202) 447-2798.

Extension offers help to backyard farmers

WEST CHESTER – Have you ever been shocked by the prices at the supermarket? Have you ever paid good money for "fresh" fruit or vegetables only to find they were less than fresh? If the answer to these questions are yes, then a seminar series entitled "Living on a Few Acres" may be for you.

On Tuesday nights in March and April from 7:30 to 9:30 p.m., Penn State Cooperative Extension Services of Chester and Delaware Counties will run a seminmar for those people with an acre or more of ground who are seriously considering trying to raise or grow food for their family. This includes those interested in fruits and vegetables or livestock or both.

Five of the nine nights will cover topics related to the production, storage and preservation of fresh fruits and vegetables. Good production of fruits and vegetables starts with good soil fertility management and a working knowledge of lime and fertilizer. Next, proper selection of varieties, proper planting techniques and timing, and adequate maintenance must be provided to get a profitable yield. Finally, proper storing or preservation of your produce are essential if your efforts are to be made worthwhile.

Many people are interested in raising their own meat and dairy products for their own consumption. However, they often lack the basics of feeding and managing animals to make this a profitable venture. Through this seminar, backyard farmers will learn the basics of raising meat and dairy producing animals and whether or not such operations will be profitable for home food production.

Seat belts are a must for children

NEWARK, Del. – Small children need special protection when riding in a car. It is the driver's responsibility to provide that protection. Many states now have laws that require the use of seat restraints for all children from infancy to four years of age in a moving automobile.

"Whether or not you're wearing your own safety belt, you should never ride in the front or back seat of a car holding an infant in your arms," warns Debbie Walker, extension family living agent for Delaware State College. "If there's a sudden stop or collision, the baby could be thrown from your arms into the windshield or dashboard with great force. And in a second collision, your body could crush the baby. Second collisions occur 1/10 of a second after the car has hit another car or object, as the impact throws unbelted occupants into the windshield, steering wheel, doors, dashboard or other hard interior surface."

According to Walker, second collisions are more dangerous to small children than to adults. For this reason, youngsters or infants should not be allowed to kneel or stand on car seats, sleep in a rear window ledge or climb about in a moving car. In fact, they should never be allowed to travel unrestrained in an automobile at any time. For added protection, children should ride on the back seat.

However, the seat belts designed for adult passengers offer little protection for small children, whose pelvic bones aren't strong enough to withstand collision force. For this reason, Walker says standard lap belts should not be used for children under age four, or weighing less than 40 pounds. And children less than 55 inches tall should not wear shoulder belts. They'll be much safer in the special restraint devices designed for them.

Child restraints can be bought in the parts departments of some new car dealerships and in many retail stores. In Delaware, these restraints can also be borrowed from the Office of Highway Safety and from county social service centers. Loans are made on a yearly basis. The borrower pays a deposit of $10, half of which will be returned at the end of the year. The other $5 is kept to defray costs.

In Delaware, child car restraints are available from the Sussex County Service Center in Georgetown, the James Williams Service Center in Dover, the Hudson Service Center in Newark, and the Northeast Service Center in Wilmington.

Infants can have whole milk before first birthday

SYRACUSE, NY – Whole cow's milk can become a safe and nutritious part of a baby's diet by six months of age, according to the American Academy of Pediatrics. Previously, the academy had recommended that parents wait until baby's first birthday to feed cow's milk.

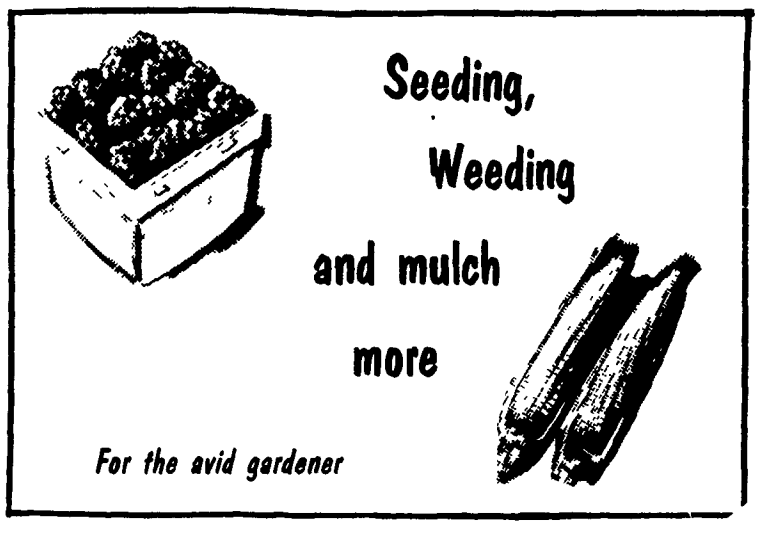
The AAP recommendation represents a review of many infant feeding studies. One study in particular, done by Samuel Fomon, M.D., of the University of Iowa Hospitals and Clinics, clearly showed that cow's milk can be safe for babies younger than one year.

"Dr. Fomon demonstrated that healthy infants as young as about five months can consume whole cow's milk without ill effects," explained M.F. Brink, Ph.D., president of National Dairy Council. "He found no health differences that could be attributed to feeding practices when comparing babies fed either cow's milk or commercial formula."

Fomon is currently working on a National Dairy Council-sponsored project that will reveal more about cow's milk in infant diets – including how milk consumption affects a baby's iron needs.

According to the AAP, babies can consume cow's milk at six months of age as long as their diets include foods such as iron-fortified cereal, fruits and vegetables. Babies should not be fed skim milk or other low-fat milks, the academy advises.

Fomon found that infants fed skim milk as a main part of their diets did not gain weight as rapidly as babies fed either a commercial formula or whole cow's milk.



Plan your garden now, before it's planting time. this will insure maximum production from the land you have available, reminds Jeff Jabco, Delaware County Extension agricultural agent.

Planning means knowing what you want to plant and where you will plant it within your garden plot. Develop a balanced garden by having the three main groups of vegetables – root crops, fruit crops and leafy crops – well represented. It won't pay you to grow crops which use a lot of space and yield little in comparison if you have a small garden. Keep in mind you can grow tomatoes in any garden. But what you plant depends mostly on what your family prefers to eat.

After you've decided what to plant draw a plan to scale on paper that outlines the size of your garden, the kinds and varieties you want to plant, their location, amount of each you want to plant, their location, amount of each you want to grow, spacing needed, direction of the rows, date when each crop is to be planted, and whether you will use succession or companion cropping.

Jabco suggests you rotate crops within the garden from year to year, and if possible, rotate the garden site itself. Or perhaps, divide the garden site in half and keep half the garden in soil-improving crops

Plant long rows to save you time in care and cultivation. You may plant several crops in the same row if the distance between rows is about the same. Plant tall crops, such as sweet corn, pole beans, or staked tomatoes together. Where possible, plant them on the side of the garden where they won't shade other lower-growing plants.

Planning is important because a poor job of planning often leads to haphazard care and poor results.

On being a farm wife - And other hazards

Joyce Bupp

YORK — What could have been more welcome about now than this week of relatively-open, comparatively-warm weather?

How delightful to head for the barn under golden, if somewhat anemic, sunshine, wearing a mere two layers of clothing instead of waddling out to chores well-rounded by six layers of garments.

(While designers think they invented the "layered look," it was actually frozen farm wives helping with mid-winter barn chores who originated this fashion style.)

The blanket of white that had seemed as though it would hang around until June has mostly vanished, leaving behind a patchwork of dusty, leftover drifts, jagged chunks deposited by snow plows, hidden patches of ice in shady places, and flattened remnants of dried grass, corn stubble and soybean stems.

Maybe it's the tides, or the lengthening days, or the moon, or whatever, but suddenly I've been awash in this inner drive to clean things up.

With brightening days and the flood of sunshine into the house, I shudder when looking at the supposedly-white, ruffled tie-back curtains which frame our old-fashioned bubbly-paned farmhouse windows.

While we love the steady and homey warmth of the basement woodstove, what it does to white curtains is depressing - almost unspeakable. They almost cry out in pain to be relieved of the sooty, dusty burden of dirt, hung out in a spring breeze to flap dry and then be rehung in renewed glory.

Reluctantly, I resign my neat-and-tidy inner drive to the realism that this job must wait until the woodstove goes into seasonal retirement. Instead, focusing on other, more realistic, clean-up jobs serve as an accession to this uncontrollable urge to dust and scrub.

Swipes at the grimy cobweb fringes that accent the corners of rooms and shimmer in window frames provide a bit of temporary victory. And, when the pressure cooker blows its lead safety plug, and sprays a mist of chicken-fatted steam over the kitchen ceiling and cupboards, a couple of more layers of household greasy-grime get prompt attention.

Even the cattle seem to sense an urgency to be about and doing things, and the heifers kick their heels with extra friskiness as we scatter a fresh layer of straw over the deepening accumulation of winter bedding.

Clean-up time especially applies to the yard, after last week's rain and snow-swollen flooding brought rivers pouring around both sides of the house and threatened for a time to baptize the front door entrance.

But the backyard river bottom has finally dried up, leaving behind a wealth of the township's road gravel and assorted trash that joined it when the trash pickup service arrived two days late - after the cats had investigated the bags out waiting for the roaring truck.

Still, daffodils and iris are poking up through the soggy, leaf-strewn perennial border and wiry stems wave above the runoff-flattened grass.

I never thought a patch of green wild garlic could look so inviting.

Two sweetners make winning combination

MEDIA — Teamwork is the key when it comes to sweetening foods, says Extension home economist Greta C. Vairo. Until recently, saccharin has been the most widely used low-calorie sweetener on the market. But a new sweetener, aspartame, has now joined saccharin on the supermarket shelves.

These two sweeteners work well together, Vairo says. Many diet sodas are sweetened with a combination of the two because the sweetness of the two together is greater than the sum of the sweetness of each individually.

The strengths of one sweetener make up for the weaknesses of the other. This results in products that are better tasting and safer for adults. These low-calorie products are also less expensive to make.

In the 1960's saccharin and cyclamate were used together and resulted in diet products with less aftertaste. But cyclamate was removed from the market, leaving saccharin as the only low-calorie sweetener sold.

With the development and approval of aspartame, adults could again enjoy products with litter after taste and few calories. The safety of these artificial sweeteners has not been confirmed for young children and pregnant women. These groups should exercise caution.

York 4-H Council

The York County 4-H Council met on Feb. 6 at the 4-H Center near Bair. Reports were given on the Baby Beef Banquet and the Farm Show.

County Council will sponsor a skiing trip to Ski Roundtop on Feb. 17 from 4 p.m. to 10 p.m. They will also sponsor a dance on May 4 at the 4-H Center. 4-H'ers from surrounding counties have been invited to attend.

County Council will sponsor a raffle table at the 4-H Auction on March 15. Members are urged to get donations to support the raffle.

The next meeting will be held on March 6 at 7:30 at the 4-H Center. A drug and alcohol abuse program is planned.

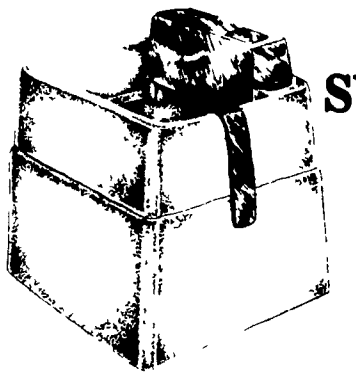
NEW PRODUCTS

NOW AVAILABLE FROM AGRI-CONCRETE



The All New
SUPER BOWL E-80
Built To Last

- Reinforced Precast Concrete
- No More Rust
- No More Corrosion

A full 1" of high density styrofoam insulation coated with a reflective foil gives you the most efficient use of energy needed. A high capacity ¾" valve gives quick recovery. This plastic valve resists corrosion and is very easily serviced without the use of tools. The adjustable thermostat and element are located beneath the bowl. This effectively reduces the possibility of "stray voltage." This method of "heating through the bowl" is especially well adapted to precast concrete Concrete itself is a good conductor of heat and at the same time is a poor conductor of electricity Our concrete bowl, because of its mass will retain heat for a longer period of time. This effectively reduces the frequency of use of the heating element and thermostat, and maintains a very uniform water temperature.

Give your beef program the Scotch Highland advantage.

Scotch Highland Beef Cattle used for cross breeding give excellent x-cross results because of their lean & well marbled carcass. Breed into your cattle program their hardy, docile & easy calving traits.

Region's farmers handle debt loads well, Baltimore banker says

BALTIMORE – Agriiculture continues to be a strong and viable enterprise in the mid-Atlantic region according to Gene L. Swackhamer, President of the Farm Credit Banks of Baltimore. The Banks serve farmers and agricultural cooperatives in the states of Delaware, Maryland, Pennsylvania, Virginia, and West Virginia, and in the Commonwealth of Puerto Rico.

Swackhamer's statement came in the midst of numerous reports of the deteriorating financial conditions of farmers and some agricultural lenders across the country.

"Year-end reports for our Banks and 26 affiliated Federal Land Bank Associations (FLBAs) and Production Credit Associations (PCAs) show earnings of $36.6 million on a total agricultural loan portfolio of some $3.1 billion. Losses for 1984, while more than we like to see, total less than 1 percent of the loan portfolio. Delinquencies in all three Baltimore Banks accounted for less than 1 percent of all dollar volume of outstanding loans."

Swackhamer added, "Despite continued low commodity prices and relatively high production costs our Federal Land Bank Associations in the states showed a farm loan delinquency rate of only 4.9 percent of borrowers at year-end, the same rate as in 1983. Our PCAs reported a 3.6 percent delinquency rate as of December 31, 1984, a decrease from the 4.0 percent delinquency rate of a year earlier."

The strength of agriculture in the Baltimore Farm Credit District is somewhat in contrast with severe economic problems faced by farmers and their lenders in other regions of the country.

"Our farmers have most certainly not had an easy time, they are experiencing financial stress, but most have been able to cope with the current adverse situation," he said. "Other regions, of the nation are having much more difficulty keeping farms operating profitably and this is having a direct and severe impact on their lenders."

Swackhamer cited the following reasons for the more stable financial position of most farmers in the Baltimore Farm Credit District:

• A diversified agriculture which tends to balance agricultural income over the region as opposed to areas where income is based largely on the production of a limited number of agricultural products.

• Farmers in the mid-Atlantic region have greater opportunities to generate additional income from off farm sources, such as full or part-time jobs in the business communities.

• Land values in the Baltimore District have tended to be less volatile because of urban, industrial, and recreational influence.

• Shipping and handling costs are reduced for agricultural products in the mid-Atlantic states because they are relatively close to large and major markets.

• Borrowers in the mid-Atlantic region have tended to assume a more conservative debt posture than those in other regions of the country.

Swackhamer noted that complete financial information on the Baltimore Banks' performance in 1984 will be available in the Banks' annual report, which will be released after March 1st.

The Farm Credit Banks of Baltimore are part of the nationwide Farm Credit System, the country's largest private cooperative lending institution. With more than $3 billion in outstanding loan volume, the Banks extend long-term credit through the Federal Land Bank of Baltimore and affiliated FLBAs; short-term credit through the Federal Intermediate Credit Bank of Baltimore and affiliated PCAs; and credit to agricultural cooperatives through the Baltimore Bank for Cooperatives.

Cost share funds available for tree planting

LEESPORT – Donald E. Lutz, Chairman of the Berks County ASC Committee, has announced that cost share funds are available under the Agricultural Conservation Program (ACP), minimum one acre, and the Forestry Incentive Program (FIP), minimum 10 acres, to plant trees or improve woodlands to provide a future stand of desirable trees intended for timber production, pulpwood, posts, or other uses and to provide soil protection.

Some landowners have a few acres that might be better suited to production of trees than crops. Cost shares for tree planting are 65 per cent of cost, not to exceed $70 per acre. Trees are available from the Berks County Conservation District at the Berks County Ag Center, (Phone 372-4655) or from DER, PA Bureau of Forestry, (phone 215-469-6217) or other private sources. Applications to buy trees are available for both public groups at the Berks County Ag Center. Free professional assistance is provided by DER, Bureau of Forestry.

The PA Bureau of Forestry is also assigned the technical responsibility for the ACP and FIP cost-shared practices to improve a stand of forest trees. Forest Tree Stand Improvement practices are designed to increase timber growth and quality on sites suitable for the production of sawtimber and veneer logs. Generally, young thick stands of trees 4 to 12" in diameter that need thinning, pruning of crop trees, and releasing of desirable seedlings and young trees are likely to be authorized for cost sharing. Land owners can earn 65 per cent of the cost, not to exceed $100 per acre, of eligible practices completed under the direction of the Bureau of Forestry.

Applications for cost shares must be signed at the Agricultural Stablization and Conservation Office in the Berks County Agrr-cultural Center, R1, Leesport, across from Berks Heim. Call the Berks County ASCS Office at 372-4655 for further details.

Massey-Ferguson introduces combine coating

DES MOINES, Iowa – A polyurethane paint originally developed for commercial and military aircraft and space shuttle fuel tanks is now being used on all North American combines produced by Massey-Ferguson.

The finish is tough, durable, flexible, easily maintained with just soap and water and is resistant to farm fluids such as diesel fuel, engine oil, brake fluid, antifreeze, gear oil and hydraulic fluid, according to Massey-Ferguson product marketing man

"The polyurethane greatly increases the trade-in value because the combine keeps its new look for years," he adds.

Additionally, the new finish has superior scratch and abrasion resistance as well as outstanding corrosion resistance. Conventionally finished farm equipment held up only 200 hours under salt spray and humidity tests, but the polyurethane coating exceeded 1,000 hours of exposure without blistering, peeling or softening.

Accelerated weathering tests and actual Florida exposure confirm the long-term durability. The polyurethane, which reflects a mirror sharp image showed less than a two percent gloss change after 1,000 hours of exposure. No gloss remained on conventionally-painted equipment tested under the same conditions.

Although the new finish is more costly per gallon, one-third less paint is used compared to the paint previously applied to Massey-Ferguson combines.

U.S. sets ag trade record — for imports

WASHINGTON — America set a record last year in agricultural trade, but the record was on the import side.

Economist Charles Goode of USDA's Economic Research Service reports that U.S. imports of farm products were valued at $18.9 billion in fiscal 1984. That's up $2.5 billion from 1983's total and about $1.6 billion above our previous import record set in fiscal 1980.

The accelerated inflow of imports, however, is not limited to farm products. U.S. imports of nonagricultural goods jumped to $295 billion, up from $229 billion in 1983. The United States, says Goode, is accounting for a major share of world growth in imports as the economic recovery has increased the incomes of Americans and stimulated consumer demand for domestic and imported products.

Another key factor, of course, is the international role of the U.S. dollar. The high foreign exchange value of the dollar has raised prices for American goods on world markets and lowered prices for foreign goods on the American market. That has hurt U.S. exports and boosted U.S. imports, says Goode.

The dollar increased in value during 10 of the 12 months of fiscal 1984, reaching an 11-year high against the German mark and setting all-time highs against the British pound and the French franc. Many analysts warn that continued strength in the value of the dollar will mean continued penetration of domestic U.S. markets by imported products–nonagricultural and agricultural.

In addition to the U.S. recovery and value of the dollar, Goode cites other reasons for the fiscal 1984 increase in our agricultural import bill. Freezes last winter in Florida and Texas led to increased imports of fruits and orange juice. Also, several popular imports carried higher price tags, which boosted overall spending by Americans on coffee, rubber, fruit juices, vegetable oils, and cocoa products.

Major farm products on the U.S. import list in fiscal 1984 included:

- Coffee imports worth about $3.3 billion, 18 percent above 1983's total. Brazil was our top supplier.
- Vegetables and preparations with an import value of $1.3 billion, up 25 percent. Mexico was the major source.
- Fruits and preparations, which rang up a bill of $1.3 billion, an increase of nearly 33 percent. Concentrated orange juice was the most popular sales item for our number one supplier, Brazil.
- Beef imports, which dropped 16 percent to $1.2 billion. About 42 of every 100 pounds of imported beef came from Australia.
- Cocoa and cocoa products valued at $1.1 billion, up 28 percent. Brazil was the leading seller, followed by the Ivory Coast.
- Sugar, with an import value of $1.1 billion, up $171 million. The Dominican Republic was our biggest source.
- Wine imports valued at $932 million, up 9 percent. Italy, by far, was our leading foreign wine merchant.
- Oilseed and products, valued at $796 million, a jump of 52 percent. Coconut oil accounted for more than 42 percent of imported vegetable oil, and most of that came from the Philippines.
- Pork, with an import value of $703 million, up 10 percent. Canada, our number one supplier, set a record for shipments to the United States.
- Banana imports worth $666 million, up 14 percent. Costa Rica replaced Honduras as America's top banana supplier.

Around 60 percent of U.S. farm product imports in 1984 came from the developing countries, led by Brazil, Mexico, Indonesia, Colombia, and the Philippines.

Patz issues safety warning on older silo unloaders

POUND, WI — Patz is offering credits or safety retrofits to all purchasers of their models 61, 66 and 98 silo unloaders.

The offer is in response to reports of serious injuries or deaths resulting from operation of Patz equipment while workers are inside the silo.

"State-of-the-art guarding at the time of manufacture may not fully cover the area of the gathering chain," the company says in its press release.

Even though the company stresses that the unloaders should not be operated while anyone is inside the silo, it is making the following offer to current owners of the equipment, which was manufactured from 1960 to 1971.

For unloaders already converted to larger 30-inch drive wheels, Patz will provide improved guarding for the gathering chain, at no cost to the user.

For those owners who have not made the conversion, Patz will either provide the improved guarding after the equipment has been converted to the larger wheels, or offer the owner a $400 rebate on the purchase of a new Patz unloader.

The company urges all owners of affected equipment to contact their Patz dealer or the company.

U.S.-Soviet Grain Trade at record level

WASHINGTON — Secretary of Agriculture John R. Block said the recent sale of 193,000 metric tons of U.S. grain to the Soviet Union has pushed Soviet purchases during the current year of the Long-Term Grain Agreement (LTA) to an all-time high of 15.628 million tons.

He said total sales, with almost eight months still remaining in the October-September agreement year, have already surpassed the previous record of 15.5 million tons in 1978/79.

"I am pleased that our efforts in boosting the level of U.S.-Soviet grain trade have resulted in this record amount so early," said Block. "President Reagan's policy against farm embargoes and the increased levels provided for in the new agreement allow the Soviets to plan with confidence to expand their livestock industry and to fill more of their import needs with U.S. grain."

Planting control for early emergence

International® Early Riser 800 Series Cyclo® Air Planter

Revolutionary IH Cyclo Air planters combine unmatched seed environment control with the metering accuracy and speed of air placement Result earlier rising crops and more uniform emergence

- Precision seed metering, depth control, seed placement and covering
- Crop changes in 10 minutes or less, without tools
- Big 15-bushel seed hopper lets you plant longer
- Drums for wide range of seed varieties
- Plants up to 8 MPH, depending on population

Trailing or mounted models 4 to 12 rows

Pa. grain stocks up 80%

HARRISBURG – Pennsylvania's corn, oats wheat and barley stocks on Jan. 1 totaled 129.5 million bushels, up 80 percent from a year ago, according to the Pennsylvania Crop and Livestock Reporting Service.

Stocks on farms, at 114.7 million bushels, were up 87 percent from a year earlier, and off-farm stocks, at 14.8 million bushels, were up 37 percent.

Corn stored in all positions totaled a record high 111.5 million bushels, double last year's level of 55.7 million bushels. Oats held in all positions amounted to 10.9 million bushels, up 12 percent from the 9.76 million bushels on hand a year earlier. Wheat stocks in all positions totaled 5.69 million bushels, up 11 percent from last year's level of 5.11 million bushels.

Barley in all storage positions, at 1.48 million bushels, was down fractionally from a year earlier. On-farm soybean stocks totaled a record high 3.09 million bushels, more than two and a half times larger than last year's on-farm stocks of 1.18 million bushels.

On Jan. 1, Pennsylvania had 325 off-farm storage facilities (mills, elevators, warehouses, terminals and processors) with a total grain storage capacity of 32.2 million bushels.

National corn stocks in all positions on Jan 1 totaled 5.81 billion bushels, 18 percent more than last year's level of 4.91 billion bushels. Oats in all positions totaled 357 million bushels, down six percent from a year ago. Barley stored in all positions totaled 438 million bushels, up 19 percent from last year's 368 million bushels.

Wheat stocks in all positions totaled 2.14 billion bushels, eight percent less than last year's 2.33 billion bushels. Soybean stocks in all positions, at 1.42 billion bushels, were up 10 percent from a year ago. Sorghum stocks in all positions totaled 729 million bushels, 11 percent more than a year ago.

The total number of off-farm storage facilities in the U.S. on Jan. 1 was 13,936, with a total grain storage capacity of 8.1 billion bushels.

Blue Ball farm seminar

BLUE BALL – Farm income, record keeping, production and pollution were among the subjects at the Second Annual Agricultural Farm Seminar held here recently.

Sponsored by the Blue Ball National Bank for its farm customers, the seminar reached 180 Lancaster, Berks and Chester County farmers. Morgantown Branch Manager W. Richard Good summed up the purpose by saying, "We want to help our customers make higher earnings and be better managers so that they can be better prepared when applying for loans."

Robert Anderson, a vocational agriculture instructor in the Eastern Lancaster County School District, gave some ideas for and vegetables to marketable manure. Fellow ELANCO teacher Don Robinson followed with "Keeping Accurate Records and Preparing for Your Accountant".

Before lunch, Lancaster County Extension Agent Glenn Shirk provided tips on dairy herd management. The afternoon was all Penn State as the university's Extension Meat Specialist, William Henning, discussed a more profitable beef and swine operation. Virgil Crowley, Penn State Farm Management Extension Coordinator concluded the day with the "Agriculture Outlook for 1985" including background on the potential impact of pollution on Chester and Lancaster Counties.

Blue Ball National Bank President Allen Musser opened the session with a promise "This meeting today will enable all of us to receive new ideas, as well as help each one of us to gain additional knowledge and understand the farm industry better."

Kenneth Overly, seminar organizer and master of ceremonies, noted that the subjects presented this year were requested by the farmers who attended last year's event. He already is making plans for the third annual seminar

Churchtown farmer Martin Shirk echoed the sentiments of the majority when he pronounced everything worthwhile and added, "You're never too old to learn." Tablemate Clarence Good, East Earl, added, "and the food was good too!"

Soybean group sets meeting

DOVER,Del. – The first annual meeting independently sponsored by the Mid-Atlantic Soybean Association will be held March 18, at the Sheraton Inn in Dover.

The program will include commercial exhibits, a social reception, a spouses program and an awards banquet.

To take part in the meeting and program, interested growers and agribusiness representatives from the four member states -- Delaware, Maryland, New Jersey and Pennsylvania – are invited to contact Jerry Kennedy, Soybean Association regional manager, at 301/742-9500 or P.O. Box 319, Salisbury, MD 21801.

Survival tactics in '80s farming

NEWARK, De. — Just one year after a much discussed Payment-In-Kind (PIK) Program, we find ourselves still in a chronic, if not acute, surplus position with respect to most of our major commodities.

According to Outlook information the situation is not likely to get better until at least the end of the decade. How then can we manage our affairs in order to survive on the land until times do get better?

The first task a farmer must face is to determine his or her cost of production. Clearly one must have a place to start an analysis of alternatives and an accurate cost of production for the individual farm and individual crop is that starting place.

The county extension office will have standardized costs for most major commodities that will provide a basis to work from. After obtaining these figures adjust them to reflect your actual situation remembering to note differences in land cost for rented vs owned land and financed assets vs those that are free and clear of debt.

Once the true cost of production is known for a given crop, the next step is to apply the alternative yields you might expect to get and calculate your target price. This may well result in a higher target than one can realistically expect in the near future.

Here are some of the tactics we might employ to achieve a positive cash flow or at least a survival cash flow level:

• Analyze your variable costs. Are you buying quality seeds and transplants at a reasonable price? Is your insecticide program a preventive one that might be cut back in favor of a "scouting-rescue" form of insect control? Remember to fertilize for a realistic yield goal. Is your herbicide program the most cost effective one recommended for your particular weed problems and soil types?

• Do you have access to a source of manure? Have the contents analyzed and use it to replace commercial fertilizer.

• Had you planned to buy a new tractor this year? Don't unless it is absolutely necessary. A lot of maintenance can be bought for the yearly payments on a new piece of equipment. If new equipment is absolutely necessary, consider leasing.

• Are your rental rates too high? Try to re-negotiate your rental agreements to either a lower rate, a flexible cash lease, or a share lease to spread some of your risks between you and your landlord. If all fails, give up the rented land — better farm "smarter" than "bigger."

• How far do you travel to your most distant piece of land? Rented land that is far away may need a closer look for profit potential.

• Don't rent new land if the move necessitates the purchase of additional capital items or the commitment to additional full-time labor.

• Are there idle buildings on your place that might house a supplemental animal enterprise?

• How much of your cost is made up of interest payments? Do you have any opportunity to refinance over a longer period to lower your interest and principal commitments?

• Are your soils prone to wide fluctuations in yields? Perhaps crop insurance should be considered to protect against downside production risk. Irrigation can also reduce yield fluctuations.

• What is your crop mix? Are there markets for alternative crops in your area that might produce a more stable cash flow?

• Do a more conscientious job of marketing. If you see a chance to lock in a profit — do so. Don't hold back in hopes of a higher price; take a profit when you find one in the near term.

• If the market conditions do not appear favorable, take advantage of an ASCS program to guarantee a minimum price for your commodity.

• Do you or some member of your family have a skill that might be marketed to supplement the family income?

• How many families are you trying to support on the family farm? One family may be able to survive where two may not.

• If costs can't be restructured to ease cash flow problems, partial liquidation may be necessary. It may be better to reduce the size of your operation now and remain in farming than to try to hold on and lose everything in a couple of years.

Remember we are discussing survival tactics here; this fact sheet is not intended to replace any recommendations under normal conditions. If after some preliminary analysis, you feel that one or more of these areas may hold some promise for you, please feel free to contact your County Extension Office. The extension team stands ready to assist your analysis in production, marketing, or financial matters on an individual and confidential basis.

Pa. potato stocks up 39%

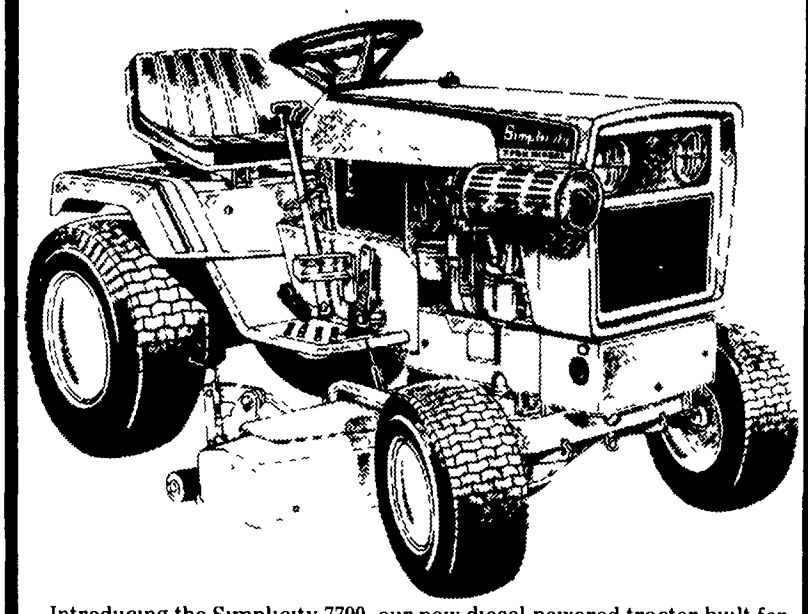
HARRISBURG — Total stocks of potatoes stored in Pennsylvania on February 1, 1985 were 2,370,000 hundredweight (cwt.), 39 percent more than a year ago according to the Pennsylvania Crop and Livestock Reporting Service. Of this amount, 890,000 cwt.–38 percent of the total–was stored in processors' facilities.

Stocks are defined as the quantity remaining in storage for all purposes and uses, including seed, shrinkage and waste and other losses that occur after the date of each report. Stocks may also include potatoes produced in other states. Sales of fall potatoes for all purposes generally account for about 90 percent of the total fall production. Shrinkage and loss and home use account for the remaining ten percent.

February 1, 1985 potato stocks totaled an estimated 143 million cwt., for the 15 states in the stocks program. This is up three percent from a year ago, but five percent short of the February 1983 stocks. The storage total accounted for 47 percent of the fall potato production compared with 49 percent a year ago. By variety, potatoes in storage are 75 percent russets, 22 percent whites and three percent reds based on data from the 11 objective yield states.

Simplicity®

NEW DIESEL INTRODUCTORY SALE



Introducing the Simplicity 7790, our new diesel-powered tractor built for the long haul, and, for a limited time

This rugged tractor has a 790cc (18.5 HP) twin-cylinder Briggs & Stratton Lombardini air-cooled diesel engine to ensure long lasting performance and low maintenance. Its perfectly matched clutchless hydrostatic transmission guarantees a smooth ride, at speeds up to 7 mph. And, our famous axle-mounted, pivoting 48" mower rides up and down at the rear on full width rollers, giving a smooth, even cut

Other standard features include a fingertip-controlled hydraulic attachment lift, a heavy-duty 12-volt battery, and more.

Test drive the Simplicity 7790.

USDA Survey wants farmers to tell it like it is

WASHINGTON – "We're not sales people," claims one USDA analyst. "All we can do is tell farmers why the information is needed and what it's used for. We count on their cooperation based on a recognition that it's in their own interest."

He could be talking about many surveys, but he isn't. Instead, he's referring to a major one, now in the final planning stages, that will ask farmers about their 1984 farm production expenses, debts and assets, income, production practices, and costs of production for selected commodities.

The notification letters will go out in mid-January to 24,000 farmers and ranchers across the nation. This large random sample represents a cross section of American agriculture. In the 6 or 7 weeks that follow, someone will be knocking on their doors, requesting an hour of the farmer's time.

According to those involved, the survey results that emerge will help farm analysts, lawmakers, producer groups, and the farm input industries understand the needs and problems within the farm sector, and how those needs and problems vary from one type of farm and one region to another.

The project is called the 1984 Farm Costs and Returns Survey. It's part of the work of USDA's Economic Research Service (ERS) and Statistical Reporting Service (SRS). Put in the simplest terms, SRS compiles the statistics, and ERS economists analyze their meaning. Both agencies report their findings to Congress, farmers, and the general public.

Both agencies are also hoping for a good response rate from farmers. The greater the response, the better the results. And once a sample of producers is selected, new farms cannot be added or substituted in place of refusals. That would destroy the statistical validity of any survey.

Refusals are a concern partly because financial information falls into a very sensitive category. A common reaction is, "It's none of your business."

Get The Story Out

"They're right, of course," says SRS statisician Fred Thorp, who is responsible for publishing survey results. "Financial information on individual operations is none of our business. But we're not interested in getting the answers just to be nosy. We're trying to put together a collective picture of what's happening in the farm sector."

ERS economist Jim Johnson contends that farmers should view the survey as an opportunity to tell it the way it is. Even the farms that show large profits typically face huge debts and expenses.

"This is one of the best ways to get your story out," Johnson advises. He heads a group that spends its time analyzing the vital economic statistics of the farm sector, interpreting their meaning, and relating them to conditions in farming. Others in and out of government rely on this information in assessing the health of the agricultural economy and responding to its needs for capital production inputs and farm legislation.

Johnson's point is simple: The vital statistics provide an essential body of knowledge.

"Try to get beyond the generalities and describe conditions in the farm sector without citing figures on farm income, farm debts and assets, costs of production, rising input and interest expenses, parity prices, or returns for individual crop and livestock commodities. You can't do it," he insists. The bottom line, he adds, is that "all these vital economic statistics depend on data from this survey."

Thorp of SRS is optimistic that farmers are generally in the mood to cooperate. "Our people have been getting a pretty good reception in the last few years. Wheat farmers in Oklahoma know that their costs of production are above their returns, and they want Congress and the voting public to know. They say, 'I'm losing money. Come on in and let me demonstrate it.'"

One of his key selling points is a guarantee of confidentially. "The questionnaires are not passed on to the IRS, local tax assessors, or anyone else," he says. "Several of our state offices have a furnace, and they burn the questionnaires. Other states shred them, but they're all destroyed as soon as the survey is over and the results, without individual names or addresses, are in the computer."

May Take An Hour

Two other concerns are related by Robert Tortora, who is chief of the data collection branch in SRS' main office in Washington. This survey is long, he says, and the interview may take an hour or more. That compares with 15 minutes or so for most SRS surveys. Also, he notes that large producers tend to get selected repeatedly in survey samples because relatively few large producers account for a major share of farm production.

"We're trying to do everything we can to minimize the burden on respondents," he says. "For every 10 questions we ask, we've eliminated about two others that were proposed." Earlier screenings eliminated more questions. "Also, we're trying to get some of the special need items on a rotational basis, so we don't have to ask them every year."

The ***1984 Farm Costs and Returns Survey*** is lengthy partly because it represents a combination of what had formerly been two separate surveys each year—one on farm production expenditures, the other on costs of production. It also includes some debt, asset, and interest expense questions that were once obtained through a third survey on farm finances.

However, the combination does not mean that farmers face three extensive sets of questions. The majority of farmers in the sample are scheduled for the main questionnaire, which focuses on "whole farm" information. Other selected groups are scheduled for separate costs of production surveys on individual commodities, such as rice and sugar beets.

This approach offers some significant advantages. It eliminates the possibility of the same farm being chosen to report both total farm expenditures and selected cost of production information. It also allows survey analysts, for the first time ever, to meld together cost of production information for individual "enterprises" (hogs, corn, soybeans, etc.) with "whole farm" financial data.

The advantages stem from the single, larger survey sample as well as from some key "whole farm" questions that everyone will be asked, thus tying the separate questionnaires together. That makes the value of the new survey greater than the sum of its parts, says ERS' Jim Johnson.

As a result, the data can be broken down a lot further than in the past without losing statistical validity. The ability to further break down or "disaggregate" survey data is a major step forward, according to Johnson, who was one of the prime movers behind the new survey format.

Not one big farm

He explains the importance of going after information that plumbs beneath the national averages: "Most past estimates of farm income and farm debts and assets have been published only in total or broken down by sales class. That provides a very limited perspective on how incomes, debts, and assets may be changing on farms that produce different commodities or use different inputs. In essence, we've been treating agriculture as though it were one large farm because we didn't have the data to treat it differently."

There was a time, he says, when the aggregate treatment wasn't terribly misleading because farms were very much alike throughout the country. But not today. If you lump together the financial profile of dairy farms and hog farms, for example, the "average" figures you get aren't representative of either dairy or hog farms. It's just as misleading to lump together large specialized feeder pig operations in the Midwest with small, part-time hog-corn farms in Appalachia.

Goes Deeper

"This survey is designed to go deeper than the national averages that are too generalized to tell us who's hurting, who's in a cost squeeze, who's facing liquidity problems by farm sales class, type of farm, location, and ownership," Johnson says.

"The new, expanded survey will provide data which can be used to develop a more disaggregated perspective. Because of the heterogeneous nature of today's farm sector, aggregate data are difficult to use in assessing how changes in input or output levels, price levels, technology, or policy changes may affect different types of farms."

Another advantage, he points out, relates to the rapid changes in the economic environment in the last few years. Analysts have been handicapped by having to project from data that is sometimes, two, three and even four years old.

"Instead of relying on dated information, we'll be able to answer questions with very recent data. That will help us, farmers, the public, and those who make farm policy."

The payoff of all this, Johnson says, is a broader and more timely perspective on how changes in economic or technological factors affect the well-being of different types and sizes of farms.

Getting the information requires a lot of detailed questions, but Thorp promises that the SRS state offices managing the survey will do everything possible to make it easy for farmers. The interviewers are trained especially for this survey, and they'll schedule the interviews at times convenient for the farmer. The only suggestion he has for the farmer is to try to have farm records handy. "If they're prepared, it can save a significant amount of time."

Here are some key points the USDA statisticians say they want participants to know about this survey:

- **It's soon.** Interviewers will visit farmers between Jan. 21 and March 8, 1985. The interviewers live and work in local survey areas. They were hired and trained to conduct the survey by USDA specialists.
- **It's voluntary.** You are not required to participate. Remember, though, that your farm was selected by a statistical sampling procedure, and no one else can take your place. Each participant represents many other farmers with similar operations.
- **It's confidential.** After questionnaire data (without names) are fed into a computer, the questionnaires are destroyed so there is no record of any individual's answers. Questionnaires are not sent on to USDA in Washington or shared with any other government agency.
- **It's convenient.** Interviewers will come to your home and can schedule or reschedule surveys at

Where to look for soil insects in corn

Farmers who intend to plant corn this year may be wondering if a soil insecticide is necessary on all of their acreage. Many factors influence soil insect populations and their ability to damage corn, says University of Delaware extension pest management specialist Joanne Whalen, but cropping sequence and recent field history are two of the most important considerations.

Since cropping patterns, tillage practices and pest histories vary among fields, treatment decisions should be made on a field-by-field basis, Whalen says. She offers the following guidelines for assessing potential insect problems and deciding when to treat.

If corn is planted into soybean stubble, growers can expect very few soil insect problems. Occasionally, white grubs attack corn planted into conventional or double-cropped soybean stubble. Sampling for this pest can be done two to three weeks before planting. "Ideally, soil temperature should be about 50 degrees F and soil samples should be taken in five to ten areas of a field," the specialist says. "We recommend using a soil insecticide if you find 0.5 or more grubs per squre foot of soil."

Seed corn maggots are another possible pest. However, a planter box seed treatment will provide inexpensive and effective control for this insect.

Currently, Whalen says there is little potential for soil insect problems in continuous corn, though this situation may change since Western corn rootworm beetles were found in Delaware for the first time last year. Rootworms can cause severe damage if corn is grown year after year in the same field. Scouting for rootworm beetles should begin in mid-July and continue through mid-August. The presence of beetles then is an excellent indicator of problems the following season.

The potential for slug damage in continuous no-till corn will depend on the weather at planting. Surveys conducted in Delaware indicate that the greatest damage occurs during cool, wet springs and in fields with a heavy cornstalk mulch. Since slug outbreaks are spotty, the best control measures are spot treating with an insecticide, or tilling to help dry out the soil.

Established pastures, sod or legumes provide favorable sites for the buildup of white grubs and wireworms. Since no effective rescue treatments are available for these insects, Whalen advises using a soil insecticide in such fields at planting. These fields also will be attractive to black cutworm adults. Economic outbreaks of black cutworm occur in less than 5 percent of Delaware's cornfields, so a rescue treatment provides the most effective and economical control against this pest.

Guide on greenhouse pests Published

MEDIA – Greenhouse operators now have the advantage of Penn State research with the university's first Agricultural Extension guide for commercial greenhouses, says Jeff Jabco, Delaware co. Extension Agricultural Agent. The publication, "Pest Management and Growth Regulation in Greenhouse Floriculture 1985", was compiled by Extension specialists in Penn State's department of entomology, horticulture and plant pathology.

It summarizes recommended management practices for insects, plant diseases and weeds, and suggests types of plant-growth regulators for greenhouse floriculture crops. Reference materials on soil disinfestation, pesticide compatibility and other topics are available in the guide.

According to the guide, "successful greenhouse pest management is dependent on adherence to..a strict reliance on sanitation, the frequent inspection of all plants to detect pest problems before they reach damaging levels, prompt employment of control measures when needed, and use of pest-tolerant plant varieties when available."

The success of growth regulators depends on "methods of application, temperature, light, pH of soil and growth regulator, moisture concentration, wetability, time of the year, root medium, and stage of plant development."

Greenhouse operators and anyone else interested in the publication can send $3 to the Pennsylvania State University, College of Agriculture Extension Service, University Park, Pa. 16802 or to the Delaware County Cooperative Extension Office, Rose Tree Park, 1521 N. Providence Road, Media, Pa. 19063. Penn State is an affirmative action, equal opportunity university.

March 1

Deadline still in force

WASHINGTON – The U.S. Department of Agriculture will not extend the 1985 acreage reduction programs' signup deadline past the originally scheduled March 1 date, said Everett Rank, Administrator of USDA's Agricultural Stabilization and Conservation Service.

Requests to extend the signup period are being received from several areas where some farmers have not been able to arrange financing for 1985-crop plantings.

Rank said that USDA encourages such owners and operators to sign up for the program while they work out their financing. If lack of financing is the reason for not seeding the 1985 crop, USDA will terminate those contracts by mutual agreement and without penalty.

The 1985 acreage reduction programs are for wheat, feed grains, rice, upland cotton and extra long staple cotton.

USDA Survey

(Continued from Page C 6)

a time convenient to you. You may need to refer to your farm records for some of the information, so it would help to have records handy for the survey.

• **Its important.** Policymakers, farm groups, and the public must be kept informed of how changing regulations, input costs, returns, and technology affect the agricultural economy.

• **It's really the only way.** A survey of a carefully selected sample of farmers is the most accurate and economical way to obtain this information. Mathematical models and computer simulations are important tools for farm analysts, but even they depend on a "real world" data base—in other words, information from farmers themselves.

If you want, your state office will gladly send you a summary of the survey results. Just ask the person who conducts the interview. Results will also be reflected in USDA's estimates of farm income, farm sector debts and assets, costs of production, parity ratios, and other vital economic statistics that are published in farm magazines and newspapers and USDA reports

1500-gal. Tank Will Load in Approx. 1½ Min.

Check These Outstanding Features on the SLURRY BUGGY

A liquid manure spreader that loads and unloads and has no chains, bearings, fans, augers, or moving parts that touch manure.

- Tanks are made of 5/16 thick metal
- Large air-cooled vacuum pump
- Pump has not only a primary trap, but also a large secondary moisture trap
- Pump has an air precleaner
- A 6-inch hydraulic operated brass valve for unloading
- Has 3 different manure spreading patterns
- Tank has a float level indicator and signt glass
- A 20-inch rear manhole for easy access to tank
- Priced at $5,625

Optional Features:
Heavy Duty tool bar with tooth spring loaded injection
6-inch side valve large flotation tires

Farmers... rebuild your tanker with one of our new pumps (192 cfm @ 10 HG)
$1,275

We have 6" and 8" Tapered brass valves for your Liquid Manure Handling Needs.

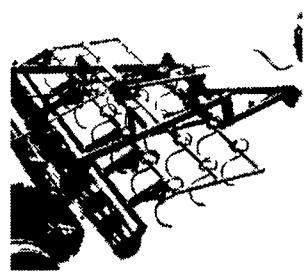
With The New Culti-Planter Attachment Designed For Cornplanters & Grain Drills

(Wacks Out Tracks)

Accomplish seedbed preparation in the same pass as planting

Culti-Planter mounts to the front of your grain drill planter. It becomes an integral part of the implement so you can finish the seedbed and plant seed on the same trip through the field

The Culti-Planter is a unique combination of shanks and the aggressive roller from Unverferth Rolling Harrow



A single cylinder operates both the cultivator and the grain drill. Depth of cultivator and drill can be set independently

Place Your Order NOW For Spring Delivery

Don't Wait!

Culti-Planter prepares a seedbed, removes tractor tracks and leaves a smooth field for more uniform crops

SPECIAL OFFER

On A New
1690 MFD TRACTOR
90 HP
22 Month Warranty
Serial #11213331

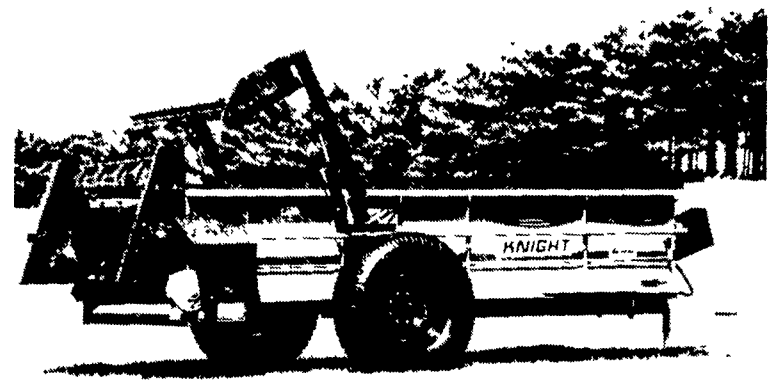
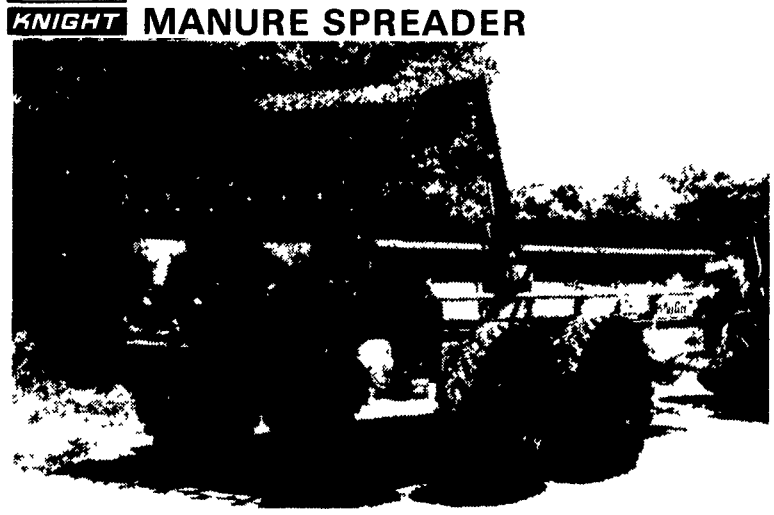
Your Next Spreader Should Be A KNIGHT Because They Put The Quality Where You Need It!

Come And See For Yourself At
BINKLEY & HURST BROS., INC.
Your Dealer Who Stocks Your Needs

KNIGHT **252 MANURE SPREADER**



KNIGHT **"350" MANURE SPREADER**



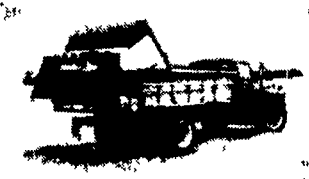
KNIGHT **"410" MANURE SPREADER**

Dairymen and cattlemen alike have found the increased capacity and the maneuverability of the #410 spreader advantageous to their operations

The #410 offers the low profile of the model #350 yet carries a larger load — 20¾ longer and 2 deeper. 4 x 6 hardwood top rails are standard. Available with 8 bolt 20 tandem wheels or the #410 may also be truck mounted

The box construction is heavy duty all steel with 10 ga bottom and 11 ga sides welded as one unit. Heavy auger style beaters with alloy steel ripper teeth shred frozen manure for easy spreading. Hydro fluid endgate seals sloppy manure. Auger type top beaters spread that extra high load

You can expect top performance and you'll get it from the Knight #410 manure spreader



The model #410 may be truck mounted for those operations that need a self propelled unit (Model #350 shown)

You can depend on a Knight
Since 1945

***REMEMBER...*We Stock All Sizes.**

Strong Tractors From A Strong Company
Featuring the most advanced tractor electronic instrumentation in the industry.

New Comfort, New Cabs, New Seating, New Controls AND MORE!!!

COME AND SEE THE "94" SERIES TRACTORS FROM CASE, THE TRACTOR SPECIALIST

A touch of genius

The most advanced electronic instrumentation in the industry is standard on all new Case 2094 2294 2394 2594 and 3294 tractors

At a glance you can see engine RPM ground speed PTO speed electric tach/hourmeter, total area worked area worked rate per hour timer with stop/start control and % of wheel 'ip (optional) digitals

A separate warning light (red) and audible signal system monitors the critical functions of engine oil pressure engine coolant level transmission oil pressure and temperature and an alternator warning light

A second warning light (yellow) and audible signal system monitors air filter and transmission filter functions Turn signals are indicated in green

Digital instrumentation also converts fuel level engine coolant temperature exhaust temperature gauge and voltage indicator (on turbo models) to bar graph displays with audible warnings at critical levels

Weatherproof and sealed against dust and condensation new Case electronic instrumentation also provides for metric English conversion memory during downtime true engine hour monitoring and diagnostic functions

The "intelligence" of Case state of the art electronic instrumentation can help you be more productive more fuel efficient and more relaxed every hour in the field One of its most exciting features is the Case true ground speed sensor

A true monitor

With this new sensor you can instantly determine your true ground speed or your actual % of wheel slip at the touch of a finger You can weigh your tractor correctly select transmission speed more accurately You ll realize better fuel economy and maximize field performance with the new Case true ground speed sensor

Especially when the weather doesn't cooperate. That's when the season seems shorter, you get busier and equipment downtime costs more

But when you take advantage of our Green Light Service, especially the off-season specials like the one we're having right now, you can roll into the field and not worry so much about unexpected downtime. Because we will have inspected for the unexpected. And troubleshooting in the shop is a whole lot more affordable than finding trouble in the field Especially when you're busy

So call us today and check out our Green Light Service Specials Then you won't have to worry about it later when things get busy

Shift on the Go!

Yanmar brings big tractor features down to size with Powershift and Live PTO in compact tractors
Powershift means clutchless on-the-go shifting to keep you going where others bog down
2-Speed 'Live' PTO keeps implements working at full power even when tractor is stopped
Plus more standard features and Yanmar's dependable 3-cylinder diesel engine

You Can Use a Yanmar!

YANMAR TRACTOR (U.S.A.), INC.

MARTIN HARDWARE & EQUIPMENT CO. INC.

OPEN Mon. Fri. 8-8 Wed. 8-12, Sat. 8-5

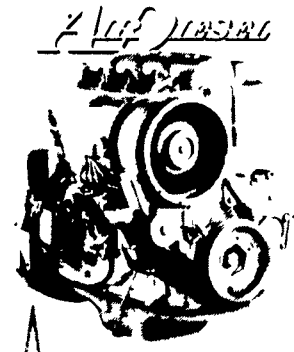
Looking for lower operating costs and less downtime? You'll want our name and numbers.

20% better fuel economy
Deutz AirDiesels are more fuel-efficient by design. Advanced combustion technology, direct fuel injection and fast warm-up allow Deutz engines to do more work with less fuel.

40% less downtime.
AirDiesels have no liquid-cooling system. That means 40% better reliability. No water pump failure, no leaky radiator, no liquid in the engine oil. Ever.

150,000 AirDiesels at work.
We've got a complete selection of engines from 8 to 500 hp. Powering welders, compressors, pumps, gensets and more. Whatever the application, whatever the environment, there's a Deutz AirDiesel to do the job for you. They are premium quality engines that deliver low life cycle cost.

Call us today for more information. Put our numbers to work on your bottom line.



We've got the numbers.

KHD DEUTZ

We have been distributing Deutz Diesels since 1955.

★ **WE NOW ALSO SERVE WESTERN PA. AREA**
We Seek New Dealers and OEM Customers.

With Each Deutz Engine We Also Deliver:

★ **EXPERIENCE** - Accumulated the hard way, our customers problems are our problems.
Our experienced personnel design each sale for customer satisfaction and trouble-free service.
★ **RELIABLE SERVICE** by conscientious technicians.
★ **SERVICE DEALER NETWORK.**
★ **HIGH VOLUME** - lowest Deutz prices.

No other independent engine house in the region can match our expertise.

Shouldn't you be our customer or dealer? It would be good for both of us!

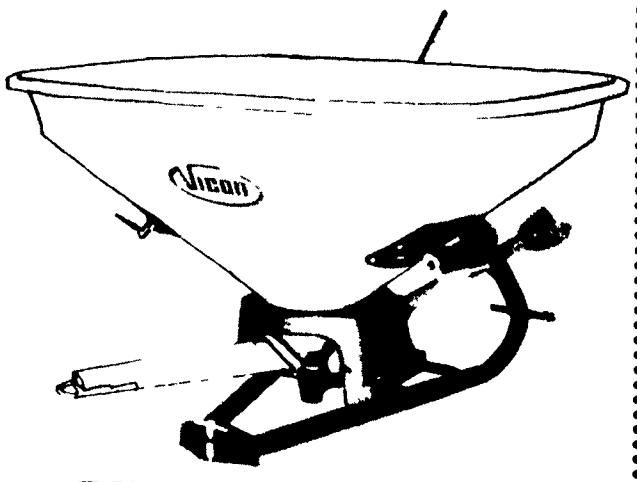
Vicon **Winter Special On SEEDER/SPREADERS** Vicon

the New Dimension in seeding/spreading

Over the past two decades Vicon pendulum action seeders/spreaders have become an integral part of the farming scene Now Vicon Varispreaders are entering a New Dimension a completely new range of spreaders featuring a characteristic new design, and incorporating the latest technology to give the accuracy and reliability demanded by todays profit conscious farmer Pendulum action gives the advantage of accuracy on sloping ground as well as on the flat, coupled with the ability to spread all types of solid fertilizer, chemicals, seeds, powders and lime
The six models in the new range offer capacities to suit the needs of every farm size A special feature of the New Dimension spreaders is an easily adjustable flywheel which changes the effective spreading widths from 20-45 feet



a sound investment for profitability

RED WING FARMS
RD 1378
FLEETWOOD
PA
215-944-0402

IT'S ALWAYS ON THE LEVEL.
Vicon's new Automatic Stabilizing (AS) spray booms make the ups and downs of chemical application a lot easier to take. The AS linkage system lets you set for flat land or hillside spraying and maintain a level, accurate spray pattern across the width of the boom. For more information, see your Vicon dealer at:

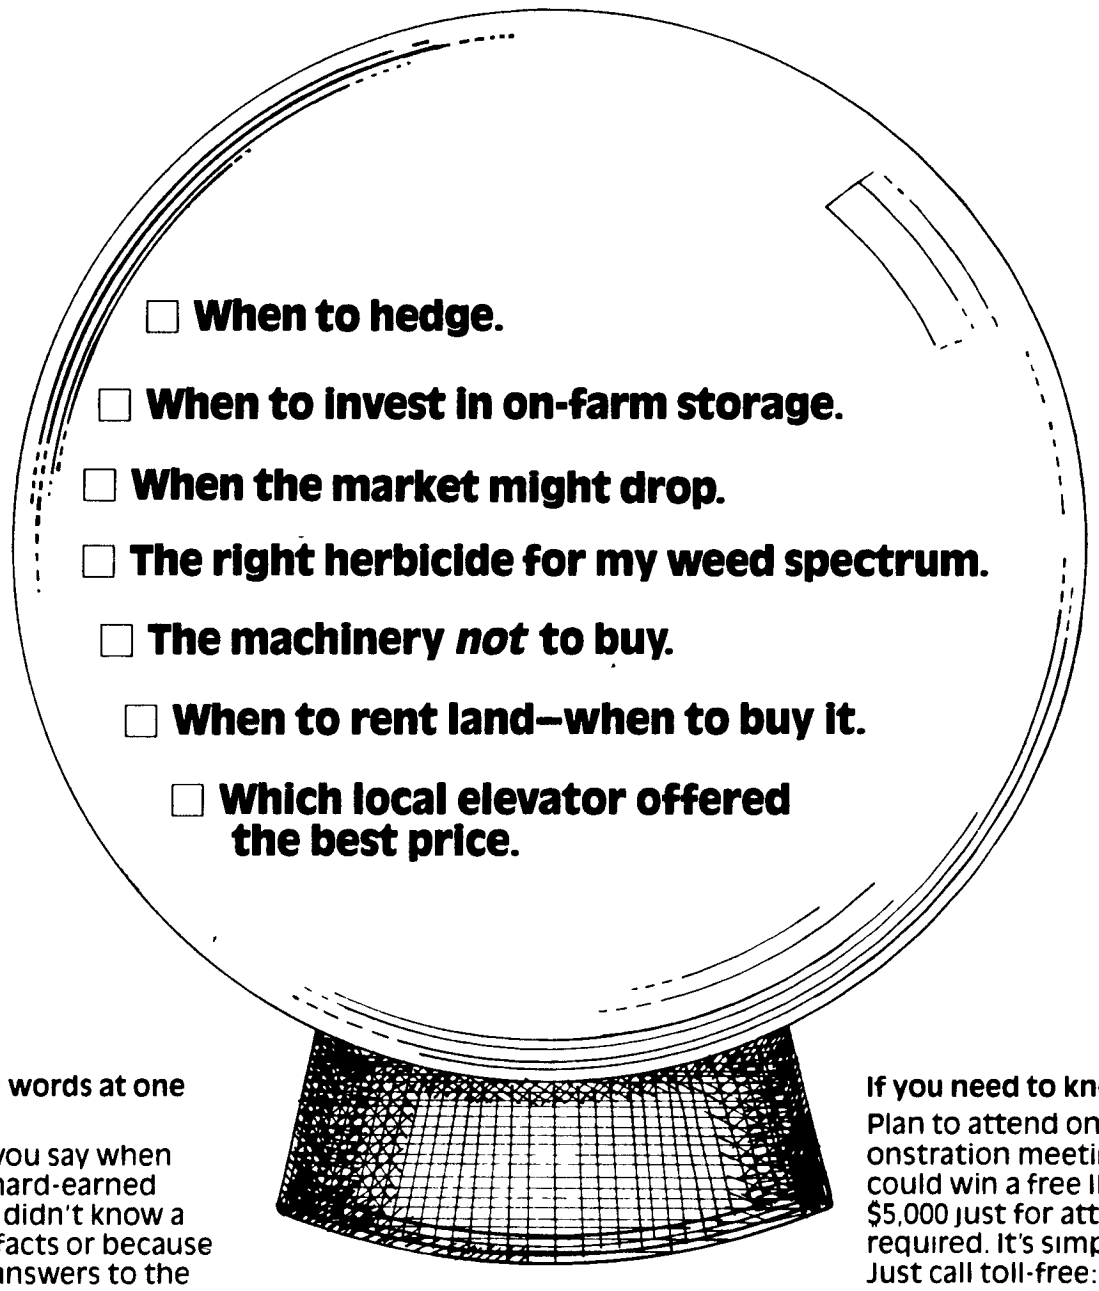
"If only I had known..."



☐ When to hedge.
☐ When to invest in on-farm storage.
☐ When the market might drop.
☐ The right herbicide for my weed spectrum.
☐ The machinery *not* to buy.
☐ When to rent land–when to buy it.
☐ Which local elevator offered the best price.

We've all had to say those words at one time or another.

Those are also the words you say when you've lost some of your hard-earned income–just because you didn't know a few small, but significant facts or because you didn't have the right answers to the questions every good farmer needs to know *before* he makes a decision.

Now, Grassroots,* America's most comprehensive agricultural video-tex information service, is available to help farmers get the right answers to their questions–at the right time.

Smart farmers know that accurate, timely agricultural information can spell the difference between profit and loss. Now that Grassroots is available there's no excuse for not knowing exactly what you need to know to manage your farm more productively, more cost effectively–with less effort.

If you need to know more–

Plan to attend one of the Grassroots demonstration meetings scheduled below. You could win a free IBM-XT computer worth $5,000 just for attending. *No* purchase required. It's simple to make a reservation. Just call toll-free: outside of Maryland **1-800-638-3860**, in Maryland **1-800-492-2886**.

Grassroots makes a smart farmer even smarter.

GRASSROOTS

All the information you need to grow.

NFO protests Canadian hog exports

CORNING, Iowa – Members of the National Farmers Organization are asking Congress to take action to stem the flood of Canadian hogs and fresh and frozen pork that are breaking the hog market and costing U.S. producers as much as $1 billion a year.

"A glut of Canadian hogs in a couple of packing plants on a particular day will break the market in that area," President DeVon Woodland said. "This has built up to the point where these imports are seriously damaging our price here in the United States."

Woodland said thousands of letters and telegrams protesting the level of Canadian imports are being sent to members of both houses of Congress. He said the campaign is being coordinated through more than 200 NFO livestock collection points across the country.

This action was authorized Feb. 8, by NFO's board of directors, which reviewed figures estimating Canadian live hogs and fresh and frozen pork coming in this year will be equivalent to 4,123,178 hogs. That would be 4.9 percent of the estimated 1985 commercial slaughter.

U.S. Department of Agriculture figures show the number of live hogs imported increased from 294,933 in 1982 to 1,332,015 in 1984; fresh pork from 91,165 metric tons to 124,066 metric tons, and frozen pork from 30,909 metric tons to 32,425 metric tons. It is estimated that this will increase in 1985 to 126,000 metric tons of fresh pork, 32,500 metric tons of frozen pork, and 2,033,718 live hogs.

Woodland said it is estimated that these imports will cost U.S. hog producers about $5 a hundred this year. Taking $12 less for each hog marketed in 1985, he said, means a loss to producers of more than $1 billion. Most of the Canadian hogs are being killed or processed in northern plants in an area stretching from South Dakota to Pennsylvania.

The NFO president said the number of Canadian hogs in some packing plants may run as high some days as 60 to 75 percent of the kill. "That glut of hogs on a particular day will overload the market in that area," he explained. "We have seen it where a packing plant killing 75 or 80 percent of its kill on a given day will absolutely break the market in that area."

He said a related problem is that packers are buying lighter hogs in the 210-215 pound range from Canada and raising their weight breaks to U.S. producers. "We have advised producers to keep their product sold off, to sell at proper weight ranges to avoid being docked, and to avoid adding extra tonnage to the market," Woodland said. "Now we have to raise our hogs heavier to make room for light hogs coming in from Canada."

Woodland reported that nearly half the live hogs are expected to come across the border at Pembina, N.D., this year and go directly by truck to packing plants in Minnesota, Iowa, and the Dakotas. Although the number of hogs coming across at Pembina may not look like much in terms of total U.S. slaughter, he said, it represents as much as 8 percent of the kill in the states involved and cheapens hog prices throughout the Midwest.

NY Cattlemen approve beef marketing order

CORTLAND, N.Y. – The New York Beef Cattlemen's Association has approved a Beef Marketing Order for New York State and called on its members to secure the necessary support from beef and dairy cattle producers to implement the "check-off" proposal.

The action was taken at the recent Cattlemen's annual meeting at the Holiday Inn at Cortland and is the culmination of more than two years of discussion and study by a committee of beef producers from the Cattlemen's Association and the New York Farm Bureau.

The Beef Marketing Order, if approved by a producer referendum, would raise an estimated $150,000-$200,000 a year for product promotion, producer information, market development and research.

The proposed marketing order calls for an assessment (with a $1 per head maximum) on every beef and dairy animal over six months of age sold for slaughter and for human consumption. This assessment would be levied on producers who raise specifically beef animals and on those producers who operate dairy herds and sell their cull cows for human consumption.

The proposed marketing order calls for creation of a nine-member advisory board including representation by beef and dairy farmers that would make recommendations to the Commissioner of Agriculture and Markets concerning the collection of funds, estimated budget needed for operation, and the most appropriate uses of the funds collected. The Commissioner would be authorized to contract for promotion, marketing, product research and informational services that would help create new markets for beef in New York State.

With this first step of our Association's approval of a Beef Marketing Order we are saying we know we must compete aggressively in the marketplace for our share of the consumer dollar," said Allen Peterson of Jamestown, president of the New York Beef Cattlemen's Association.

The steps to implementing the Beef Marketing Order are being initiated by the Cattlemen's Association which is calling on its members to sign statements of support for the order and to encourage other producers to do the same. In addition the Farm Bureau has taken similiar action following the approval of the Beef Marketing Order at its annual membership meeting.

Once enough signatures of support have been obtained to indicate industry lendorsement, the commissioner will call one or more hearings to obtain producer input before putting thje proposal to a referendum, Peterson explained.

U.S. livestock exports increase

ITHACA, NY – Livestock-related exports totalling $7.4 billion in value flowed from this country's farms to overseas markets in 1984, says a Cornell University animal scientist.

Total agricultural exports for the same period are estimated at $38 billion, thus livestock and livestock products have become a significant portion of the nation's agricultural sales to other countries. Export items include edible fats, hides, milk products, breeding stock, semen, embryo transfer technology, feeds and feed supplements, animal handling equipment, and pharmaceuticals for farm animals, as well as livestock.

Robert E. McDowell, professor of animal science in the New York State College of Agriculture and Life Sciences at Cornell, underscored the continued growth in livestock-related exports in a talk to a group of dairy farmers who attended the recent Cornell Dairy Days.

"These figures can be reassuring to beef catlemen in the United States," McDowell said, "because they know they will continue to have a market for the best beef cuts on beef cattle they produce."

Cuts of high quality from the best beef produced here, for example, often go to Japan and Saudi Arabia. Once there, the American beef may sell for $6 a pound as a specialty item or be served at top-flight hotels. In the U.S., the same cut would bring only about $2.50 a pound.

"It's a healthy market state, even for consumers," McDowell said.

Pork Prose

by
Kenneth B. Kephart
Extension Livestock Spec.
University of Del.

It's fair to say that the new discoveries in swine nutrition over the next decade won't lead to dramatic improvements in hog performance. But each year, those involved in nutritional research continue to provide us with more information to help shave the cost of production.

Here are a few summaries of recent nutritional research at the University of Illinois Acricultural Experiment Station.

High-oil Corn for Sows

There are a bunch of studies from a lot of universities that show advantages to adding fat to sow diets late in gestation and early in lactation. Two significant advantages are higher milk yield and an elevated fat content in the colostrum. For litters with low birth weights and in herds with preweaning survival of 80 per cent or less, these advantages usually outweigh the cost of fat.

The problem is handling. Getting the fat into the diet can be a headache. So researchers at the University of Illinois looked at the possibility of using high-oil corn. This contains roughly twice the fat of normal corn plus more lysine.

Does it work? Not as well as we'd like. High-oil corn does increase the fat content of the colostrum and the milk. And it tends to increase piglet birth weights. But on the bottom line, it does nothing for baby pig survival or weaning weights.

The real benefit from its use so far seems to be the savings in feed. This particular experiment covered the last 30 days of pregnancy and 28 days of lactation. During this time sows in the high-oil corn group ate 30 pounds less feed. At 8 cents per pound that's $2.40 saved per litter.

Fumaric Acid for Swine Diets

Other experiments at Illinois show benefits from adding organic acids to feed. Propionic, citric and fumaric acid all improve feed efficiency in four-week-old starter pigs. Propionic acid has the disadvantage of reducing feed intake because of its pungent odor. Citric and fumaric, while improving feed conversion, have no apparent effect on intake. But because fumaric acid is commercially available, researchers decided to study it further.

For the finishing pig, fumarate doesn't seem to do a thing. But for starter pigs (18 to 36 pounds), it really looks promising. At the optimum dietary level of 4 percent, growth rate was improved 14 percent. Feed efficiency was increased 15 percent.

No one yet knows for sure how this stuff works. It may help to activate protein digestion. It may lower pH in the gut to slow the growth of bacteria. And it may improve the absorption of some minerals.

Salinomycin--A New Antibiotic

Salinomycin is a lot like two products used extensively in the beef industry--Rumensin and Bovatec. You could correctly call any of these materials an antibiotic, a coccidiostat or an ionophore – which means they act against bacteria and coccidia, and they enhance the movement of ions across membranes. It all boils down to a savings in feed.

Previous trials at three universities and the present Illinois study show improvements in both weight gains and feed efficiency of 4 to 10 percent when salinomycin is fed at a level of 75 grams per ton of feed. The exact mechanism of this product is unknown. If it controls disease, the researchers say on-farm use might result in a better response. But if it improves nutrient absorption, the response would probably be less in commercial production since these pigs are generally less healthy than those at universities.

Salinomycin has another plus since it's not used in human medicine. Currently this antibiotic is approved for use only on poultry.

CL 263, 780–A Repartioning Agent

A repartioning agent is something that allows an animal to put more of his diet into lean tissue and less into fat. In one large Illinois study, adding 1 ppm of CL 263, 780 increased loin eye area by .5 square inches, reduced back fat by roughly 11 percent, and improved feed conversion by 12 percent. This is another additive that shows promise, but is not yet approved for use in swine feed.

In summary, we're continuing to find methods and materials to get more out of your feed dollar. This is important research–especially if Congress puts the crunch on penicillin and tetracycline

EARLY ORDER NOW FOR LOWER PRICES

What's he doing baling at this hour?

Whether it's early in the morning and there's still dew on the windrows, or late in the afternoon... he's out baling! He's treating his hay with Beacon Hay Pre-Serv*, and that means he can bale at up to 25% moisture! So, he can bring in his hay early in the day, perhaps before bad weather hits. Or he can bale two or three hours later in the afternoon. Or when the hay is almost field cured, but not quite.

What's more, he'll have better hay.

Because of its higher moisture content, there's less leaf shatter. There are more high-protein leaves that will turn more milk production. No wonder we call hay treated with Beacon Hay Pre-Serv SuperHay!

Start using this food-grade blend of preservatives, antioxidants and flavors on your hay yourself. Start making SuperHay, and start making super profits! Call your Beacon Advisor now.

Beacon — headquartered in Cayuga, New York. . . available throughout the northeast.

Pasture management can improve water quality

YORK – "Livestock can do serious harm to a stream's environment, not to mention the effects down stream," says York County soil conservationist Lynn Sick. "Their presence in the stream creates direct sediment and nutrient pollution to the water course."

Due to heavy traffic and over grazing, a stream's banks are often barren of vegetation during the summer months. This in turn often leads to accelerated erosion during heavy rains and spring thaws. "Much can be done to help improve water quality by eliminating this needless erosion," says Sick.

First evaluate your grazing area for water sources. Can you provide water to your livestock by other means? If the stream is the only source of water, why not allow the livestock limited access to a small section of the stream. This will save many tons of soil that would otherwise enter the stream. In many cases a small amount of simple fencing is all that is needed.

If underground springs are present in pastures, collection lines can be laid to intercept spring flow. These lines can be run together to a storage tank. Spring developments provide a good, clean source for watering livestock without harming the stream. Overflow from the storage tank can then be piped to a safe outlet.

A grassed filter strip should be maintained between the stream and pasture. Usually 30 to 40 feet is adequate and will create a buffer zone where sediment and nutrients may settle out before entering the stream. Fencing will be needed to protect this buffer zone. The grass can be easily mowed at hay time.

Poor pasture management can lead to over grazing and severe erosion. Pastures should be rotated to allow grasses time to recover and provide cover to the soil. Stockyards or loafing lots in pastures are very often located near the barn. These areas should be protected from excessive runoff.

Storm water from buildings and roads often increases the runoff volume many fold. Manure nutrients leave these sites with the runoff and are transported to streams. Water should be diverted from these sites where it can safely drain away. Small diversions above buildings and roads collect surface water in this manner. Proper rain spouting is also critical in controlling runoff on large buildings.

If you have problems with livestock along streams or excessive runoff from livestock areas, now is the time to plan ahead to correct the problem this spring. Technical assistance can be obtained by contacting local Soil Conservation Service personnel.

Cattle numbers continue slide

HARRISBURG – Pennsylvania farmers had 1,960,000 cattle and calves on hand on January 1, according to the Pennsylvania Crop and Livestock Reporting Service. This is a one percent decline from the January 1984 level of 1,970,000 head.

The Keystone State's calf crop for 1984 was 830,000 up one percent from the 1983 crop. The 925,000 cows that calved, totaled one percent less than a year ago. Milk cow numbers, at 735,000, were down one percent from last year. Beef cows, at 190,000 were four percent below a year ago. Milk cow replacement heifers 500 pounds and over were seven percent above last year at 41,000.

Other heifers 500 pounds and over, at 43,000, were down nine percent. Steers in the same weight category, at 230,000 were down four percent, while bulls, at 33,000, were down eight percent from 1984. All calves under 500 pounds were down one percent from last year at 378,000.

There were 47,000 Pennsylvania farmers who had cattle and 21,000 operations with milk cows.

All cattle and calves in the United States on January 1 totaled 110 million head, down three percent from the 114 million in January 1984 and five percent below the 115 million two years ago. This continues the recent downward trend in cattle inventories begun two years.

All cows and heifers that have calved, 46.2 million, are down five percent from 48.6 million a year ago, and down six percent from two years ago. Beef cows, at 35.4 million, are six percent below January 1984. Milk cows, at 10.8 million, are down three percent from January 1984.

The 1984 calf crop is estimated at 42.5 million, down three percent from 1983 and four percent from 1982. This calf crop is down two percent from the expected calf crop published last July.

Control Johnsongrass for better soybean yields

MANHEIM – With soybean planting approaching, Lancaster County growers should make plans now to control a weed that can seriously hinder yields, according to a local expert

"Johnsongrass infestations will undoubtedly pose major problems for local growers again this spring," says Mr. Lester Gehman, owner of G & G Feed & Supply in Manheim. "Fortunately, with a properly designed weed control program, growers will be able to control this perennial menace before any serious yield damage can be incurred."

On most Lancaster County farms, tillage plus incorporation of a pre-emergence herbicide in the spring has been the traditional method of controlling rhizome johnsongrass. "While tillage can eliminate emerged growth, in most cases, it cannot prevent regrowth from the extensive underground rhizome network," Gehman observes. "This regrowth will compete with the crop for valuable nutrients, water and sunlight, and may require further weed control measures."

Many growers are now finding that a preplant application with a post-emergence herbicide, such as Roundup, provides season-long rhizome johnsongrass control. A label-approved residual herbicide program also should be followed for control of seedling johnsongrass.

"When applied at the low one quart/acre rate, Roundup will translocate throughout the entire plant into the roots, controlling both above-and below-ground growth, and preventing regrowth," he explains. To obtain optimum results with this chemical program, farmers should follow low rate technology (LRT) recommendations developed by Monsanto. This concept involves low water volumes, slight equipment adjustments and additional surfactant.

"Roundup should be sprayed using only five to ten gallons of water per acre," he notes. "It should be applied through flat fan nozzles, spaced 20 to 30 inches apart with boom height adjusted to create a 30 to 50 percent spray overlap." A non-ionic surfactant should be added at the rate of two to four quarts per 100 gallons of spray solution, depending upon the amount of active ingredient in the surfactant.

"By following this weed control program and controlling rhizome johnsongrass before the weed can actively compete with the crop, growers can realize higher soybean yields this season," he concludes.

Penn State to offer 4-day sheep tour

UNIVERSITY PARK – Penn State is offering a four-day tour of some of the most progressive sheep farms, research centers and lamb and wool processing operations in the region beginning Monday, Apr. 22 through Thursday, Apr. 25.

The tour includes on-site visits to the Somerville Sheep Farms in Somerville, New Jersey, the USDA Research Center in Beltsville, Maryland, The Virginia Polytechnic Institute in Blacksburg, Virginia, several sheep producing farms in Virginia, and the Appalachian Lamb Company, a processing plant in Greencastle, Pennsylvania

Tour costs include overnight accommodations for three nights with breakfast and round-trip motor coach transportation from Penn State. Total cost of the four-day tour is $167, based on double occupancy and full registration of 47 people.

The preregistration deadline in Mar. 29. For more information and a registration form, contact your county Penn State Cooperative Extension Service Office or Short Courses in Agriculture, 306 Ag. Admin., Building, The Pennsylvania State University, University Park, PA 16802, telephone (814) 865-8301.

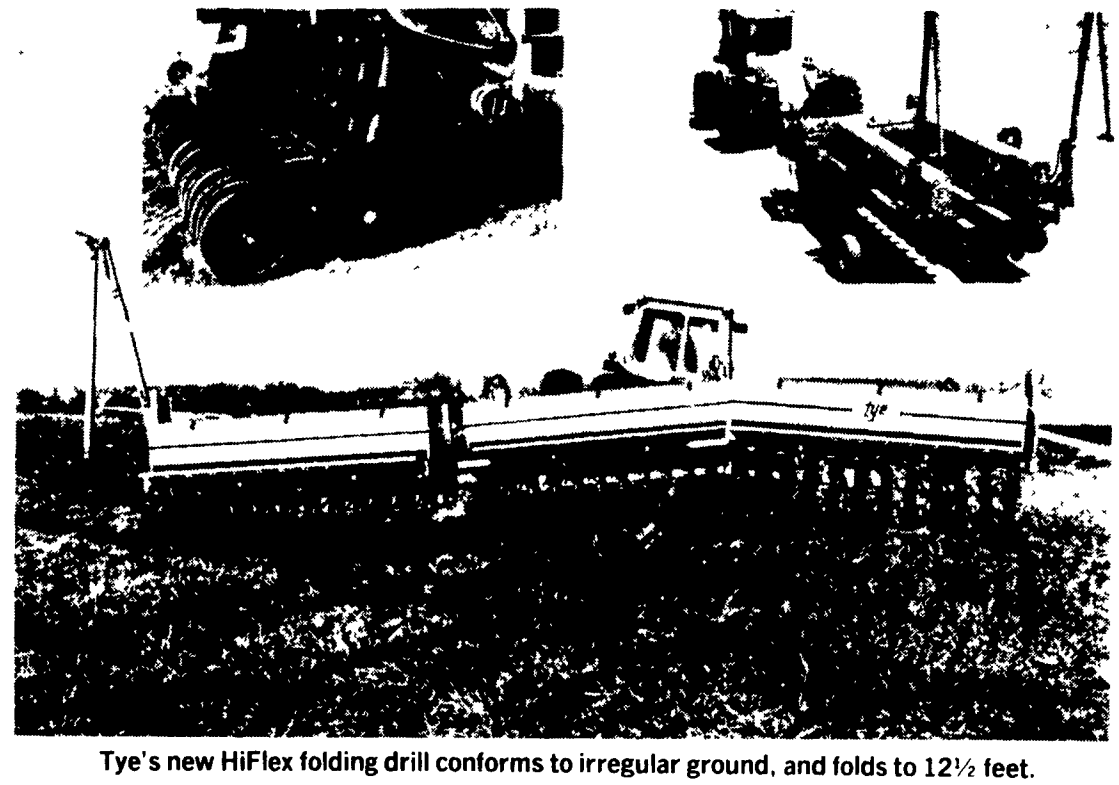
BUSINESS NEWS...



Tye's new HiFlex folding drill conforms to irregular ground, and folds to 12½ feet.

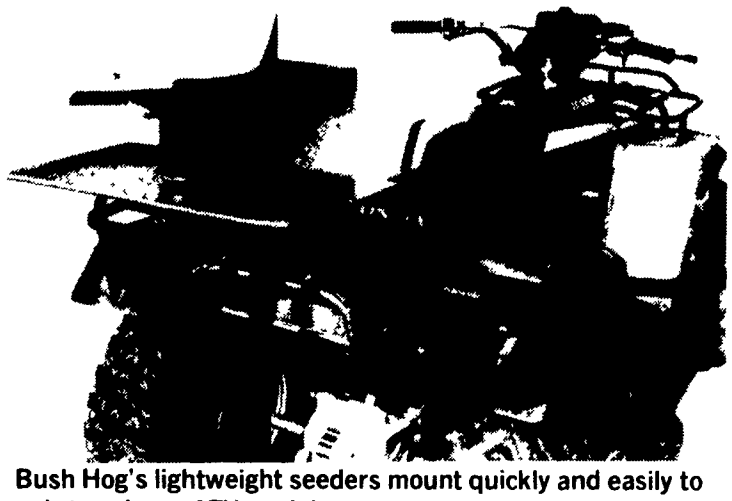
Tye offers HiFlex folding drills

LOCKNEY, TX – Tye announces the newest addition to its full line of folding drills, the Tye HiFlex. HiFlex Folding Drills are designed to excel under adverse field conditions with precision planting maintained over terraces, rough ground, and waterways.

The heart of the new Tye HiFlex Folding Drill is a completely new planting unit. Each row unit is equipped with a new parallel arm mounting to give more than 18 inches of vertical flex. "Walking Beam Action" between the double disc openers and individual press wheels maintain depth control and planting precision over rough, uneven fields. New 19-inch split metal press wheels or 2X13 Vee press wheels provide the depth control and seed/soil firming action required for varying field conditions.

The HiFlex Folding Drill is available in 30 and 40-foot widths with popular 8, 10 or 12-inch row spacing. With all its new features it still folds hydraulically to a narrow 12 1/2-feet for easy transport. The new Tye HiFlex has a tough 7 X 7 main frame. It also features three-section flexibility with high flotation lift/gauge wheels. A unique ground driven hydraulic system powers the internally fluted precision seeders to plant mile after mile of soybeans, wheat and grain.

For more information, see your nearest Tye dealer or call or write The Tye Company, Box 218, Lockney, TX 79241, (806) 652-3367.



Bush Hog's lightweight seeders mount quickly and easily to nearly two dozen ATV models.

Bush Hog seeder adapts to popular ATV's

CARLISLE – Bush Hog's new mounted seeder can be adapted to fit 22 of the most popular three and four-wheel all terrain vehicles, according to Bob Weaver of Carlisle, Bush Hog sales representative for Pennsylvania and New Jersey.

"The MSD-1 can be used by homeowners, farmers with small plots and hunters seeding food plots to broadcast grass or small grain seed or fertilizer," Weaver said. "The coverage area ranges from 15 feet with grasses and other small seeds up to 45 feet for fertilizer and larger seeds such as barley."

Power is provided by a 12V electric motor that can operate off the ATV's electrical system or from an auziliary battery. The dispersal system features a maintenance-free one bushel capacity translucent hopper and an aluminum seed fan. The motor and fan are protected by a mud and water shield.

For further information, contact Bush Hog, Department NR-MSD, P.O. Box 1039, Selma, AL 36701.

Kelley debuts two insect control products

HOUSTON, Tx. – Kelley Manufacturing has begun immediate nationwide distribution of the Flytrap, a new product designed to kill the common housefly without using toxic sprays, poisons or fly paper.

The Flytrap combines an all-natural attractant and uses a specially designed container to trap bothersome houseflies. Drawn by the attractant when mixed with water, flies enter the trap and drown. Flytraps are recommended for outdoor and garage use. The Flytrap is safe for men, pets, and the environment.

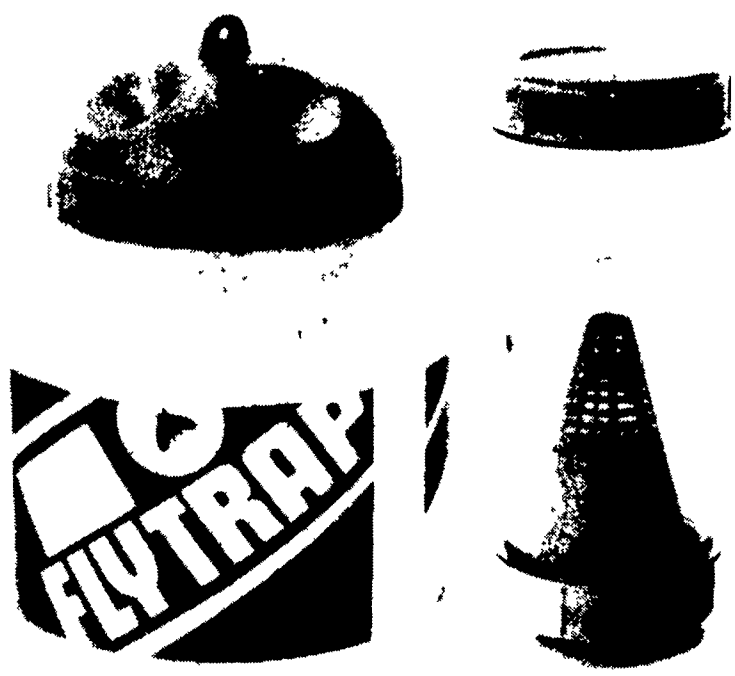
"The Flytrap will trap on the average seven-times the number of flies per pack of attractant than fly paper or similar products," said Fred Jackson, vice president, marketing, Kelley Manufacturing.

The Company's Jacket Trap offers an economical, effective way to eliminate the irritation of bothersome yellowjackets.

The Jacket Trap only attracts yellowjackets; it will not attract honey bees or other wasps.

The Jacket Trap has a unique design that takes advantage of the yellowjacket's natural anti-gravitational behavior and positive light responses The yellowjacket is first attracted by the yellow trap and the scent of the enclosed attractant. It is lured up the trap through dimpled openings

(Turn to Page D8)



Kelley's new Flytrap (left) and Jacket Trap help to control flies and yellowjackets around farm and home.

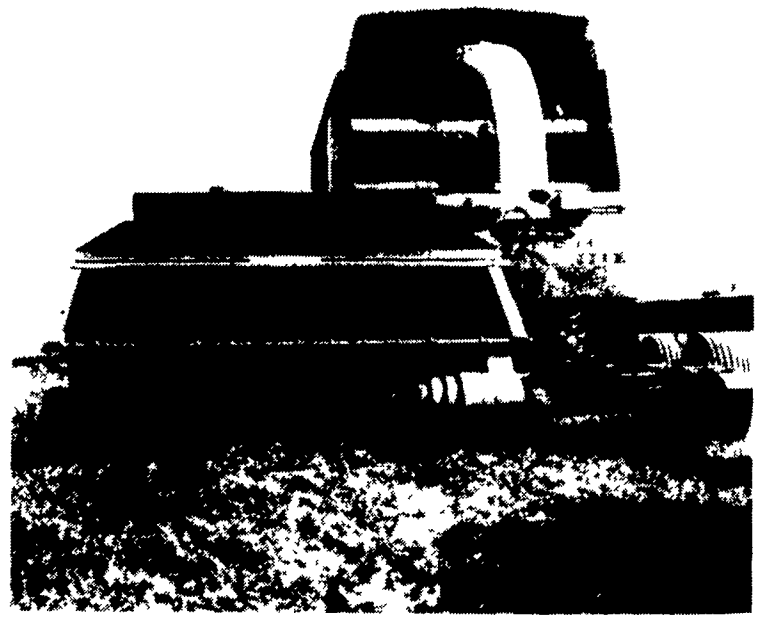
Gehl forage harvesters feature load management system

WEST BEND, Wisc. – Gehl Company has introduced a new automatic load management system on two of its new forage harvesters. Called the Auto-Max System, it is designed to shut down the feedrolls and attachment the instant they start to overload. The operator can compress the overload and start it feeding smoothly back into the machine without ever leaving his tractor seat.

To accomplish this breakthrough, Gehl eliminated shear pins, put an electric clutch on the feedroll and attachment transmission and attached two load sensors – one on the upper feedroll and one on the attachment drive. When there's an overload these sensors will disengage the electric clutch, stopping the feedrolls instantly.

This is the point where shear pins would normally have to be replaced, but because there are no shear pins, the operator never has to leave his tractor seat. He simply shifts back to neutral to reset the clutch. Then, while still maintaining operational rpm, he shifts into forward again and the overload will go through the harvester. These few seconds are usually long enough for the crop to compress and be fed smoothly back into the cylinder.

"It's a tremendous breakthrough for reducing machine downtime," states Phil Fleming, a Gehl divisional engineer, who headed up the development of the new system. "The operator will realize two great savings with this system. First, because there are no shear pins that can shear and have to be replaced, the downtime from an overload has been reduced to a few seconds. Secondly, and most importantly, the operator can run his harvester at greater capacity, crowding the limits of the feedrolls and the attachment. This allows him to improve his total harvesting efficiency."



Gehl's new Auto-Max System automatically shuts down the forage harvester in the event of an overload.

Just as the load sensing system protects the harvester from overloads, a new speed monitoring system protects the unit from plugging the blower and deflector because of drops in tractor rpm. A speed monitor is mounted in the feed delivery system.

When the speed of the blower drops below 70 percent of the optimum rpm, the monitor automatically disengages the clutch, shutting down the feedrolls and attachment. With the incoming material stopped, the tractor can regain its rpm allowing the operator to go back to chopping.

Fleming noted that the system is extremely simple to operate and once the operator knows what speed the monitor will disengage the clutch, he can anticipate the system by watching his tractor engine rpm.

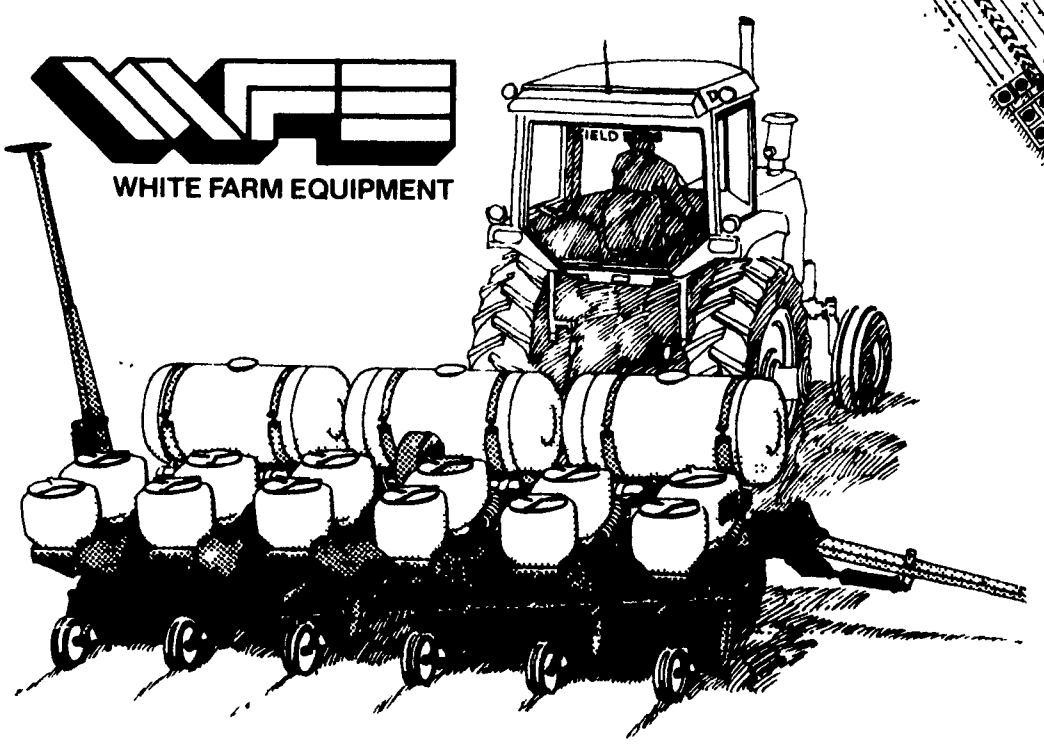
The Auto-Max system is standard equipment on the new Gehl 1260 model and an option on the new 1060

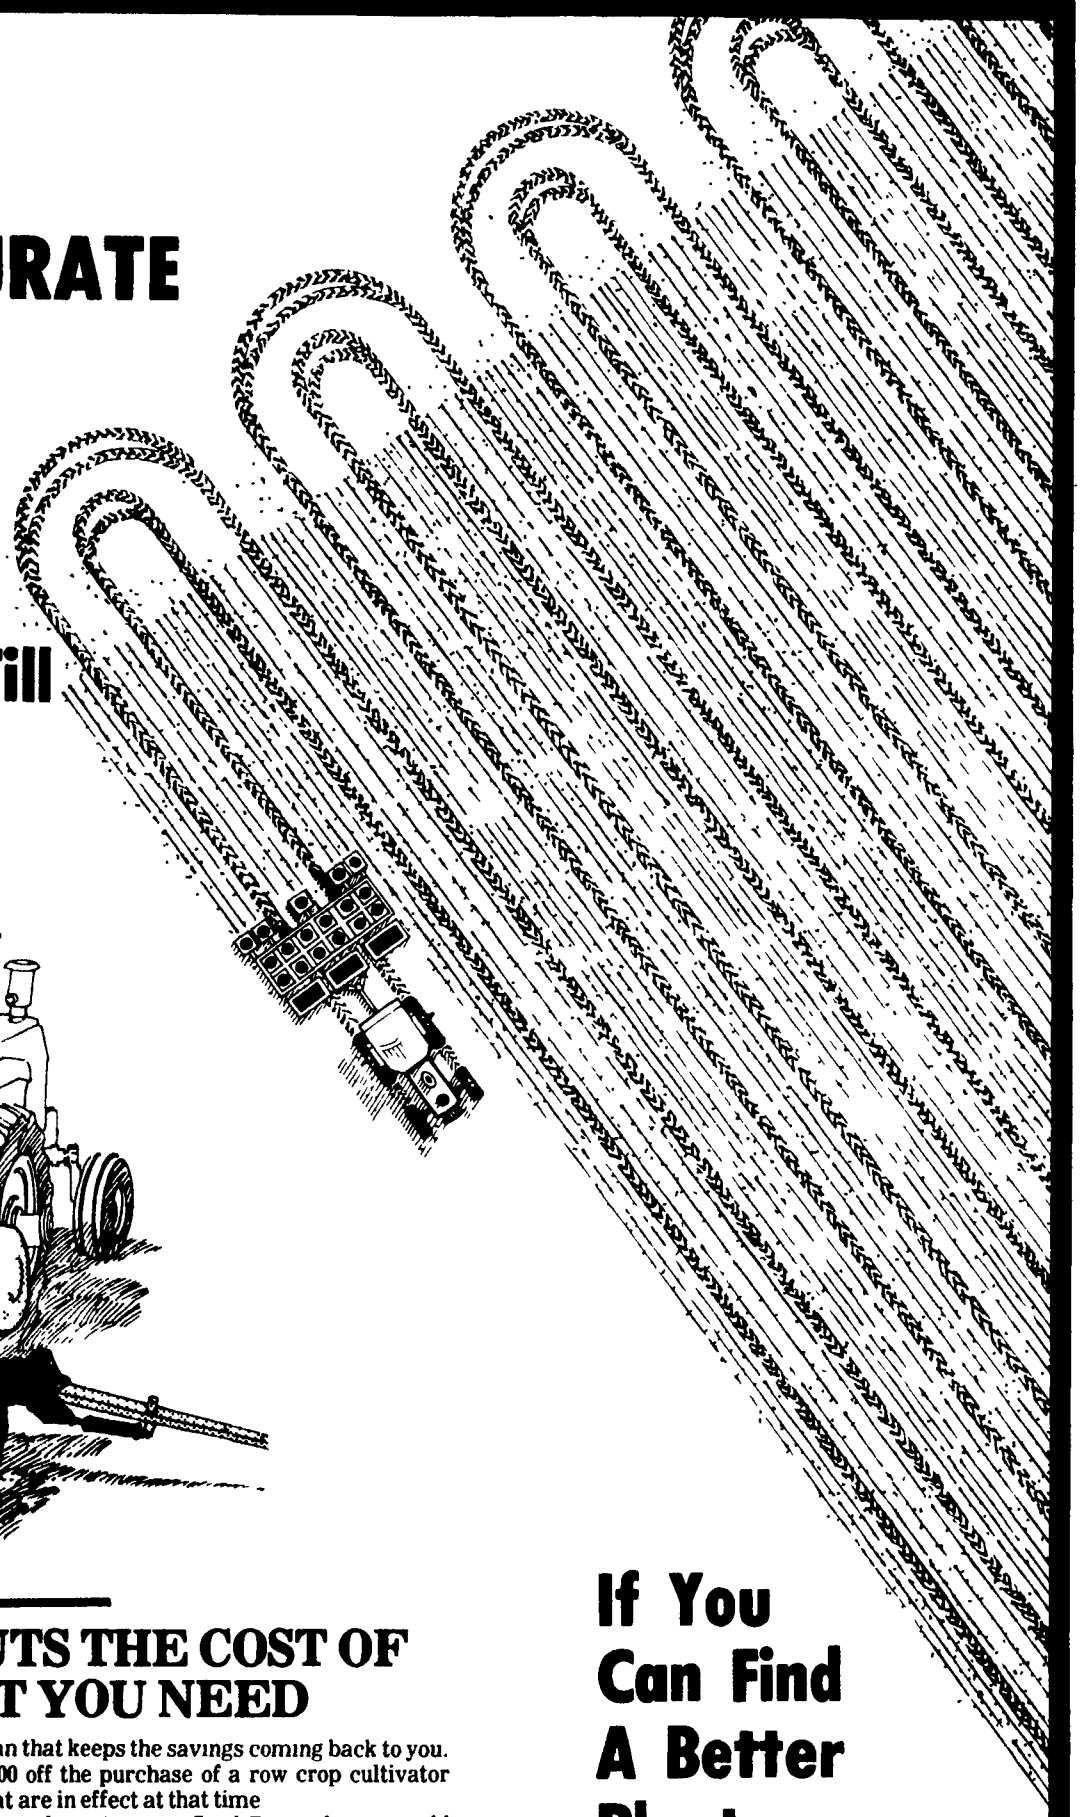
NOBODY

BUILDS A MORE ACCURATE PLANTER THAN THE

SEED BOSS®

In Conventional, Minimum Till Or No-Till





A LONG-TERM PLAN THAT CUTS THE COST OF BUYING THE EQUIPMENT YOU NEED

White Farm's innovative Equipment Cost Control Option — ECCO — is a plan that keeps the savings coming back to you.

Buy a Seed Boss® planter and get a certificate good for an additional $500 off the purchase of a row crop cultivator anytime in the next five years. Anytime. Regardless of any other discounts that are in effect at that time

Seed Boss accuracy is a value in itself. And because of the long list of attachments, your Seed Boss adapts — add no-till, strip-till or ridge-till equipment. Or get a wide-row planter that converts to a narrow-row bean planter in less than 20 minutes.

And now, extra value is packed in every planter. ECCO is savings — an extra $500 after you've made your best deal with the dealer.

ECCO. The savings keep coming back. Your nearby White Farm dealer has details.

Buy a planter and get the option to save on a row crop cultivator anytime in the next five years.

If You Can Find A Better Planter, We'd Like To See It!

Plant several hybrides to cut risk, Cargill says

MINNEAPOLIS, MN. – Don't base selection of your 1985 corn hybrids totally on the results from your 1984 crop. Instead, look at yield data from two to five years, advises Dr. Jack Carlson, agronomy services manager for Cargill Seeds.

"Relying on one year's results to make yield selections could cost you 30 to 50 bushels per acre in reduced yields," said Carlson. "A hybrid that yields well most years could fall short in one particular year on your farm. But that's no reason not to raise it again. Certain genotypes perform poorly under certain climatic conditions. It simply emphasizes the importance of planting several hybrids to spread your risk."

A hybrid that lodges just one year out of several might be one of your best producers over time, said Carlson. That's because there often is a trade-off between good stalk quality and yield. Growing conditions in the eastern Corn Belt during 1984 demonstrated this conflict.

"The spring was cold, wet and late. Midsummer was hot and dry, and the fall was wet and late," said Carlson. "Some hybrids with consistently high yields severely lodged."

This can partly be explained because a large ear size was created early in the year but later dry weather limited the amount of sugar produced to support the plant, Carlson said. The sugars then primarily accumulated in the ear and the roots and stalk were shortchanged. The stalk fell down, even though the hybrid had excellent yield potential.

"To a degree, the corn plant itself must choose between stalk strength and grain yield," said Carlson. "So it's important not to overestimate the importance of a strong stalk. It's not logical to expect stalks that stand 100 percent of the time."

Producers who plant 300 to 400 acres of corn should plant at least four or five hybrids to spread production risk, said Carlson. Maturity dates also should be varied. This spreads the time when hybrids pollinate and are at the greatest risk.

He urged caution when analyzing data from your own test plots. "Too often there is so much natural variability in the field that yield results are not reliable. Putting out a proper test plot may take more time and effort than you're willing to spare," Carlson said. Analyze data from county, state and company yield trials from several years and several locations before making planting decisio dvised.

UNIPEL® 13-34-10
fertilizer can get your corn crop off to a super start:

It has a high concentration of water-soluble Phosphorus that gets to young seedlings quickly Helps plants establish a good root system – the starting point for top yields. Its quick-acting and long-lasting Nitrogen team up to feed the young plants for full yield potential, continually from sprouting to harvest.

This is the Starter Special that corn growers know from good experience It's highly effective as a banded starter. And it's SAFE . . . no chance of ammonia damage to tender, young seedlings when used as a "pop up" and applied directly with the seed at 50 lbs./acre.

How can we fit UNIPEL 13-34-10 into your corn fertility program?

Streamline your field work for earlier corn planting

The reality of cold, wet, late springs has hit many Corn Belt farmers particularly hard the last two years, and made it difficult for them to apply fertilizer, incorporate herbicides and plant corn on schedule.

However, growers can now speed up their field operations and plant earlier because of new developments in herbicide and fertilizer application, according to John Rogers, technical specialist with Stauffer Chemical Company.

"You can modify your application program to help get fertilizer and preplant herbicides applied and incorporated faster," Rogers says. "You'll be able to plant earlier, which increases the chances for higher yields."

Rogers offers several suggestions for speeding up field work and planting corn earlier:

•**Combine Applications.** Mix herbicides with liquid or dry fertilizers and complete weed-and-feed applications in a single field operation. A preplant incorporated (PPI) herbicide such as Sutan or Eradicane, in liquid form, can either be impregnated on a dry blend of N,P and K or custom sprayed with a liquid fertilizer.

•**Include N in weed-and-feed mix.** Consider applying dry or liquid nitrogen with your P and K for weed-and-feed. The savings in time, labor and equipment costs may justify the price difference between dry or liquid N and anhydrous ammonia.

•**Hire a custom applicator.** An applicator's fee may be well worth the time and labor costs saved in hauling water, mixing herbicides and filling tanks yourself, particularly if he applies both herbicides and fertilizer in one trip. Incorporate the mixture as you prepare the seedbed for planting.

•**Recognize incorporation intervals.** New labels for PPI herbicides give you more time to mix them into the soil after weed-and-feed applications. Sutan+ or Eradicane impregnated on dry fertilizer can be incorporated anytime during the same day it is applied. You have up to four hours to incorporate these herbicides when they're custom sprayed with a liquid fertilizer. The soil surface must be dry at application.

•**Know one-pass incorporation conditions.** You can save time by incorporating PPI herbicides in one tillage pass, provided the soil has been adequately prepared. Fall-tilled cornstalk ground or untilled soybean stubble is best suited for one-pass incorporation. You should use tillage equipment which provides thorough mixing of herbicides in the soil. Two-pass incorporation is recommended with any other soil conditions, including hard, lumpy soil types or spring-plowed ground.

•**Buy herbicides in bulk.** If you apply your own herbicides, bulk handling can save you up to 30 minutes with every refill, since there's no need for pouring herbicides out of the jugs or cans. This means fewer stops and starts, and lets you cover more acres per day when your fields are dry enough to work. Bulk handling also eliminates the time-consuming task of rinsing and disposing of herbicide containers. Stauffer will begin offering the corn herbicides this year in 175-gallon, polyethylene mini-bulk tanks. These tanks are refillable by your bulk dealer and become your property when you purchase the herbicide. You can treat from 175 to 300 acres of corn with each tankful of herbicide.

•**Use a premix.** A premixed herbicide like Sutazine+ – a package mix of Sutan+ and atrazine--not only saves you mixing time but also eliminates the problem of achieving an accurate tank-mix ratio. A permix in bulk form reduces your down time. Simply pump the herbicide from the bulk tank to your own tanks, fill with water or fertilizer, resume spraying.

New clipboard for field record keeping

CEDAR RAPIDS, Iowa – Farm Home Offices has assembled a kit to make the job of keeping field records easier. A 6½ x 9½" sturdy aluminum clipboard provides a smooth handwriting surface attached to a durable weatherproof box that protects all you carry inside.

This clipboard holds a newly designed 5½ x 8½" pad of 50 preprinted field record sheets. Use them for farms or fields to document tiling, spraying, planting, fertilizer, tillage practice and harvesting.

The pad of 50 field records alone sells for $2.95 plus $1 shipping. the aluminum clipboard box with record pad sells for $19.95 plus $2.50 shipping, from Farm Home offices, P.O. Box 1207 Cedar Rapids, Iowa.

Farm Home Offices's clipboard.

USDA lists Reams 266 as discount tobacco

WASHINGTON - A flue-cured tobacco variety known as "Reams 266" has been designated as a discount variety, according to USDA's Agricultural Stabilization and Conservation Service This means that Reams 266 will be supported at a level that is 50 percent of the price support level established for acceptable varieties.

Discount varieties of flue-cured tobacco have low acceptability to the trade and do not have the same commercial value as acceptable varieties. Since 1957 the loan level for discount varieties has been 50 percent of the level established for acceptable varieties of tobacco, in order to prevent large quantities of discount varieties from being forfeited to the Commodity Credit Corporation under the price support loan program.

The Commissioners of Agriculture of the five major flue-cured tobacco-producing states–Florida, Georgia, North Carolina, South Carolina and Virginia–had petitioned the Secretary of Agriculture to designate Reams 266 as a discount variety effective for the 1985 crop year. Their request was based on quality tests conducted in 1983 by the Flue-Cured Tobacco Quality Committee on Varieties. USDA had asked for comments on the proposal and all were favorable.

The rule was published in the Federal Register on January 31, 1985

The Power Of One More Lactation

How old are your cows when they earn their first true nickel of profit in their lifetime? It could be older than you think! One thing is certain; it's longer than it used to be.

In the past, by the time a cow completed one lactation she had made enough profit to pay most of the cost of raising her to her time of first calving. Now, she may require almost two lactations. In other words, she may be four years old before she breaks even in life!

A cow that stays in the herd an average of only three lactations would only have one profit-making lactation in her life. Adding just one more lactation—culling her at 6 years rather than 5—could double her lifetime profits! Read that again, and think about its significance!

In other words, decreasing your culling rate from 33 percent down to 25 percent could double your herd profits. These figures will vary a lot from farm to farm due to: replacement costs, production and profit margin per cow, and reasons for culling. How do you fare? Use the form below. Push the pencil on your herd and dare to find out for yourself.

If you've taken the time to complete the form, the figures speak for themselves. There is little I can add except, to survive, we have to be good at what we are doing.

If you feel brave, drop the price of milk 50 cents and adjust total milk income on line 3 accordingly. See how a 50 cent change in milk prices affects the figures.

The figures we've been working with so far have been for the entire herd, and for an average. How would individual cows compare? Enter their individual "returns over feed" figures on line 28. Subtract the adjustment factor on line 29, and enter the answer (her profit before replacement costs) on line 21. Enter her lactation number on line 23. Then, using these figures, complete the calculations on lines 22 through 27.

Similarly, change the number of heifers on line 16 and the number of lactations on line 23 to see the difference this makes.

If you want to see the impact of a 10 percent increase in production per cow, increase the milk income on line 3 by 10 percent, and deduct the cost of extra feed.

Hopefully, this little exercise gave you a better feel of how much longevity, production, heifers, and milk prices affect your profits, and maybe it helped you spot some cows that need to be replaced.

Wayne County milking seminar set

HONESDALE — A Milking Management and Dairy Health Seminar will be held Tuesday and Thursday, Feb. 26 and 28, 11:00 a.m. - 3:15 p.m., at the Central United Methodist Church, Honesdale. The event is being sponsored by the Wayne County Agricultural Extension Service and area milking equipment dealers.

Topics to be presented during the two-day educational event include: development and anatomy of the udder, milking machine operation and maintenance, evaluation of milking systems, stray voltage, managed milking, udder health, somatic cell counts, culture testing of milk, use of CMT, and an udder health program.

Instructors will be John Creighton, Edward Pruss, and Dr. John Burlein. Three films and seven slide sets prepared by Penn State for the seminar will be shown.

Pre-registration is required and there will be a modest registration fee to cover educational materials and other expenses. To enroll, contact the Wayne County Extension Office at 717-253-5970, ext. 114.

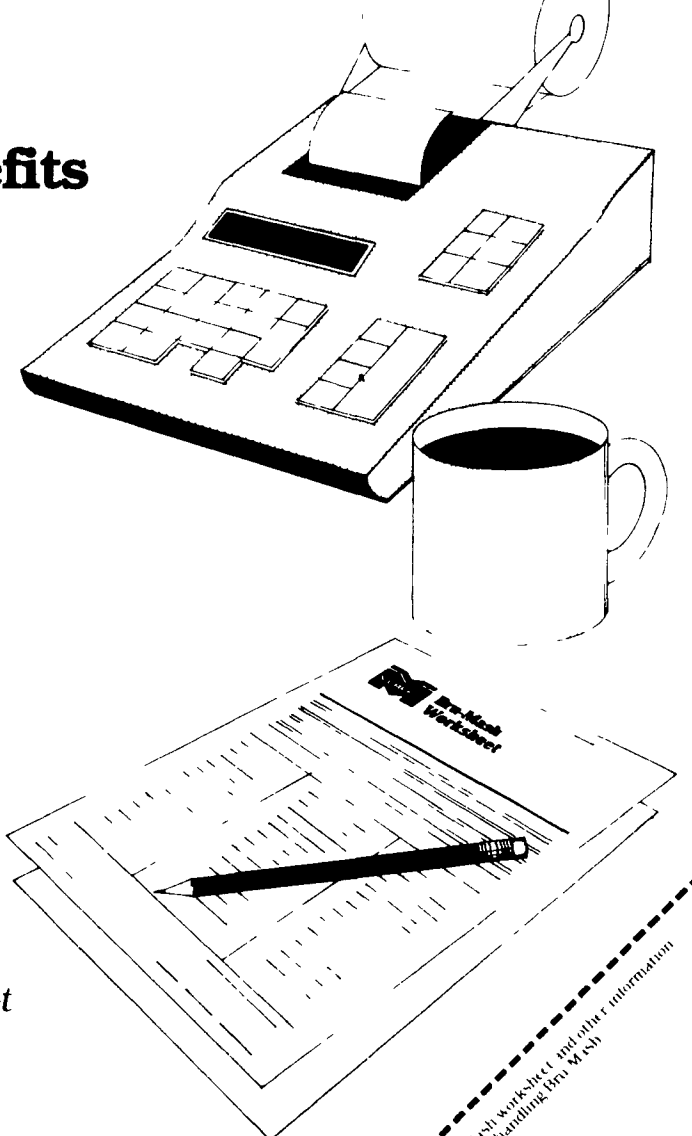
Here's how dairymen in this area are selling themselves on Murphy Bru-Mash

A little arithmetic shows Bru-Mash benefits

Your Murphy representative has a simple worksheet form he'd like to go over with you and help you fill out — using your feeds, your costs and ingredient prices in your area. Complete the arithmetic on the form and we think you'll see why Murphy Bru-Mash has become so popular so quickly.

The secret of Bru-Mash is really not much of a mystery. Bru-Mash combines the advantages of highest quality by-pass protein with excellent palatability and digestibility. Result: Your top cows eat better and convert more of what they eat into milk. They stay on feed longer and they make maximum use of your homegrown dairy feeds.

Give us a call and let us "push the pencil" with you soon.



MURPHY BRU-MASH

Brewers Grains and a Whole Lot More.

MURPHY PRODUCTS COMPANY, INC.
c/o Stroh Brewery, PO Box 2568, Allentown, PA 18001
1-800-257-1102

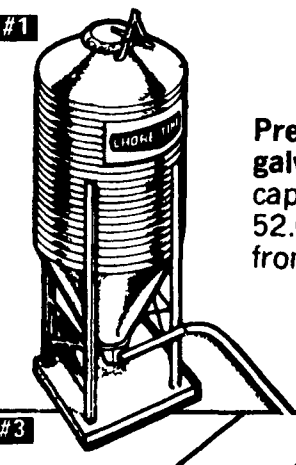
DEALER INQUIRIES INVITED

CHORE-TIME®

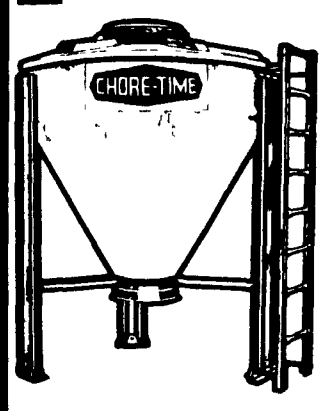
5 WAYS TO IMPROVE YOUR DAIRY PROFIT PICTURE WITHOUT SPENDING A FORTUNE

#1



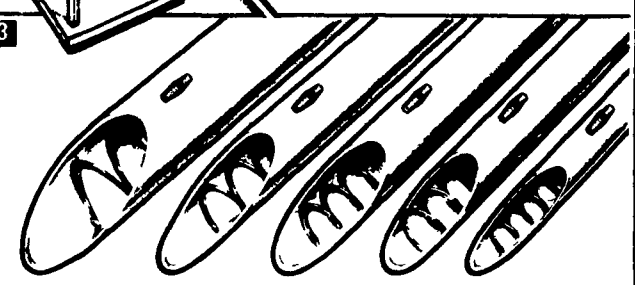
Premium quality all-galvanized feed bins with capacities from 2.9 tons to 52.0 tons and hopper slopes from 45° to 67°.

#2



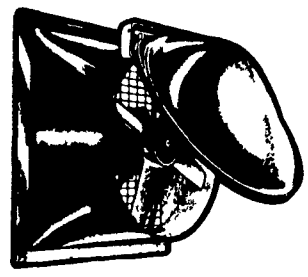
Polyethylene feed bin has 3000# capacity and low profile, making it perfect for high moisture corn applications.

#3



Chore-Time's genuine FLEX-AUGER® is available in 5 models, with capacities ranging from 15#/min. to 220#/min. Two systems also available for High Moisture Corn.

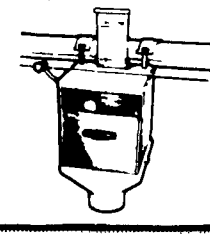
#4

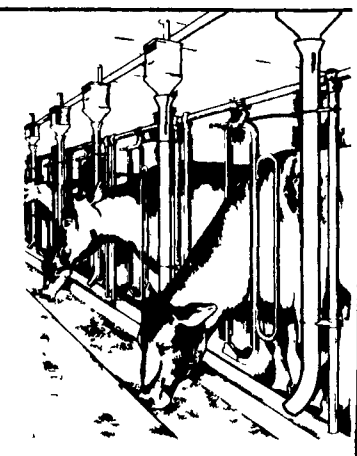


Advanced, fully automated air systems ventilate your dairy or calf barn efficiently and economically for greater animal comfort and productivity.

#5

Increased milk production and feed savings from automated multiple daily grain feedings.





Even if you can't see your way clear to build all new facilities, you can upgrade your existing facilities with a Chore-Time system.

Call us or come by today and let us help you modernize at low cost.

Cut soybean production costs with these methods

NEWARK,Del. – With low soybean and other grain prices, farmers are looking for ways to keep production costs down in order to prevent severe cash flow problems. One choice they can make is to plant fewer full season no-till beans and drilled beans.

By planting beans in the conventional way and using available equipment to its maximum, you can reduce your annual cash outlay," says University of Delaware extension agricultural agent Derby Walker. "Since ownership, not operation, is the main cost associated with equipment, this makes good economic sense. By going with conventional beans in rows, you have the option to cultivate and won't be trapped into using chemicals if a weed problem develops after planting. You can cultivate a lot cheaper than you can use chemicals. However, if the acreage is large, you may not be able to get all of it cultivated in time, which is something to consider."

Here's another practice which could reduce production costs. Plant soybeans in rows wide enough to spray with drop nozzles. "This will increase the selection of postemergence herbicides that can be used if preemergence controls aren't adequate," the agent says. "For example, with drop nozzles you can use 2,4-DB or 2,4-DB with Lorox to clean out the weeds. Using 2,4-DB this way will cost only a couple of dollars per acre compared to some broadcast treatments which cost $12 to $15 per acre. This approach can greatly help your cash flow.

"You'll need a boom sprayer with the drop nozzles fastened down so they won't bounce around, since the spray should contact only the lower third of the soybeans to avoid injury," Walker adds. "So when you have a few extra hours this winter, rig up a cultivator or use some other means of locking down the drops."

Another option is to band spray soybeans with a sprayer. This makes it possible to treat plant rows only, leaving the middles untreated for subsequent cultivation and reducing chemical costs by 30 to 50 percent. "If you plan to use this approach to weed control," says Walker, "plant the beans conventionally using your normal herbicide program. Then apply postemergence treatments in a 15-inch band and cultivate a few days later. The material used will determine when you can cultivate."

Another advantage of a band sprayer is that it can apply insecticides directly to plants without wasting spray material between rows. This practice, too, will reduce chemical use and production costs without reducing pest control.

"A good scouting program will also reduce your pesticide bill," the agent says. "During the winter months gather all the information you can on pest management techniques that can benefit your farm. If you grow soybeans, find out about ways to control soybean insects and how to determine when controls are necessary."

For example, during the growing season soybeans can often lose up to 35 percent of their foliage without loss. By knowing this, growers can determine when spraying is likely to pay. If the insects present are going to remove only 10 percent of the leaves, treatment will likely cost more than can be saved in control.

STOCKY NEW FORDS!

TOUGH NEW 1000 SERIES DIESELS UNDER 30 HORSEPOWER

Whether you want to mow an acre or a hundred dig a posthole or a sewer trench grade a driveway plow a field or load a truck we've got a Ford 1000 Series tractor for the job!

These new compacts come with a combination of features you can't get anywhere else Smooth efficient diesel engines Standard 10 or 12 speed transmissions Hydrostatic and Synchro Manual Shuttle transmission options Standard 540 rpm PTO and Category I three point hitch Diff lock Optional front wheel drive And a choice of more than 50 matching implements and attachments

Get spread patterns of up to 50 ft!

Now, spread manure faster, easier with the new line of Scavenger spreaders from Hedlund-Martin.

Based on a whole new design-technology, Scavenger is built specifically for today's manure-handling needs. With Scavenger you can spread most kinds of manure—liquid, semi-solid, pen pack (even frozen)—all year 'round. And you'll do it more efficiently with a lot less bother.

Available in five sizes—from the new 182-bushel Scavenger Mini to the 386-bushel model 1678. There's a Scavenger just right for your operation See them on display today.

Exclusive square-tube auger creates unique "pulse action to thoroughly break up manure

Martin-design Variflo discharge throws manure up to 50 ft —lets you choose your optimum rate of application.

Auger moves hydraulically up and down to eliminate bridging—cut through wintertime freeze ups

Sealed Uni-body construction stands up to hard use year after year

Wasps to reduce fly problems on dairy farms

ITHACA, N.Y. — The ubiquitous fly is more than a nuisance on dairy farms. Flies bug cows so much that they cause almost $220 million a year in losses on dairy farms around the country.

There is now hope that tiny wasps, no larger than fleas, can serve as weapons in the war against flies, according to Don Rutz, a veterinary entomologist at Cornell University.

Flies harm animals on the farm by transmitting diseases, causing blood loss, interfering with bovine weight gain, flustering the animals -- which can reduce milk production – and causing general public health concerns.

Several species of wasps, natural parasites of flies that harm neither humans nor animals, are being studied as part of an integrated pest management system designed to control flies on dairy farms. By learning about the wasps' biology and seasonal attack patterns on fly pupae, it is believed that parasitic wasps could be used to effectively combat buzzing, annoying flies.

"Although we don't expect biological control methods to be a panacea, we believe that they could have a significant impact on the fly problem," says Rutz, an assistant professor of entomology in the New York State College of Agriculture and Life Sciences at Cornell. He has been studying the biological control of flies for more than ten years.

There are four major species of flies that taunt cows in the Northeast: the house fly and stable fly that dominate in confined areas, and the horn fly and face fly that pester cows on pasture. The horn fly and stable fly are bloodsuckers that can debilitate cows while the other two are persistent nuisances.

Traditionally, insecticides alone have been used to control flies. These are not only costly, but they also have the potential to destroy a fly's natural enemies, such as the parasitic wasps, and to contaminate milk and meat and pollute the environment. Also, flies eventually build up resistance to insecticides, rendering the chemicals ineffective.

Parasitic wasps suppress fly populations by drilling holes in the pupal cases of the flies where they lay eggs. Upon hatching, the emerging wasp larvae devour the fly pupae.

Rutz's team has surveyed more than 80 farms throughout New York State to determine which parasites are indigenous to various areas and different types of farms, and to try to determine whether various manure management and animal housing systems affet the population densities of the flies or their parasites.

These researchers also are studying parasites in the laboratory to learn more about their biological and ecological traits. In addition. they are investigating the susceptibility of these parasites to fly insecticides.

After developing biological profiles on the parasitic wasps, the entomologists hope to be able to use them more effectively on the farms, trying different varieties and release schedules.

Rutz's team is working in conjunction with the federal Livestock Insects Laboratory in Beltsville, Maryland. While the Cornell scientists are focusing on biological control, the USDA lab is looking at manure management and pesticide efficacy. Eventually, the techniques developed by both teams will be integrated to attack the fly problem.

Rutz believes that significant economic benefits,, perhaps as much as $35 million a year, and significant environmental benefit could be realized by using such an integrated pest management approach.

"We hope to be able to provide farmers with viable alternatives to pesticides," Rutz points out. "We don't expect our methods to substitute for pesticides, but we do hope to develop biological control as an integral part of effective fly management programs for use on our dairy farms."

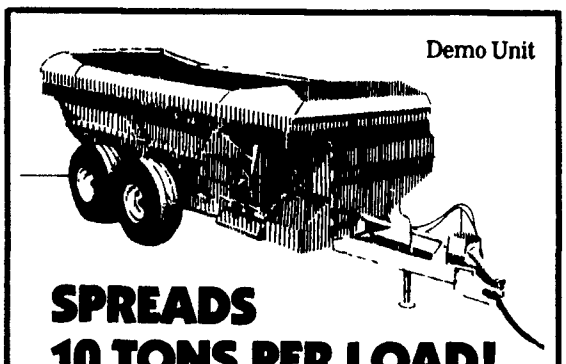
KELLER BROS. OPEN HOUSE
SPECIALS ON SPERRY NEW HOLLAND

Thursday, February 28th & Friday, March 1st 9 AM - 9 PM

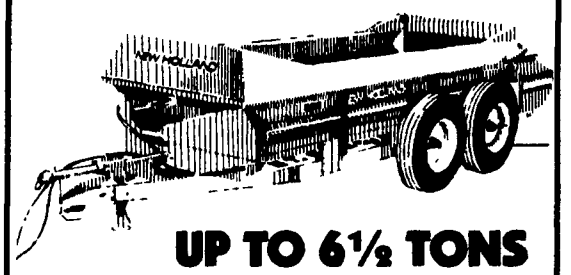
Now is the time to buy. We're giving cash dividends, low financing rates and special clearance allowances. Here's your chance to save big on the equipment you'll need next season at Keller Bros. Tractor Co.

Demo Unit



SPREADS 10 TONS PER LOAD!

The Model 307 is a giant, ten-ton capacity slurry spreader from Sperry New Holland It spreads a fine top dressing of manure – fast! You get an aggressive spring-loaded auger to move material to the front right side for easy, consistent spreading The auger floats over rocks and foreign matter, reducing the chance of damage And, the 307" is backed by our excellent service and parts program See one today!



UP TO 6½ TONS PER TRIP!

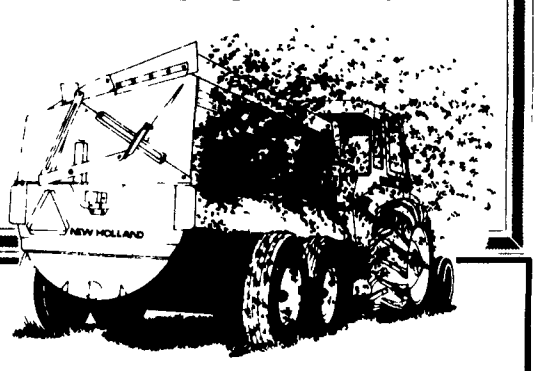
Spread more manure and spread it fast with the Model 680 box spreader from Sperry New Holland Unload up to 6½ tons per trip! Optional slurry side extensions let you handle semi-solid manure, too You'll appreciate the old-fashioned reliability of the 680" And, you get a superior service and parts program to back it up Bonded Protection guarantees the spreader sides for the life of the spreader Stop in and see one today!

Low A.P.R. financing is available on Skid-Steer Loaders

THE BIG-JOB SUPER BOOM!

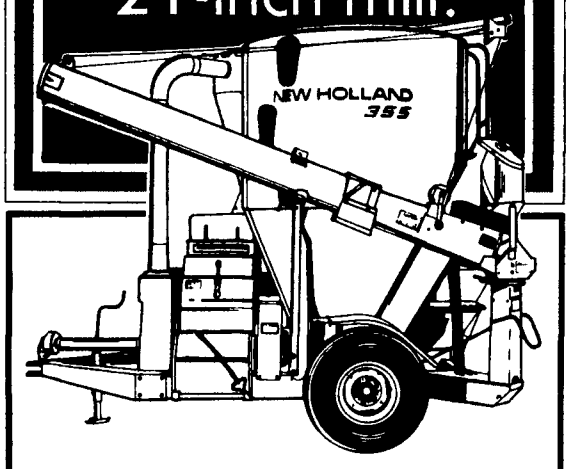
That's what you'll call a Sperry New Holland skid-steer loader after you run one Super Boom lets you load the center of a tandem-axle spreader, handle big round bales, bags of fertilizer or feed, clean stalls and much, much more The unique lift linkage gives you 28 to 34 inches of forward dump reach depending on which of the six models you choose Super Boom also gives you more capacity, more stability and less spillback than conventional loaders Choose gas or Diesel engine from 22-hp to 75-hp Operating loads range from 900 to 2,050 pounds (S A E)

The "clean machine"



Three models are available in capacities from 745 gallons t 1 060 gallons Right or left hand un loadin is available on all three And hydraulic fold back lids are standard equipment You oper ate them from the tractor seat Tanks and lids are made from acid resisting copper bearing steel so they last longer Sturdy A frames carry the load instead of pulling it and rugged flails handle all kinds of manure — even pen packed slabs or fro zen chunks Come in and look at our line of clean machines

100-bushel tank . . . 21-inch mill.



The Sperry New Holland Model 355 grinder mixer features a 21 inch hammermill and a 100 bushel tank Choice of 10 , 13 , 17-, or 20-foot unloading augers lets you reach where you want An optional electronic scale assures accurate control of rations An op tional dual remote control hydraulic unloading auger is also available Ask us to demonstrate on your farm

Direct-seeded alfalfa gains popularity

DEKALB, Ill. – The opportunity for higher alfalfa yields during the seeding year has helped boost direct seeding's popularity, says DeKalb-Pfiser agronomist Greg Jones.

Farmers can establish alfalfa faster with direct seeding than by using a companion or nurse crop, Jones explains. That's because a companion crop competes with the alfalfa for nutrients and moisture and slows plant development. The companion crop must be harvested prior to cutting the alfalfa as well.

"Improvements in the herbicides available to control weeds in alfalfa also have increased the popularity of direct seeding," Jones notes. In the past, companion crops have been used to help suppress week competition and to control soil erosion in seedling stands of alfalfa

Field selection is a vital management step in direct seeding. Since no companion crop is planted to help control soil erosion, Jones advises farmers to direct-seed alfalfa only on level or gently sloping (5 percent or less) fields.

Once a field is selected, a soil test should be taken to determine fertility needs, the agronomist says. The optimum soil pH range for alfalfa is 6.5 - 7.0. If it is below 6.5, lime should be added.

The optimum soil test levels for alfalfa are 50 to 60 pounds per acre of available phosphorus; 350 to 400 pounds per acre of exchangeable potassium; 3 pounds per acre of boron; and 40 pounds per acre of sulfur. Fertilize to bring soils to these levels.

Prior to planting, growers should prepare a firm level seedbed that is free of trash.

Obtaining the desired alfalfa stand means paying close attention to such details as planting depth and seeding rate, Jones notes. "Alfalfa seedlings are small, fragile plants that can't push through the soil if planted too deep," he adds. Recommended planting depths vary from one-fourth to one-half inch on heavier clay soils to a maximum of one inch on sandy soils.

Direct seeding requires a higher seeding rate than alfalfa seeded with a companion crop. At least 15 to 18 pounds per acre is required to reach a first-year stand of 20 to 30 plants per square foot in most areas, Jones says.

High-quality seed should be purchased from a reliable supplier, recommends DeKalb agronomist Bill Arndorfer. "Look at the seed tag to check for acceptable germination levels," he adds. The seed should be inoculated with rhizobia to ensure nitrogen-fixing activity, especially if the alfalfa is being planted in a field that hasn't been in alfalfa for several years, he advises.

Another consideration at planting is the timing. "Farmers should plant as early as possible in the spring," Arndorfer says. If fall seeded, alfalfa should be planted six weeks ahead of the normal date of the first killing frost.

The availability of herbicides for weed control coupled with higher first-year alfalfa yields adds up to success. Direct seeding is an option farmers should consider, Jones concludes.

Chester Dairy Day on Feb. 27

WEST CHESTER – The Chester County Cooperative Extension Service will hold its Annual Dairy Day Program on Feb. 27. The program will be held at the Sadsburyville Fire Hall from 9:00 a.m. to 3:00 p.m.

The educational program will include presentations on farm respiratory hazards, new dairy feeding concepts, and coccidiosis and heifer parasite control. In addition, the program will include a participatory presentation entitled "First On the Scene", which discusses new crucial actions to take when faced with a farm accident. "First on the Scene" is a beneficial program for dairy producers spouses, family members, and other farm personnel.

The day's agenda will also include a farmer panel of Pennsylvania and Maryland producers discussing new feeding systems.

The Sadsburyville Fire Hall is located on old Route 30 between Coatesville and the intersection of Route 10 and Route 30.

For more information, call the Chester County Cooperative Extension Service office at 696-3500.

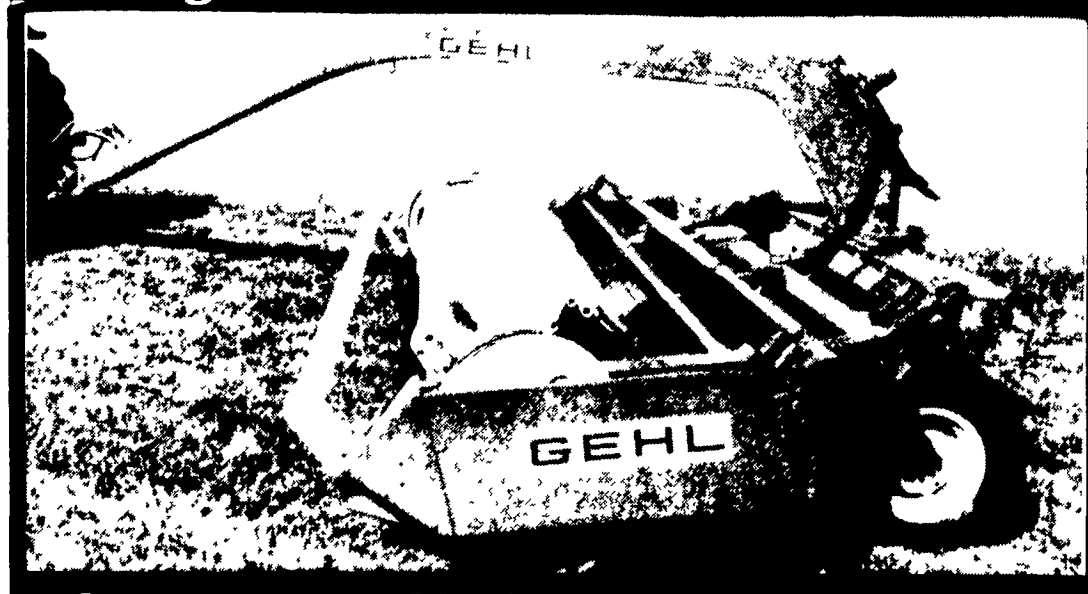
Swing-Frame Mower Conditioners



12' and 14' Cutting Widths

Now you can get into high capacity haymaking with new swing-frame center pivot mower conditioners from Gehl. Our new 2230 has a full 12' cutting width while the 2262 offers a 14' cut **AND** high speed double sickle cutting action for faster cutting and increased capacity.

Both of these new mower conditioners feature totally hydraulic drive with high torque and smooth operation -- no mechanical main drivelines for reduced maintenance and parts.

These new swing-frame units pivot at the center of the frame for positive, easy positioning of the header. You can cut from the left side or right side of the tractor, or tow directly behind for roading. The result to you is reduced cutting time and fuel costs with nearly infinite manueuverability.

Both the 2230 and 2262 feature a 20" auger to feed the crop into the 57" wide conditioning rolls for thorough crop conditioning.

Now you can get into high capacity haymaking at self-propelled speeds and convenience, without the cost of a self-propelled. The **NEW** 2230 and 2262 swing-frame mower conditioners from Gehl.

FCIC to base insurance on actual production history

YORK Pennsylvania farmers will benefit greatly from an innovation in crop insurance now being offered by the Federal Crop Insurance Corporation (FCIC), according to Feggyann Carnill, County Executive Director.

It's called Actual Production History (APH), and I think it's going to make the difference for a lot of farmers in our area," Ms. Carnill said. In a nutshell, APH simply means insurance guarantees will be based on individual yield histories rather than county or area averages as was previously the case," Ms Carnill added.

One thing that also came through loud and clear was the importance of farmers maintaining accurate acreage and production records. With such records the above-average farmer can generally expect to get a higher yield guarantee at a lower price than under the old program, Ms Carnill said. Farmers with no records can still obtain insurance, but must report their acreage and production on an annual basis Yield guarantees in succeeding years will be based on those records to the extent which is appropriate

FCIC recently expanded the APH program to include corn, grain sorghum, tobacco, and peanuts for the 1985 crop year Cotton and rice were included in the program in 1984. All crops will be under APH by crop year 1987

Ms. Carnil learned about the insurance plan during a recent FCIC training conference called to further explain benefits of the APH program to USDA officials and private insurance industry officials who will be responsible for APH training.

Secretary of Agriculture John R. Block recently told a national conference on the APH program in Nashville, Tennessee. Secretary Block said, 'We have turned the crop insurance program into the number-one risk protection device available to all farmers. And it will remain the number-one program to help farmers reduce their risks

By replacing the old county average yield system with a system of actual production history, farmers will at long last receive production guarantees commensurate with their proven ability to produce,' Block said.

Without this very fundamental change, I am convinced that crop insurance would have remained stagnant for years With it, I am confident that the future of the program is very bright.'

Farmers wishing to discuss the APH program and how it can improve their risk management needs, should contact the local ASCS office or crop insurance agent

Small fruit seminar

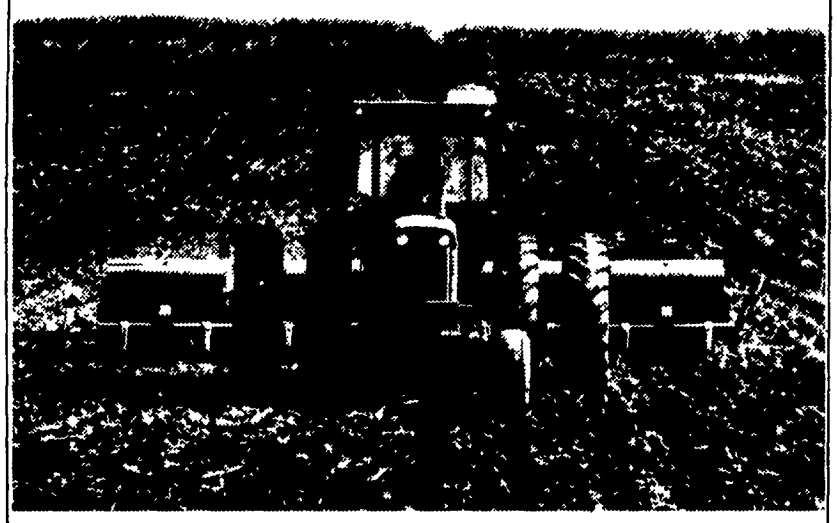
WASHINGTON, Pa. – If you are interested in berry production, you'll want to attend the third annual Regional Small Fruit Production Seminar scheduled for Monday, Mar. 11 at the Holiday Inn, 340 Racetrack Road, Washington, PA (Meadows Racetrack). The meeting will run from 8:30 a.m. until 4 p.m. To reach the Holiday Inn, take Exit 8 off I-79, just north of Washington.

Seminar presenters include three Penn State faculty members: Carl Haeseler, professor of pomology; Don Daum, professor of agricultural engineering extension; and Roland Daniels, associate professor of environmental horticulture. Also on the program are Robert Pollock, Beaver County Extension agent; and Richard Funk from Ohio State.

The speakers will discuss marketing and promotion, bird control, table grapes for this area, and planting systems for brambles, and will offer updates on small fruit research, insects and diseases In addition, a trade show will feature suppliers of machinery, chemicals, irrigation equipment and more.

The Regional Small Fruit Production Seminar has been highly successful in the past, attracting growers from across eastern Pennsylvania, northern West Virginia and eastern Ohio. Don't miss it if you are interested in berry production. For reservations or more information contact the Westmoreland County Extension Service, P.O Box 250, Greensburg, PA 15601, or telephone (412) 837-1402

If the engine quits, two-way radio could pay for itself today.



Lose just one day during the planting season and it could make all the difference between a good crop and a poor one

That's why you should be equipped with a Johnson FM two-way radio

With two-way radio if your engine quits you can simply call for help Chances are a mechanic can get to you and get you going again while there's still some daylight left

But without two-way radio you'd just have to start walking

There are a lot of other ways Johnson FM radio can save you time and money Why not let us show you how you can lease or own a complete two-way system for as little as 75¢ a day

The Milk Check

TOM JURCHAK
County Agent

RCMA

Last month I breifly mentioned the renewed interest in the Regional Cooperative Marketing Agency that had been organized in 1973 to negotiate over-order prices on Class I milk in New England and parts of New York. It worked through 15 months of the next two years, when its legality was challenged in 1975. After lengthy and expensive battles all the way to the U.S. Supreme Court, it's now being organized again for the same purpose.

Originally, the RCMA included eight dairy marketing cooperatives and all of their efforts were in the New England and western New York markets. Similar attempts at the time in the New York City market were not successful, for a number of reasons, and with the increasing milk production of the early 1980's there was less opportunity for over-order prices anywhere in the Northeast markets.

Now after 10 years, RCMA is breathing new life with new by-laws and an organization that is open to all milk producers, including the independent producers. What was started in New England by the co-ops and worked for three years, collecting $22 million in over-order prices for its members, is now spreading through all of New York and into Pennsylvania. Eventually it hopes to include all the federal milk marketing orders in New England, New York and Pennsylvania (except for Order 36 in western Pennsylvania which already has over-order pricing) and all the state orders in the area. It is felt that there is enough inter-order movement of milk that the whole Northeast must be included to make it work. It's also believed that producers will have to sign marketing agreements for 95 per cent of the milk supply in that area to make it work.

What they hope to make work is a negotiated over-order price on Class I milk purchased by every handler in the area that will be collected by the RCMA and redistributed by them back to the producers. The handlers would continue to pay the minimum Order prices to producers as they have in the past and would send only the over-order price on Class I milk to RCMA.

The amount of the over-order price would vary from month to month depending on supply and demand situations in the market. This month in 34 markets over-order prices varied from a low of 12 cents in Philadelphia to a high of $2.03 in Miami. An economic formula has been used in the past by RCMA that includes production costs; Consumer Price Index; the cull cow price and alternative production opportunities, as well as supply-demand factors, but these have to be tempered with a knowledge of the market situation over a wide area.

The trick is to negotiate for the highest possible price without opening the door for milk supplies from other areas. That's why the over-order price is set only on Class I milk, because the supply is usually associated with one major market. Class II milk has to compete with manufacturing uses and markets over a much wider area and is really a part of a national market. It would take a nationwide effort to accomplish that. Even on Class I milk there may be some months that there would be no over-order price.

The key to success is the control over the supply that the organization must have to negotiate for higher prices. Whatever the higher price is, it will be the same for all handlers in the market so each handler remains competitive with other handlers. The producer agreements are effective only until January 1st of the year after the agreement is signed and can be terminated before then with 90 days notice.

The independent members of RCMA will be organized into geographic regions with one delegate and an alternate for every 300 members. Co-ops would also organize by regions and each region (co-op and independent) would elect a director to the board so there would be equal representation from co-op and nonco-op members and each member would have a vote. There is also an opportunity for protionate voting if requested by 10 percent of the delegates. In that case it would be one vote for every 100 million pounds of milk.

Much of the farm press has already circulated information on RCMA. Details are available — including copies of the member agreements and the by-laws — by writing to: Regional Cooperative Marketing Agency, 831 James Street, Syracuse, N.Y. 13203.

Marketing Situation

While supply control is critical to over-order pricing, the supply-demand situation in the market is just as important. That's why over-pricing, did not have a chance in many markets in the last four years. Now, however, the marketing situation has made a dramatic turnaround in the last half of the 1984 and the opportunity is here evens for the Northeast.

Here in Order 2 we went from the lowest prices in 40 months last spring when the blend price was 49 cents below the year before, to record highs in the fall, to ending the year with a blend price 31 cents higher than 1983. The Market Administrator felt it necessary to issue a 10 percent call order for Class I milk in December and there will be another for seven percent in February.

All of this, while the support price remained unchanged at $12.60, was accomplished by a four percent drop in supplies to bring them more in line with demand. You had some help from the Milk Diversion Program, but I don't believe it was as much as it gets credit for. However, you had to pay for the adjustment through a 50 cent assessment to pay for the diversion, so financially you're not better off now than a year ago.

However, you did make the change in the marketing situation and it's continuing into 1985 with a blend price in January of $13.34 which is 35 cents better than last January and the highest monthly increase over the previous year since September 1981. But you're still paying the 50 cent assessment and the best way to recover that or make up for the support price cuts you face in April and July is through RCMA and over-order pricing.

The need and the opportunity are here, but the initiative to act is up to you. It will be interesting to see if you will even try in what is really a voluntary, self-help program.

Chester DHIA workshops

WEST CHESTER — Two DHIA records workshops will be held in Chester County during February. The first evening workshop will be held on Feb. 26 at 7:30 p.m., at the Owen J. Roberts High School in the Vo-Ag classroom. The meeting will include presentations by Dr. Larry Specht, Penn State Dairy Extension Specialist, and John Kline, Regional DHIA Field Representative. The Owen J. Roberts High School is located at the intersection of Route 100 and Route 23 in Bucktown.

The second evening workshop will be held on Feb. 28 at 7:30 p.m., at the Oxford Area High School in the Vo-Ag classroom. This meeting will include presentations by John Kline, and David Swartz, Chester County Dairy Agent. The Oxford Area High School is located on 5th Street in Oxford.

Both meetings will include question and answer periods. Farmers are urged to bring their own records to the meeting for reference. Refreshments will be provided by Southeast PA Farm Credit Service.

The DHIA workshops are sponsored by the Chester County Cooperative Extension Service.

Researchers attain record crop yield

ATLANTA, Ga. — As recently as five years ago, talk of 300 bushel per acre corn yields, 100 bushel per acre soybeans, and 150 bushel per acre wheat met with some doubt in much of the agricultural community.

However, a forward-looking concept known as maximum yield research (MYR) has begun to show that higher yields are not only attainable, but they also provide needed information to determine maximum economic yields for the farmer.

For example, Dr. Roy Flannery of New Jersey harvested 309 bu/A corn and 103 bu/A soybeans from his 1984 research plots. His five-year average yields from the maximum yield study are 307 bu/A for corn and 104 bu/A for soybeans

In Ontario, Canada, researcher Ken Stevenson of Ridgetown College of Agricultural Technology recorded a 1984 corn yield of 257 bu/A, the highest corn yield ever in Canadian research. His average of 244 bu/A for non-irrigated corn over the past three years is considered the highest such average from research in North America.

Wheat yields over 100 bu/A are becoming commonplace in research. In 15 maximum yield experiments - some for as long as four years - yields have been reported 42 times. Twenty-five of those have been over 100 bu/A.

The highest yield of wheat reported in the West was 182 bu/A in Oregon and in the East 140 bu/A from Virginia. Yields of 118 bu/A were reported from Texas and 100 bu/A from Wyoming, both under irrigation. Dryland yields of 94 bu/A were reported in Kansas and 63 bu/A from North Dakota.

"As these high-yield systems are refined and adapted for use on farms, the goal will be maximum economic yields for the growers," explains Dr. Charles P. Ellington, Vice President and Director of the Foundation for Agronomic Research "After researchers determine yields that are attainable for various conditions, producers will have more information available to guide them toward higher profits."

FAR research grants, made possible by industry contributions, have encouraged many researchers to try new approaches. FAR is now contributing to 65 research projects in the U.S., Canada, China, and other countries.

The increased emphasis on MYR coincided with the establishment of the Foundation for Agronomic Research (FAR) in 1980. The Foundation is affiliated with the Potash & Phosphate Institute (PPI) and draws support from diverse agricultural industries to help support multidisciplinary research.

National farm co-op leader calls for competitive ag

WASHINGTON, D.C. – A farmer cooperative leader recently called for a U.S. agricultural growth policy that will permit our farmers to survive and prosper. He stated the U.S. must act to counter the adverse effects of the over-valued dollar and unfair foreign trade practices so that our farmers' competitive edge can work.

The remarks were made in a hearing on U.S. agricultural competitiveness by Richard E. Bell, president, Riceland Foods, and chairman of the agricultural and trade policy committee of the National Council of Farmer Cooperatives.

Testifying before the Senate Subcommittee on Foreign Agricultural Policy, Bell said that the sharp rise in the value of the dollar increases the cost of U.S. farm products to foreign buyers in terms of their currencies, even when the U.S. price declines.

"If the government is going to saddle farmers with these adverse macroeconomics conditions, then the government has a responsibility to help farmers overcome their adverse effects," Bell said. Beyond that, he noted, trade is distorted by unfair foreign trading practices.

"Our farmers are willing to compete in world markets with anyone, as long as the competition is fair," Bell declared. "Today the competition is unfair," he added. "Trade barriers in other countries, foreign export sibsidies, and state trading companies all distort world trade."

"It is unfair to ask our farmers to compete without help against the treasuries of foreign countries," Bell said. "Actions are needed to encourage a growth-oriented policy based on fair trade."

Call To Action

Bell then cited a four-point plan to address both the short and long-term needs of a competitive agriculture:

1) Implement monetary and fiscal policies to improve macroeconomic conditions in order to reduce interest rates and bring the over-valued dollar into better balance with foreign currencies.

2) Offer farmers non-recourse USDA "marketing loans" on their commodities which would be repaid based on the loan rate or the market price for the commodity, whichever is less. This would allow farmers the assurance of the original loan value, but avoid market interference by allowing loans to be repaid at market prices for the commodity. Commodities redeemed at market price levels could be resold by farmers at competitive world price levels, rather than held in government storage at taxpayer expense.

3) Establish an agressive Trade Title in the 1985 Farm Bill. It would include export credit programs tailored to fit the diverse needs of recipient countries, and would be designed to move those nations from "aid" to "trade" in their relationship with the U.S. New programs would include a continuous line of credit guarantees and an intermediate credit guarantee program. The P.L. 480 program should be extended and improved, with emphasis on multi-year programming and infrastructure development in recipient countries. And, an export PIK program should be authorized and implemented.

4) Work to reduce upward pressures on farmers' cost of production through reduced government regulation and improved agricultural research. Focus should be on improved technology which can reduce farmers' production costs.

Bell said that our U.S. competitive position will determine whether agriculture as a sector can expand and capture export markets, or be forced to retrench.

The Dairy Business

By Newton Bair

COWS CAN'T READ

No, cows can't read, but they sure can respond to the way you read and interpret that print. Let me explain. Much of our planning in the dairy business is done on paper. We get expert feed recommendations from our feed salesmen or from Penn State, and it's on paper. Perfectly formulated, using our forage test reports. But it is a long way between the paper and the feed trough, with many a chance for a slip in between.

The monthly DHIA report is a sheaf of papers for your use that are chock-full of information about your herd. You understand very well that it's up to you to read it, since the stupid cows can't. So you do look at it, and if you're the kind of dairyman I think you are, you do more than just read it. If all you do is read the report, you might just as well show it to the cows, even if they—,you know what I mean?

What I'm driving at is, there is a lot of information floating around that somebody has to read, digest, and most of all, act upon. The key word here is ACT. Because all of the best advice and information on feeding, breeding, housing, and herd management is so much chaff unless it is used. Not just theorized and verbalized and dreamed about, but put into ACTION.

That feed plan, for instance. How careful are you in actually putting together the Total Mixed Ration? Do you have the means of correctly weighing and measuring the prescribed ingredients? Are they properly mixed or distributed so that each cow gets her share? Are you omitting some 'little' thing like salt, vitamins or minerals? Are you compensating for the change in moisture of the silage? Is there enough of the TMR for everybody, so none are hungry? Of course, it's all there on the paper, so it must be right, right? Not necessarily so.

CHANCES FOR ERROR

One of the most common reasons for any herd not responding to an otherwise good feed program is that the cows are not getting what has been prescribed. There are three chances for error in the process. The first one has to do with the quantity and quality of the feed stuff used in the ration. The second has to do with putting the ingredients together in the right proportions. The third is making sure that every cow is actually getting her share, and actually eating it.

There are ways of substituting feeds that have approximately equal nutritional value. And sometimes price is worthy consideration in choosing feed supplements. But a finely tuned dairy ration must be carefully analyzed before it is mixed and offered to the herd. That is where your feed supplier, advisor, or Penn State recommendation start, on paper. That is only the first step.

Putting those recommendations together in the feed bunk is just as important as the paper part. Make sure that you, or whoever does it, understands the importance of accuracy in this step. Sloppy feeding not only ruins a good feed program, but can be the best way to waste feed and money. Any extra pains taken to measure ingredients correctly will be well repaid.

The actual amounts eaten by any individual cow are pretty hard to measure. But since TMR is formulated on a group basis, averages are acceptable. Sometimes there is feed left over, not eaten. This should be weighed occasionally, and deducted from the total feed to calculate the amount actually eaten. If the average amount of feed actually eaten is less than that prescribed on paper for your herd, you'd better take another look at the ration. There may be a palatability problem, or an error in the formulation. Look carefully at this end of the feeding operation, it can be full of surprises.

To paraphrase a proverb "there's many a slip twixt the paper and lip" (of the cow, that is). The way a cow responds to your fed program depends entirely on how conscientious you are in reading, inerpreting, formulating, and finally observing and evaluating what you see on the paper,versus what the cow actually eats. And, of course, how well she responds to it.

Gordonville Fire Co. auction

GORDONVILLE — The Gordonville Fire Company & Ambulance Association will hold its 17th Annual Spring Consignment Auction, Saturday, March 9.

Items to be sold include approximately 250 handmade new quilts; antiques and collectibles; new and used farm machinery, furniture; a truckload of fresh citrus fruits; horses; mules; cattle; hay; straw; truckloads of new and used tools; dry goods; trailer loads of paneling, windows, doors and building supplies; new and used household goods; plus something for everyone.

The auction starts at 8:30 a.m under 4 large tents rain or shine, and continues throuthout the day, with as many as 20 auctioneers selling at the same time in different areas. Usually between 30 and 35 auctioneers donate their services for one of the largest Fire Company Auctions held in Eastern U S

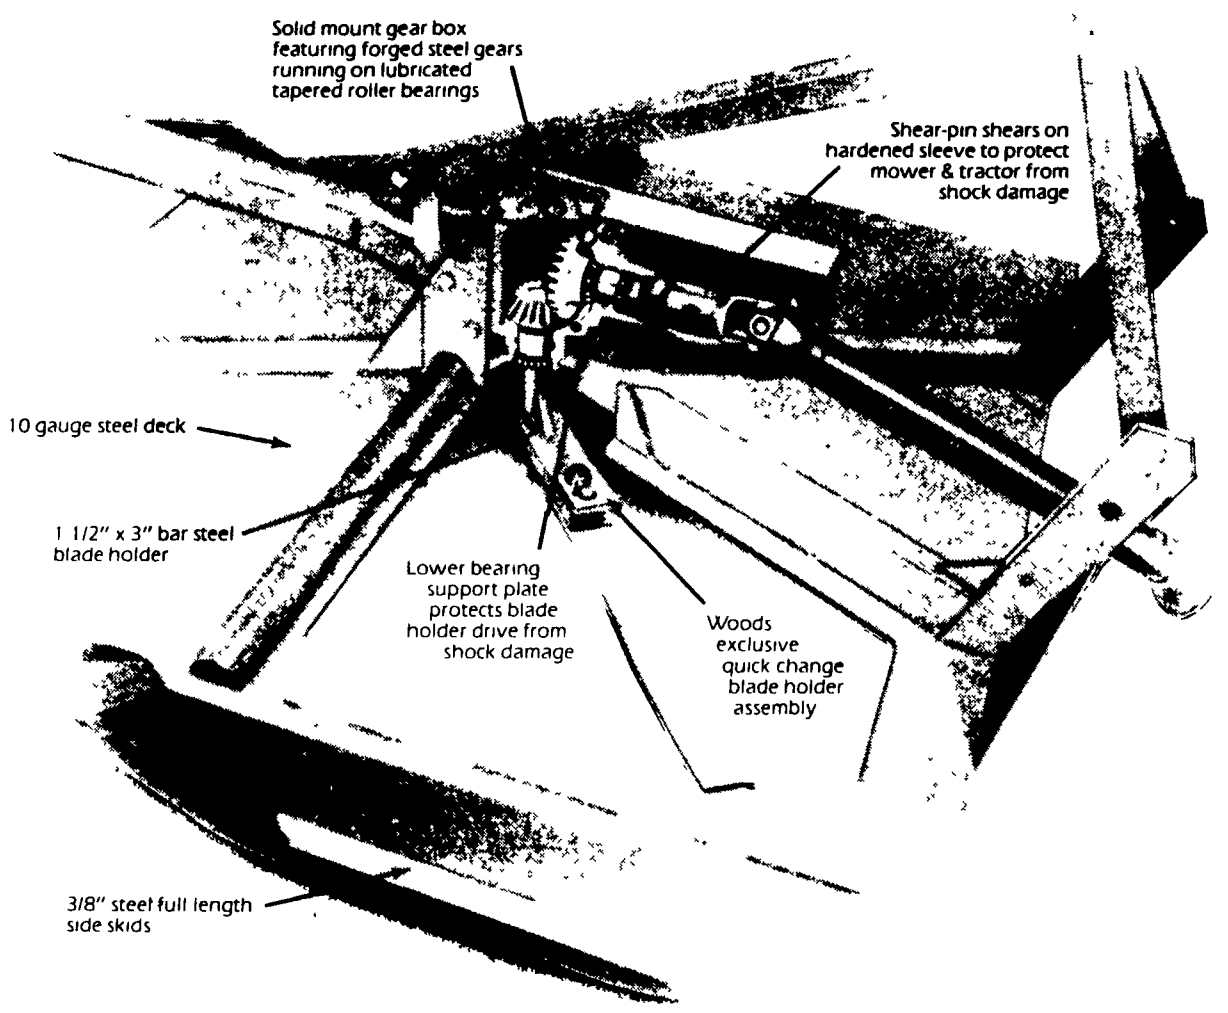
WOODS' M5 DIXIE CUTTER

Worth More In The Long Run



Solid mount gear box featuring forged steel gears running on lubricated tapered roller bearings
Shear-pin shears on hardened sleeve to protect mower & tractor from shock damage
10 gauge steel deck
1 1/2" x 3" bar steel blade holder
Lower bearing support plate protects blade holder drive from shock damage
Woods exclusive quick change blade holder assembly
3/8" steel full length side skids

Woods' M5 Dixie Cutter cuts and shreds a five foot swath. It has a direct geat drive with a heavy-duty gear box and is available in models for rear-mounting on 3-point hitch, fast-hitch or AC snap-coupler.

Sure, you'll have to pay more for a Woods' M5 rotary cutter. That's because you're getting more. More features. More safety. More years of reliable service. Dependability. That's what makes Woods products worth more.

Woods' Dixie Cutter is one of several mowers from an expanding line of high-quality equipment available at a fair price.

Get to know Woods. We've been around for 37 years. And during that time we've been keeping promises and making products that offer outstanding performance.

See your Woods' dealer for a demonstration soon, and discover for yourself why we say Woods' mowers are worth more in the long run.

Thornburgh budget includes key farm measures

HARRISBURG - Gov. Dick Thornburgh's 1985-86 budget proposal supports the revitalization of the state's farm and rural community, according to state Agriculture Secretary Penrose Hallowell.

'Pennsylvania is working again, and our agricultural industries should continue in the economic forefront," he said. 'The Department's budget provides an increase of 5.8 percent in general government operations, which will allow us to expand services to the agricultural community. The budget also provides funding for expansion of direct farm marketing into major consumer markets."

Included in the Department's 5.8 percent increase are three productivity improvement initiatives which are receiving one-time funding to support long-term cost savings and efficiency benefits:

- $140,000 to provide for computerization to improve analysis of agricultural product samples and use of robotics to replace manual operations in the Foods and Chemistry laboratory.
- $38,000 to provide for computerization of submissions, tests and test results at the Summerdale Laboratory to eliminate errors and expedite processing.
- $40,000 to allow the purchase of electronic scales for use in test weighing packaged products offered for sale in food and retail stores.

Major initiatives in the governor's budget request for the Department include $100,000 for an Agricultural Development Commission and $200,000 for Farm Market Promotion.

The governor requested funding last year for the Agricultural Development Commission, as an incentive to establish a program to attract and expand agricultural businesses and promote sales of Pennsylvania food and agricultural products, the Secretary said. Although legislation to create the Commission failed to win approval in the General Assembly, we are confident that such a program would promote further growth for farmers and agricultural businesses alike.

Hallowell noted that the other states have begun new programs to promote their agricultural industries, and that an Agricultural Development Commission would help Pennsylvania compete in the marketplace through private-public initiatives.

The proposed Department budget also includes a $200,000 to expand the Farm Market Promotion program to inner-city areas,' he said. Pennsylvania farmers have already used more than $1 million in loans from the Farm Market Loan Program to expand direct marketing ventures. These new funds will help generate a major investment in community and farmer-owned markets, creating job opportunities and increasing the availability of Pennsylvania foods to inner city residents.

Several cities have been exploring the feasibility of these farm/community markets, and funding for this program will act as a catalyst in drawing other public funds and private investment, 'he said.

Funding for ongoing Department programs is maintained or expanded in the governor's budget request, with the exception of major items included in 1984-85 on a one-time basis to assist the poultry industry in recovering from the economic crisis of avian influenza.

For the second year, the Pennsylvania Fair Fund is supported by revenues from the General Fund, providing $2.5 million in reimbursements to the state's fairs, supporting agricultural research and marketing programs.

The governor's budget request also maintains levels of funding for agricultural research, agricultural promotions, and operations of agriculture related events held at the Farm Show Complex. Funding through the State Farm Products Show Fund will increase slightly.

Additional funding is requested in the state's capital budget to improve the heating system in the Farm Show Complex large arena, and to replace the lighting system in the arena with a brighter, more energy-efficient system. Construction funds are also being sought for a storage-shop building adjacent to the Agriculture Building for equipment, supplies and exhibit shop.

Hallowell said an additional $13 million is targeted to environmental programs, including $1.1 million in state funds to assist in the effort to reduce erosion and save the Chesapeake Bay.

Berks gypsy moth spraying halted

It appears the Gypsy Moth problem in Berks County is under control for the time being. The Bureau of Forestry has notified the County Coordinator that none of the 63 blocks submitted for spraying in May of 1985 can qualify. The number of viable egg masses cannot meet the minimum requirements.

Last October the Berks County proposal of 3,874 acres in 63 spray blocks was forwarded to the Bureau of Forestry. They have inspected all these blocks in ten different townships and two boroughs and find they do not meet the spray guidelines.

In May 1984 almost 11,000 acres in 157 spray blocks were approved and sprayed in Berks County.

Service Forester, Jeffrey Stuffle, said the situation in Berks is typical of what is being found in other areas of Eastern Pennsylvania. He notes that only about 3,500 acres will be sprayed in the entire area east of the Susquehanna River.

Brockett's Ag Advice

By John E. Brockett
Farm Management Agent
Lewistown Extension Office

Daily logs for cars used for business and pleasure must have hit a raw nerve on a lot of people. The IRS has pulled in its horns on this and is easing the rules in most cases. It is all but dead for full time farmers. See-sometimes letters to your Congressmen do help.

At any rate, if 70% of your income (not counting interest and dividends) is from farming, you can forget about the logs. It appears that incidental use of business vehicles by employees will also be acceptable.

There is some sentiment in Congress to repeal the whole "log keeping" rule. The IRS is hoping that easing these rules will cause the Congress to do its usual thing and let the rule stay on the books.

The only real safe way to eliminate the rule is to continue writing Congress and asking for repeal. Otherwise it will crop up again in the future to haunt us.

While you are writing to your Congressman to repeal this law, what about taking a whack at two others that are equally burdensome:

The minimum interest rate on money lent by one individual to another. Why should we have to charge anyone a certain minimum rate regardless of the amount we lend? Especially if this rate is higher than we can get on regular bank type savings. To be fair-this rule was eased back in October so that, for all practical purposes, up to $10,000 can be lent at any interest rate acceptable to both parties. Also up to $100,000 can be lent under the same conditions if it was for a business purpose and not to avoid taxes.

The law that requires you to pay the tax on depreciation recapture in the year of the sale regardless of when you receive the money. It may cause a person to pay more taxes than the person receives in payment for the year. So why sell something on an installment sale where you have to charge a minimum of 9% interest? Why not set up one or more loans of less than $100,000 or less on which you can charge any interest desired? The law doesn't make good sense and will cause people to search for and find ways to get around it. It will be very difficult to enforce and will be one more divisive element between people and the IRS.

When a new law or rule affects you, don't just stand around and complain, send a letter expressing your sentiments to your Congressman. From the replies I get when I do it, I have to wonder if my letters get read, but often times later action indicates that they at least get tabulated. Occasionally they even get read.

The best letters by the way are short and concise. The "I object to..." with a brief explanation written or typed by you, will carry more weight than a long rambling letter or a form letter.

To get on your Congressman's good side you may want to occasionally write a "good for you" letter. However, your vote is even more meaningful.

'84 wheat crop is largest ever

WASHINGTON — The nation's 1984 wheat crop totaled 2.60 billion bushels, the third largest on record and 7 percent over 1983's production, according to USDA's December crop production report. The 66.9 million acre harvest is 9 percent above the previous year's level.

Last year's generally favorable weather conditions produced above-average wheat yields of 38.8 bushels per acre, only six tenths of a bushel under the all time-high 39.4 bushels an acre established in 1983.

Wheat growers in PA contributed 8,360,000 bushels to the 1984 wheat crop. To produce the crop, PA farmers harvested 220,000 acres of wheat, averaging 38 bushels an acre. In 1983, farmers harvested 200,000 wheat acres and produced a 7,600,000 bushel crop. Wheat yields averaged 38 bushels per acre. Price support loans will be available on 1984 wheat until March 31st.

The large crop put wheat supplies at a record high, according to USDA, just under 4 billion bushels. However, forecasts for a rise in wheat exports and continued heavy domestic use of wheat will likely result in ending wheat stocks remaining relatively unchanged. Because current supplies are large relative to use, wheat growers may want to consider the wheat acreage reduction program to help reduce carryover stocks to reasonable levels and strengthen farm prices.

For reducing 1985 wheat acreage by 30 percent, wheat growers have been offered target price protection at $4.38 per bushel, national average price support loans at $3.30 per bushel, and land diversion payments at $2.70 per bushel.

Farmers have until March 1st to apply for the 1985 wheat acreage reduction and land diversion program.

Participation in programs administered by ASCS is open to all eligible persons without regard to race, color, age, sex, religion, national origin or handicap.

Farm Talk

by

Jerry Webb

A phenomena has occurred in rural Iowa that has overwhelming implications for all U.S. agriculture. It has to do with farmland values. In a nutshell, here's the situation. Iowa farmland values declined 20 percent last year That's the third consecutive yearly decline and a 37 percent drop from the 1981 peak.

We're a long way from Iowa, but believe me what's happening there now is having implications for Eastern farmers. The proverbial bubble has broken. The bubble that floated upwards through the 70s allowing farmers to borrow money for expansion, operating costs and to pay off old loans has in fact let them down. And that's not happening just in Iowa, it's happening all over.

An Iowa farm that was valued at one million dollars in 1981 is now valued at only 630 thousand dollars and who knows what it will be worth next year.

Consider the poor lender who was willing to loan 800 thousand dollars on that property three years ago. No doubt the farmer still owes most of the principal and so the banker is setting there with an 800 thousand dollar loan on a 630 thousand dollar farm. He's afraid to foreclose and he's afraid not to. It's a very awkward position.

The Iowa information is based on a survey of 570 real estate brokers. They were asked to identify the main factors contributing to the land market bust.

Two-thirds blamed high interest rates as the major factor in declining land values. About half said low commodity prices were a problem and about one-fifth cited pessimism and a depressed economy while another one-fifth blamed financing and cash flow problems.

But regardless of how real estate brokers felt about the cause of declining land values; to the farmers involved it means lost assets.

In a real sense if you're not buying or selling land what difference does it make? It makes a lot of difference. Because land is just like money in the bank. You can borrow on it to get operating capitol, to buy more land and machinery, build a hog house or do whatever else seems worthwhile from a business point of view. But what banker wants to stick his neck out to loan a few more thousand to a farmer whose land is decreasing in value every day.

No one is sure if the land bust is finally over in Iowa. Some of the real estate brokers say its depreciated to a point where it will not "cash flow". That means it's cheap enough that a farmer could buy land and pay for it from the crops produced.

Wow! Can you imagine that? Actually being able to buy a farm and pay for it with farm production. That hasn't happened in a long time not even in rural Iowa. And especially not here in the East where land that can produce no more than 80 bushel corn year in and year out, sells at several times its ability to "cash flow".

The land boom of the past has been good and bad. It allowed a lot of farmers who owned their land to borrow heavily, buy more land, bring sons and daughters into the farm business and move up the economic ladder of success.

It also encouraged a lot of off farm money to be invested. It encouraged lawyers and doctors to buy farmland, bidding up the price out of the reach of operating farmers. It also allowed some farmers to get in over their heads, to borrow beyond their ability to repay. To get into enterprises and management problems, they were unable to handle.

Land inflation has been happening for decades, but really skyrocketed in the 70s. And it's a big part of the financial havoc that is going on throughout rural America these days. Farmers who were born and raised on small to medium sized diversified farms of no great value suddenly found themselves millionaires on paper.

Those with little or no debt could borrow unheard of sums of money. And even if they weren't able to pay even the interest at the end of the cropping year the land would appreciate more than the interest due and so they could refinance and stay out of trouble.

Some farmers got caught up in this and played it for all it was worth. They took a 280 acre home farm and parlayed it into a two-thousand acre spread. They built hog houses, bought new combines, filled their shops and machinery sheds with all the equipment and gadgets the market could supply.

And then things started to go sour. Interest rates got out of hand. Commodity prices dropped. There were some dry seasons and then land values turned down. All of that going bad at the same time was more than a lot of farmers could stand.

What will it take to turn it all around again? A miracle or a lot of time. Farming won't return to those days of the 1970's for some time. Commodity prices aren't going to sky rocket anytime soon. And most people, farmers and investors aren't anxious to commit themselves to more land even if the price is considerably less than it was only three years ago

Iowa State University economist Bob Jolly says land values may be approaching levels that are economically justifiable, given current interest rates and rates of return. He thinks they might just stabilize at that point. He lists three important considerations:

"First, land income stabilized at eight to ten percent, approximates current land values.

"Second, land will again cash flow, service debt out of earnings with a modest down payment.

"Third, current land values are near a long-term trend line established through the 1950s and 60s. In other words, if the increases in land values experienced in the 1950s and 1960s had been maintained, land values would be near current levels."

Jolly goes on to say that the land boom of the 1970s was a bubble created by optimistic expectations and easy credit.

An interesting historical perspective is offered by the Iowa surveys that have been conducted since 1942. Land value more than doubled during the 1940s-from $88 an acre in 1940 to $218 in 1950. It took more than 2 decades for land values to double again, with values still at only $430 an acre in the 1971 survey. But then they increased five fold from 1970 to 1981.

Land values here in the East won't experience such a dramatic decline. But you can bet farm lenders are well aware of the farm real estate situation. Their willingness to lend is going to be tempered not only by local conditions but by the hard facts of the Iowa survey and other agricultural land market observations.

I'm reminded of a farmer who said he never really took serious the land boom of the 70s because he had no intention of selling his land or buying additional land. And so at the end of each year when he sat down to figure out whether he was moving forward or backwards he discounted the land value as though the boom were not occurring. That way he knew whether his efforts as a farmer were paying off. Right now, that seems like exceptional wisdom.

Our new "300" timber column!

.6 pound of penta

Morton Buildings' new laminated column is treated to a .6 pound per cubic foot retention of pentachlorophenol preservative. This new treatment meets the federal government specification (USDA Form W 00571J) for the proper treatment of timber columns buried below ground.

100% sapwood penetration

The No. 1 Southern Yellow Pine components of the laminated column are kiln dried before treating to remove much of the water content, assuring 100% penetration of the sapwood.

To guarantee the new requirements are met, an independent inspection service regularly visits the treatment plants. All lumber not conforming to our specification is rejected or re-treated.

Morton Buildings demonstrates its confidence in these improvements by now offering a 50-year warranty on the timber column. Our warranty also includes 5 years against paint checking or peeling; 5 years against paint fade and chalk; 5 years against red rust caused by acid rain; 5 years against roof leaks; and 5 years against damage due to snow and wind loads. That's confidence!!

Equipment manufacturers see sales increase in '85

LAGUNA NIGUEL, Ca. — Farm equipment manufacturers predict a modest increase in dollar sales volume for 1985, according to the results of a survey released today.

The survey of its members was taken by FIEI in late December and the results were reported by David D. Koentopf, president and CEO, Steiger Tractor Company, at the annual winter session of the FIEI Marketing and Management Conference. Manufacturers look to reduced interest rates and pent-up demand to reverse the overall decline in equipment sales of the past five years.

"Such reversals will be moderate and not easily accomplished," Mr. Koentopf pointed out. "The year ahead will certainly be one of new and exciting challenges but problems can be solved with proper management, leadership, cooperation and the willingness to consider new ideas."

The farm equipment market saw its fifth straight year of general decline in 1984, due mostly to the continuing financial stress suffered by many farmers. Lower interest rates and the increasing need to replace worn out equipment lead FIEI members to anticipate a sales recovery for nearly all classes of tractors and equipment.

All percentage changes noted in the report are for units not dollars.

Sales are anticipated to be the strongest in grain harvesting equipment, medium sized tractors (40 to 100 hp) and crop dryers, as grain stocks increase and profitability improves for livestock producers.

All horsepower classes of two-wheel drive tractors are expected to increase modestly in 1985 and again in 1986. The largest increase for 1985 of 2.9 percent is anticipated for the 40 to 100 hp class. Sales of four-wheel drive tractors is not expected to fare so well in 1985 with sales seen falling by 5.0 percent. A rebound in 4-wheel drive sales is expected, however, with a robust 10.5 percent increase in 1986. Lower interest rates and pent-up demand for new equipment were reasons given for the expected increases.

GRAIN HARVESTING EQUIPMENT

Self-propelled combine sales are expected to reach 12,000 units in 1986 which is a 3.0 percent increase from the 1985 levels of 11,650 units. Members are calling for a 4.5 percent sales increase in 1985 after seeing sales volume decrease since 1981.

TILLAGE EQUIPMENT

Sales increases are forecasted by the members for chisel plows and field cultivators. Field cultivator sales are seen to increase 5.0 percent in both 1985 and in 1986. The members are calling for a 4.0 percent sales increase in chisel plows for 1985 followed by a 5.0 percent increase in 1986.

HAY AND FORAGE EQUIPMENT

Mower conditioner sales are also expected to increase for both years. A modest 1.6 percent sales increase is being called for in 1985 and a 6.9 percent increase in 1986. Forage harvester sales are expected to fall by 7.5 percent in 1985 to 3,100 units followed by a gain of 6.5 percent in 1986.

Sales for balers producing bales under 200 pounds will see a slight decline of 0.3 percent to 8,200 units for 1985 followed by no change in 1986. Members are expecting balers producing bales over 200 pounds to fare better with a 2.0 percent increase in 1985 and a 3.5 percent increase in 1986.

Members pointed to increase livestock profitability as a reason for expecting improved sales in 1985.

CROP DRYERS

Members gave an optimistic forecast for both in-bin and batch/continuous flow crop dryers. In-bin crop dryers are seen to increase 4.0 percent in 1985 and 5.0 percent in 1986. Batch and continuous flow dryers were seen with more optimism at a 9.0 percent increase in 1985 and a 7.0 percent increase in 1986.

AUGERS, ELEVATORS, AND GRAIN BINS

Portable auger and elevator sales are expected to rise 5.0 percent in both 1985 and in 1986. Members forsee a 5.0 percent increase in grain bin sales in 1985 and an optimistic 9.0 percent increase in 1986. Additional crop volume and higher carryovers are reasons given for this anticipated sales improvement.

MILKING MACHINES

The possibility of reduced government support programs for dairy producers caused members to expect a 5.0 percent reduction in milking machine sales in 1985. Sales are seen to stabilize in 1986 with no change.

FARMSTEAD MECHANIZATION EQUIPMENT

Sales are seen remaining flat in 1985 for dairy and beef mechanization equipment. Sales forecasts 1986 are more optimistic as improved livestock profitability causes sales to increase by 4.0 percent.

Farmer-owned oat reserve in release status thru Feb. 28

WASHINGTON – Oats in the farmer-owned grain reserve will remain in release status through Feb. 28, according to Everett Rank, executive vice president of the U.S. Department of Agriculture's Commodity Credit Corporation.

Rank said CCC officials made the decision on the reserve oats following their review of CCC's average market prices Feb. 1, as reported by USDA's Agricultural Marketing Service, adjusted to reflect the market price received by farmers.

On Feb. 1, the adjusted price for oats was $1.69 per bushel, 4 cents above the release level of $1.65 for reserve oats.

Effective Jan. 1, storage payments stopped and interest began to accrue for oats in the reserve for more than one year.

Last week, the USDA allowed feed grain producers with maturing 1984-crop barley, corn and sorghum regular loans to place their crops in the farmer-owned reserve.

"Producers with 1984-crop oat regular loans may place their crops in the reserve if the oat reserve is not in release status when the regular loan matures," Secretary of Agriculture John R. Block said.

The oat reserve is currently in release status. Current provisions-a storage rate of $.265 per bushel for corn and barley, $.20 per bushel for oats and $.4732 per hundredweight for sorghum and no reserve minimum–will apply.

USDA had said it would review the size of the reserve before the regular 1984-crop loans matured.

"Because some barley and oat loans will begin to mature on February 28, an announcement on reserve availability must be made now," Block said. "With this action, it is not likely that the feed grain reserves will reach 1 billion bushels before 1984 regular loans begin to mature." Block said.

Farmers will not be permitted to convert existing and maturing feed grain reserve loans into the current reserve. The trigger release level will be $3.25 per bushel for corn, $2.65 per bushel for barley, $1.65 per bushel for oats and $5.54 per hundredweight for sorghum. Interest is charged on reserve loans during the first year in the reserve. No interest is charged after the first year, except during certain release periods.

Producers should contact their county Agricultural Stabilization and Conservation offices for further details.

Governor's product awards

HARRISBURG – State Agriculture Secretary Penrose Hallowell today urged state agribusinesses which have developed a new product or process that created jobs and benefits to enter the third annual "Governor's New Product Awards" competition. Applications will be accepted until June 1.

The program was established in 1938 in conjunction with the Pennsylvania Society of Professional Engineers (PSPE) to reward the innovations of Pennsylvania firms which have helped to "diversify our economy and modernize our traditional industrial base," according to state Commerce Secretary James O. Pickard.

Every year, one award each is made to a small, medium and large state business which has created and marketed a new product or technology.

"The state's agribusiness community has a tradition of new product development that has helped make agribusiness the state's number one industry, employing more than 1.1 million Pennsylvanians," Hallowell said. "I urge any agribusiness firm now seeing results from recent developments in product or technology to apply for this prestigious honor."

Hallowell said that the economic contribution of the new technology is the most important factor in determining award winners, in keeping with the Thornburgh Administration's priority to promote job-creating opportunities for Pennsylvanians. Five judges named by the governor and PSPE also evaluate entries on innovative use of engineering principles, improved function or savings as well as product appearance, packaging, safety and marketing.

Entires must have been on the market for at least one year and not more than five years before the judging.

Applications may be obtained from the Pennsylvania Society of Professional Engineers or the Pennsylvania Department of Commerce, Bureau of Technological Development. Winners in each category are entered in the National Society of Professional Engineers' competition.

Correspondence courses

UNIVERSITY PARK Penn State is offering correspondence courses in the following areas

• Fundamentals of management Covers topics like expansion, upgrading and new land purchases The eight-part course is available for $7 50.

• Plant life. A ten-part course designed to introduce the fundamentals of botany Cost is $9.

• Commercial Fruit Growing for the commercial fruit grower, this course, which costs $10.75, covers location, planting, soil management, pruning, packing and marketing.

• Diseases and Insect Problems in the Commercial Orchard. Available at a cost of $5.25, this course concerns disease and insect problems in orchard management.

• Home Garden Fruits. This course covers underlying principles of fruit culture, soil treatment and fertilization, pruning, harvesting, diseases and insects and storage. It costs $6.75.

To order, indicate the identity of the course, and mail a check (made out to Penn State) to Correspondence Courses, Department 5000, University Park, PA 16802

SCS says plan erosion control now

CREAMERY – "Conservation planning can not only provide solutions to erosion problems on farms, but can also, in many cases, help improve efficiency and long term production," says Edward J. Brzostek, District Conservationist for the Soil Conservation Service (SCS) in Montgomery County.

Brzostek quotes the example of where a farmer doesn't realize the seriousness of the erosion problems on his farm. He may have a series of fields adjacent to each other being farmed up and down the hill. This is done because the hedgerows run that way. If the farmer were to farm on the contour, the hedgerows would cause the farmer to lose much time in turning his equipment around. In an effort to use time more efficiently, the farmer has incorrectly farmed up and down the hill, subjecting the field to increased erosion.

In this case, conservation planning would suggest hedgerow removal to allow the farmer to farm on the contour and still retain or increase efficiency, while greatly reducing soil erosion.

Brzostek points out, "When soil is leaving a field, so are valuable nutrients, and the most important part, the topsoil It is hard to believe how much soil can leave a field before a producer realizes the loss. Unfortunately, many fields in Montgomery County are already down to bedrock. '

"On an 8 percent slope, 400 feet long, being farmed up and down, soil losses can be up to 50 tons per acre per year. Contouring and terracing, or stripcropping, can bring these losses down to less than 3 tons per acre per year."

Brzostek further added, 'Farming up and down the hill doesn't always result in gully formation. However, a severe sheet erosion problem may exist, causing erosion over the entire field. A farmer may not realize this soil loss problem until he actually begins to plow up bedrock."

Conservation planning in all fields is not always clear cut; this is where an SCS conservation planner can really help a farmer or landowner. From many years of experience, SCS has learned just what might be the best alternatives to fit your individual situation.

While the crops are off the fields, now is the ideal time to get ideas on your farm. Currently cost-sharing on most conservation practices is still available at the County ASCS Office. Many practices, like stripcropping with hedgerow removal, no-till, diversions, waterways and terraces, are available. Most structural practices also allow subsurface drainage as a component

In most instances, SCS can schedule to meet with you at your farm and look over your fields to give you the best alternatives for your operation

Soil in this Montgomery County field has eroded down to bedrock, greatly reducing future crop production.

Advance payments requested for ailing farmers

WASHINGTON, D.C. – The chief executive officer of a major marketing cooperative has called for advancing target price and land diversion payments to farmers enrolled in this year's acreage reduction programs.

William R. Allen, executive vice president and general manager of Union Equity Co-operative Exchange, which serves 200,000 wheat producers in eight states, said such a move would have an immediate effect on providing additional cash flow to producers, while at the same time reducing their current borrowing requirements.

Testifying for the National Council of Farmer Cooperatives before the House Conservation and Credit Subcommittee, Allen said the most pressing concern is obtaining adequate credit for this year's crop.

He added we were very much encouraged by the Administration's announcement of initiatives aimed at helping financially stressed farmers But, Allen said, additional measures may be needed to provide for a sound restructuring of existing farm debt to meet the needs of borrowers and lenders alike

Allen noted that land values dropped 23 percent nationwide during the last three years. "Measured in dollar terms," he said, "the decline in land values translates into a loss of some $150 billion in farmers' equity."

The cooperative executive stated that we should be concerned not only about the current situation in agriculture, but also about its long-term impact. "Any further deterioration could have a ripple effect not only across rural America, but throughout the entire economy," he added.

Allen said that in some areas of the counry, the ripple effect has spread from farmers to small businesses, lending institutions, and rural communities. He noted the impact is heightened by the fact that agriculture accounts for over one-fifth of the Gross National Product (GNP) and over 20 percent of the nation's total workforce.

On a concluding note, Allen said that no solution in the short term is going to prove satisfactory unless it is aimed at restoring profitability to agriculture in the long term

Delawareans eligible for cash prizes

NEWARK, Del. — Find out how much you know about dairy cows by entering the 1985 Hoard's Dairyman dairy judging contest. In this armchair-style competition, adults and children evaluate the cows pictured in the most recent issues of Hoard's Dairyman magazine.

To encourage Delawareans to participate, the University of Delaware Cooperative Extension Service and Delaware Holstein Association will award prizes to the highest-scoring 4-H member, FFA member, 4-H club, FFA chapter, family, couple and individual in the state. The competition is open to all Delaware residents.

Entry blanks and contest pictures are available free from county extension offices in Newark, Dover and Georgetown, and from high school vocational agriculture departments.

To enter the statewide competition, send entries by March 15 to: Extension Dairy Specialist George Haenlein, 048 Townsend Hall, Newark, DE 19717-1303. He will record and then forward them to the national competition by the March 20 deadline.

Winners will be announced by May 15. Prizes will be awarded July 24 at the Delaware State Fair.

Are you winning the profit struggle?

Master Mix can help make sure you do.

Get Master Mix... and more to boot!
Ask your participating Master Mix Dealer how you can earn both a free pair of high quality Wolverine® boots and free Potency Formulated starter feed.

Thanks For All The Interest You Showed Us At The PORK CONGRESS.

We're Sure These Feeds Will Increase Your Bottom-Line Profits.

Master Mix is anxious to show you how improved feed conversion and increased average daily gain can help you produce more pork per ton of feed and get lower fixed costs per pound of pork marketed.

We can help you generate more profit with your hog operation with our new line of high performance Potency Formulated feeds developed by Master Mix Research. Potency Formulated feeds are available for all phases of pork production and supply the highest levels of useable amino acids and energy to give you top performance and profits in your operation

See your Master Mix Dealer today for more information about Potency Formulated feeds and learn how you can win the profit struggle.

Master Mix® CENTRAL SOYA

Get Master Mix...and More to Boot!

From February 1 through April 30, 1985, your participating Master Mix dealer has an offer you won't want to miss. You can earn both free Potency Formulated started feeds and a free pair of high quality Woverine® work boots.

Here's how...
For every half ton of Potency Formulated Premawean or Premapig starter feeds you purchase, we'll give you another 50 pounds free. That's right, buy 1,000 pounds and you get 50 pounds to boot!

But that's not all...
While you're buying Potency Formulated starter feeds you'll also be earning Master Mix "Boot Bucks." And when you've got $75 worth of Boot Bucks, you can walk away with a free pair of high quality Wolverine work boots.

Oglevee, Conrad-Pyle win state research grants

HARRISBURG — Two agribusinesses are among 17 state companies approved to receive state grants for the second annual funding of the Ben Frankliin Partnership Small Business Research Seed Grant Program, according to state Agriculture Secretary Penrose Hallowell.

Hallowell said Olgevee Associates, Inc. of Connellsville, Fayette County, and the Conard-Pyle Co. of West Grove, Chester County were approved by the Ben Franklin Partnership Board from 140 companies which competed for $550,000 in grants to a maximum of $35,000 per firm.

During the first round of program funding, nine projects had received state grants totaling $311,730, including Presque Isle Wine Cellars. The research grant program was announced in early 1983 by Gov. Dick Thornburgh to encourage high quality research by small businesses in employment fields identified as having the greatest economic growth potential.

Oglevee Associates, Inc. will receive a $35,000 grant for its work investigating conditions which lead to Botrytis blight in greenhouse operations and seeking to develop computer software to predict such problems and control greenhouse environments. The Conard-Pyle Co. will receive a $33,153 grant which will be used to introduce new variety of potted miniatures roses to the American flower market.

"Agriculture has always been a major force in development of new ideas, machinery and technology," Hallowell said. "These companies are representative of today's agricultural industries, which continue to focus on the future, while producing jobs for an expanding number of Pennsylvanians each year."

The seed grant of Presque Isle Wine Cellars is being used on behalf of the state's wine industry to develop scientific tests for processing and quality control of wine making.

Guidelines formulated by the Ben Franklin Partnership Board of the program required that proposals focus on nine areas including agriculture. To apply for funding under the program, a business must employ fewer than 250 persons, with a preference for companies with fewer than 50 workers

Applications were evaluated on their technical merits, potential for job creation, the firms linkage with the existing program, and ability to continue commercialization of the research and development at the completion of the state grant.

KEEPING AMERICA ON THE GROW

Extension volunteers are valuable resource

UNIVERSITY PARK — If communities had to pay for the services provided by volunteers working with the Cooperative Extension Service, they would have to spend more than $4.5 billion a year nationally.

In fact, the dollar value of volunteer time is over five times greater than the entire Cooperative Extension Service budget, according to preliminary findings of a national study.

Extension Service programs operate in almost every county of the United States through the cooperative efforts of the U.S. Department of Agriculture, land-grand universities and county governing bodies in all 50 states and the territories. All county Extension agents work with volunteers.

The study, funded by USDA, is examining the benefit and impact of volunteers working with Cooperative Extension Service agents.

The study indicates that approximately one in 80 Americans served as a volunteer in an activity with Extension. During 1983, almost 3 million volunteers spent more than 71 million days on such activities, or 51 days for every day of assistance given by an Extension staff member.

Three-fourths of the volunteers were active in Extension 4-H, home economics, agricultural or community development programs, were Extension Master Volunteers, or worked with county agents on special community efforts such as flood disaster relief, farm-city tours, finger-printing children, or fairs and events. Another fourth were volunteers from other community agencies or organizations, or individuals independent of any agency or organization.

The study found that more than 2.8 million volunteers helped to disseminate agriculture, home economics, community or youth development information from USDA or land-grant universities, reaching more than 48.7 million people. The topics included food for fitness, seed selection, weed and insect control, and consumer buying.

Although the study found some differences among counties and some unique activities, there was considerable consistency across the United States. The 315 counties in the study were a sample stratified by population. There was at least one county from all 50 states. Urban centers like San Francisco, Denver, St. Louis and New York City were included along with counties with fewer than 1,000 people.

The number of volunteers reported per county ranged from 39 to 18,000 with an average of 615.

In the study's next phase, researchers will interview 1,200 volunteers from the sample counties about their volunteer activities. They also will ask about the good and bad effects of their experience.

Who's determining farm policy?

NEWARK, Del. – Throughout the history of federal farm programs, farmers usually have been the ones to set U.S. agricultural policy...until recently. How much influence are they likely to have over the 1985 Farm Bill now being put together in Washington?

"Other interests began to gain influence on farm policy in the 1960s and now may control it," says University of Delaware extension farm policy specialist Gerald F. Vaughn. He is convinced that farmers on the Delmarva peninsula and nationwide will need to work hard to make sure they have a voice in shaping any current legislation.

"Farmers can't sit back and assume that national farm organizations alone can represent them. More than ever, farmers need to personally understand farm bill issues and communicate their views to Washington," the economist says.

Some competing interests, though now farmers, are part of the total agricultural industry. Others are outside agriculture altogether. "Farming's links and interdependence with the rest of the economy are never more clear than in disputes over farm policy," Vaughn says.

Those who speak for farmers now find it necessary to compromise with representatives of suppliers (such as dealers in grain, feed, seed, farm equipment, fertilizer and chemicals); banks; commodity dealers and exporters; food processors and distributors; consumer groups; anti-hunger, nutrition, and welfare rights groups; environmentalists; labor; and the clergy. The evolution in the farm bill's title, from Agricultural Adjustment Act of 1933 to Agriculture and Food Act of 1981, reflects some of this change.

"Farm suppliers are dependent on crop acreage and farm income," Vaughn says. "When large production cutbacks occur, such as those associated with PIK, many suppliers can be expected to feel the crunch."

Banks, he says, can be expected to favor policy that maintains or increases the value of farmland, which is the asset securing many farm loans. Banks have opposed giving farmers priority in the distribution of grain from bankrupt elevators.

Commodity dealers and exporters rely on volume of farm products, hence they oppose cutbacks. Grain exporters and the soybean crushing industry have had substantial excess capacity. The maritime industry comes into the picture, too, by pressing for guaranteed shipping rights for a portion of U.S. cargo.

"The interests of food processors and distributors are in basic conflict with those of farmers," the economist says. "Food companies want low-priced raw products; farmers feel they need higher prices for their crops. Fast food outlets, for example, want less expensive imported meat; U.S. livestock producers want to restrict imports. Pizza makers want less expensive imitation cheese; dairy farmers oppose using it."

Consumer groups want food prices to be as low as possible, while being assured of abundant and stable supplies of wholesome foods in wide variety. Consumer groups resist changes in food grading systems perceived as not in the consumer's interest. Consumer groups press for changes in milk marketing order rules to permit commercial reconstitution of milk.

"Anti-hunger, nutrition, and welfare rights groups, often joined by consumer and labor groups and the clergy, are strong supporters of food stamp and nutrition programs," the specialist continues. "Farm groups support these programs, and in return the urban interests support commodity programs sought by farmers."

Among their various objectives, environmentalists seek to preserve farmland, reduce soil erosion and the water pollution it causes, portect wildlife, and reduce the use of pesticides. Vaughn says environmentalists were especially pleased that several of their proposals were worked into the 1981 farm bill.

In addition to all these competing interests, there are inherent conflicts between producer groups. "Livestock and poultry producers like feed prices kept as low as possible, while growers of feed grains and soybeans want high prices. Milk producers can't agree on a plan to reduce the dairy surplus--midwestern dairymen wanted a base plan while southern dairymen wanted the support price lowered. And high income farmers see the need for government assistance differently than lower income farmers do," the economist says.

Then there are conflicts between government agencies. "One example," Vaughn says, "is the Office of Management and Budget's desire to reduce the cost of farm programs faster than the Secretary of Agriculture feels is wise. Another is the Department of Commerce's resistance to restrictions on food imports that compete with domestic production."

These diverse interests have become increasingly well organized, well financed, and skilled in influencing farm policy. As a result, says Vaughn, it has become harder for the Secretary of Agriculture and even Congress to balance all their demands. More farm policy decisions now are made at the White House.

"With reduction of the federal budget deficit a paramount concern of both the administration and Congress, it seems inevitable that the President will play an increasing role in setting farm policy," Vaughn concludes.

Delaware sets field corn pest control program

NEWARK, Del. – Field corn producers spend most of their time making marketing and management decisions which prevent them from scouting their fields on a regular basis. An organized pest management program can help growers become more efficient in their pest control, improve their production practices and maximize profits.

During the 1983 and 1984 growing seasons, the Delaware Cooperative Extension Service conducted a field corn pest management program on 2,000 acres. Field scouting began in late March and continued on a weekly basis through August. Information on insect activity, weed outbreaks, disease infestations, plant stand counts, and fertility problems was collected by scouts and then reported to participating growers for use in making pest control decisions.

"Results of this two-year program indicate that participating growers were able to save money on insecticide sprays and improve their pest control practices," says University of Delaware extension pest management specialist Joanne Whalen. Major accomplishments of this program included:

* Savings of approximately $10 per acre from reduced use of soil insecticides on 30 percent of the acreage in the program.

* Savings of $6 per acre on insecticide sprays for European corn borer control on 25 percent of the scouted acreage.

* Development of maps of the location and abundance of perennial problem weeds such as Canada thistle and johnsongrass on the 2,000 acres involved in the program.

* Improved fertility in 1984 where leaf tissue samples were taken on 20 percent of the scouted acreage.

In 1985, the Delaware Cooperative Extension Service would again like to offer this field corn pest management program to any grower interested in participating. According to Whalen, two different options will be offered in order to fulfill individual needs:

Total Crop Management - This program will include weekly insect, weed and disease scouting services. Plant population counts, soil and leaf tissue sampling, and weed mapping will also be done. Growers will be asked to pay for the fertility tests. The fee will be $3 per acre.

Insect and Weed Scouting - This program will provide only pest scouting for insects and weeds. Weed mapping will also be done. The fee will be $2 per acre.

Growers wishing to participate in either program should contact Whalen at (302) 451-2526.

Tye announces equipment

LOCKNEY, Tx. – Tye announces the newest in their full line of planting and seeding equipment, the Tye Meadow Seeder. The Meadow Seeder with a 7' planting width is an economical alternative to broadcast seeding for pastures, meadows, hayfields, and specialty needs.

The Meadow Seeder comes equipped with two separate seed hoppers, flexible Danish tine openers and 3-point hitch. The small grain hopper is equipped with Tye's internally fluted seeders for accurate and dependable metering of tye, ryegrass, oats, barley, wheat, grasses, and other. The legume hopper has externally fluted seeders designed for precision metering of small expensive seeds such as alfalfa and clover.

The Meadow Seeder is another innovation from Tye, the company which developed the first 3-point grain drill and the Pasture Pleaser, the first successful pasture renovation drill.

For more information, see your nearest Tye dealer or call or write The Tye Company, Box 218, Lockney, TX 79241, (806) 652-3367.

HAVING SOIL PROBLEMS?
Here's A Timely Tip...

Apply lime on frozen ground

Lime can be applied almost anytime, however winter months are ideal, because the ground is firm and the freezing and thawing action helps to disseminate the lime in the soil

COMPLETE CATTLE & MACHINERY DISPERSAL

JAMES & ALICE SMITH

Telephone Road, East Freetown, N.Y.
Phone 607-863-3452

TUESDAY, FEB. 26, 1985

10 A.M. Sharp

Having decided to discontinue farming, Mr. & Mrs. James Smith have commissioned Empire Livestock to sell their cattle and machinery at the farm located on Telephone Road, 3 miles northwest of Cincinnatus and about 12 miles southeast of Cortland. From Cortland take Route 41 south to Telephone Road. Watch for auction arrows.

210 HI-GRADE HOLSTEIN CATTLE 210
6 TRACTORS 6, MACHINERY

Manager's Note: This is an excellent opportunity to purchase good young cattle from a real production dairy. More detailed cattle information at ring side. All cattle have had necessary shots plus vet examination. This is a very clean line of machinery in excellent repair and condition — ready to go to work in the fields any day. Anyone knowing Jimmy is aware of the way he cared for his cattle and machinery.

Sale Order: Miscellaneous items, machinery and cattle last.

Friends, neighbors, farmers and dealers make plans to attend this outstanding sale starting promptly at 10 A.M. on Tuesday, February 26, 1985.

TERMS: Cash or 1-way check, with I.D. day of sale.

Lunch available all day.
